# BIBLIOGRAPHY ON COLD REGIONS SCIENCE AND TECHNOLOGY

## Volume 33, 1979

### INTRODUCTION

The *Bibliography on Cold Regions Science and Technology*, CRREL Report 12, was first published in 1951 and is a continuing publication of the Cold Regions Bibliography Project in the Science and Technology Division of the Library of Congress. It is sponsored by and prepared for the Cold Regions Research and Engineering Laboratory (formerly Snow, Ice and Permafrost Research Establishment) of the U.S. Army Corps of Engineers. Volumes 1-15 were issued as the *Bibliography on Snow, Ice and Permafrost*, SIPRE Report 12. Beginning with volume 16 the designation was changed to CRREL Report 12. With volume 20 the title was changed to *Bibliography on Snow, Ice and Frozen Ground, with Abstracts*, and with volume 23 the current title was adopted.

The present volume contains material accessioned between October 1978 and September 1979. It contains the full citation of 4770 items, in many cases with abstracts. Pt. 2 is an index section divided into author and subject indexes. In the author index principal and joint personal and corporate authors are listed along with the title, date, pagination, and language of the document and the accession number. The subject index is composed of three basic elements: (1) terms taken from a controlled vocabulary based on the *Thesaurus of Engineering and Scientific Terms* (LEX-E JC), (2) free terms added as needed, (3) geographic names, generally entered under countries. The terms are listed in a single alphabetical arrangement, along with title (original, translated, abridged, expanded, or supplied), principal author, date, pagination, and language of pertinent documents, and their accession numbers.

This publication is the result of a coordinated effort. The bibliographic work was done by the Cold Regions Bibliography Project Staff who entered all data on a single computerized data base that accommodates both the *Bibliography on Cold Regions Science and Technology* and the *Antarctic Bibliography*, thus eliminating duplication of effort between the two bibliographies. The data processing, based on MARC II input, was directed by Myron W. Phillips of the Science and Technology Division in cooperation with the Library's Information Systems Office. The photocomposition program for this volume was written by Joyce L. Owens.

- 33-1  
Microwave transmission from sea ice. Parashar, S.K., Helsinki. University of Technology. Radio Laboratory. Report, 1976, S-90, 19p. N78-11292.  
Sea ice, Microwaves, Radiometry.
- 33-2  
Catalog of the ice-damming and ice-jam areas on rivers of the USSR. Vol.2. The Asiatic part of the USSR. (Katalog zatonykh i zashornykh uchastkov rek SSSR. Tom 2. Aziatskaia chast' SSSR), Sokolov, A.A., ed, Leningrad, Gidrometeoizdat, 1976, 288p., In Russian.  
River ice, Icebound rivers, Ice breakup, Ice jams, Ice forecasting, Ice reporting, Maps, Aerial reconnaissance, Ice conditions.
- 33-3  
Dielectric properties of sea ice at microwave frequencies. Hallikainen, M., Helsinki. University of Technology. Radio Laboratory. Report, 1977, S-94, 55p. N78-11293.  
Sea ice, Brines, Temperature effects, Ice dielectrics, Microwaves, Radiometry.
- 33-4  
Application of Landsat imagery for snow mapping in Norway—final report, 16 May 1975-27 Aug. 1976. Odegaard, H., et al, U.S. National Aeronautic and Space Administration. Contractor report, May 25, 1977, NASA CR-155341, 29p. N78-14458.  
Skorve, J.E.  
Remote sensing, Spaceborne photography, Snow cover, Mapping.
- 33-5  
Regularities governing the distribution of snow-ice cover thickness in Arctic seas. (Nekotorye zakonomernosti raspredeleniia tolshchiny snezhno-ledianogo pokrova v arkticheskikh moriakh), Buzuev, A.I.A., et al, *Meteorologiya i gidrologiya*, Mar. 1978, No.3, p.54-60, In Russian with English summary. 16 refs.  
Dubovtsev, V.F.  
Drift, Sea ice, Ice navigation, Ice cover thickness, Snow cover distribution, Ice surface, Surface structure, Arctic Ocean.
- 33-6  
Hummocking of floating ice in the open water parts of Azov Sea. (Torosistost' plavuchego l'da v otkrytykh chastiakh Azovskogo moria), Siniurin, I.U.N., *Meteorologiya i gidrologiya*, Mar. 1978, No.3, p.99-103, In Russian. 5 refs.  
Sea ice, Pressure ridges, Ice navigation, Icebreakers, USSR—Azov Sea.
- 33-7  
Ice resistance to shear stresses. (O soprotivlenii l'da srezu), Kozitskii, I.E., *Meteorologiya i gidrologiya*, Mar. 1978, No.3, p.103-105, In Russian. 4 refs.  
Ice physics, Ice strength, Shear strength, Tests.
- 33-8  
Possibilities of the radiohydroacoustic technique of studying ice processes on rivers. (Vozmozhnosti radiohidroakusticheskogo metoda issledovaniia ledovykh protsessov na rekakh), Bogorodskii, V.V., et al, *Meteorologiya i gidrologiya*, Feb. 1978, No.2, p.60-65, In Russian with English summary. 10 refs.  
Gavrilov, V.P., Nikitin, V.A., Sukhorukov, K.K.  
River ice, Ice formation, Icebound rivers, Ice breakup, Ice melting, Ice forecasting, Acoustic measuring instruments.
- 33-9  
Determining cohesive forces and compressive strength of snow cover. (Ob opredelenii sil stsepleniia i soprotivleniia szhatiui snezhnogo pokrova), Korolev, A.I., *Meteorologiya i gidrologiya*, Feb. 1978, No.2, p.72-76, In Russian with English summary. 9 refs.  
Avalanches, Snow strength, Snow cover distribution, Snow compaction, Baykal Amur railroad, Cohesion, Compressive strength.
- 33-10  
Forecasting warm (snowy) and cold (snow-sparse) winters and the survival of winter crops. (Prognoz teplykh mnogosnezhnykh i kholodnykh malosnezhnykh zim i perezimovki ozimnykh kul'tur), Popov, A.V., et al, *Meteorologiya i gidrologiya*, Feb. 1978, No.2, p.77-82, In Russian with English summary. 4 refs.  
Moiselchik, V.A.  
Weather forecasting, Long range forecasting, Precipitation (meteorology), Snow accumulation, Plant physiology, Frost resistance.
- 33-11  
Determining freezing depth of soils in Ural Mountains and West Siberia for construction purposes. (Opredelenie glubiny promerzaniia pochv Urala i Zapadnoi Sibiri v stroitel'nykh tseliakh), Vostretsov, O.K., *Meteorologiya i gidrologiya*, Jan. 1978, No. 1, p.80-85, In Russian with English summary. 2 refs.  
Soil freezing, Frost penetration, Soil temperature, Snow cover effect, USSR—Ural Mountains.
- 33-12  
Analyzing power balance of cutter-bar excavators. (Analiz balansha moshchnosti barovykh zemleraznykh mashin), Iudin, V.G., et al, *Torfaiaia promyshlennost'*, Feb. 1978, No.2, p.11-13, In Russian. 5 refs.  
Emel'ianov, V.A., Kutuzov, I.U.M.  
Swamps, Cold weather construction, Earthwork, Pests, Excavating equipment, Frozen ground.
- 33-13  
Microalgae of Elbrus region glaciers. (O mikrovdorosliakh lednikov Prielbrus'ia), Polivoda, A.I., et al, *Moscow. Universitet. Vestnik. Seria 16 Biologiya*, Jan-Mar. 1978, No.1, p.3-12, In Russian with English summary. 13 refs.  
Mountain glaciers, Glacier ice, Microbiology, Algae, USSR—Elbrus Mountain.
- 33-14  
Land reclamation map of the non-chernozem zone of European Russia. Its contents and the principles used in its compilation. (Landshaftno-meliorativnaia karta nechernozemnoi zony RSFSR, ee soderzhanie i printsipy sostavleniia), Liubushkina, S.G., et al, *Moscow. Universitet. Vestnik. Seria 5 Geografiia*, Jan-Feb. 1978, No.1, p.34-41, In Russian with English summary.  
Pashkang, K.V., Rakovskia, E.M.  
Soil mapping, Podsol, Moraines, Arctic soils, Taiga soils, Tundra soils, Land reclamation, Maps, Landscape types, Economic development.
- 33-15  
Gully erosion in the non-chernozem zone of European Russia. (Ovrazhniia eroziia v nechernozemnoi zone evropeiskoi chasti RSFSR), Kosov, B.F., *Moscow. Universitet. Vestnik. Seria 5 Geografiia*, Jan-Feb. 1978, No.1, p.54-59, In Russian with English summary. 17 refs.  
Cryogenic soils, Soil erosion, Gullies, Permafrost weathering, Human factors.
- 33-16  
Peculiarities of operating submarines in ice- and subglacial navigation. (Osobennosti upravleniia podvodnoi lodkoj pri plavanii vo l'dakh i podo l'dom), Sverbilov, Zh., *Morskoi sbornik*, Jan. 1978, No.1, p.46-49, In Russian.  
Military transportation, Submarines, Ice navigation, Subglacial navigation.
- 33-17  
Handling large piles of snow-covered tailings on mountain slopes. (Osobennosti ekspluatatsii vysokikh zasnezhennykh otvalov na gornnykh sklonakh), Fisenko, G.L., et al, *Gornyi zhurnal*, Jan. 1978, No.1, p.25-28, In Russian. 7 refs.  
Gushchin, V.V., Krasnosel'skii, E.B.  
Mining, Tailings, Slope stability, Frost penetration, Snow cover effect.
- 33-18  
Peculiarities of drilling-and-blasting at the BAM construction sites. (Burovzryvnye raboty na BAME i ikh osobennosti), Podkaliuk, V.P., et al, *Gornyi zhurnal*, Jan. 1978, No.1, p.42-44, In Russian. 2 refs.  
Brodov, E.I.U., Basistov, M.A.  
Rock drilling, Blasting, Baykal Amur railroad, Permafrost.
- 33-19  
Reforestation in the non-chernozem zone of the RSFSR. (Lesovosstanovlenie v nechernozemnoi zone RSFSR), Kazimirov, N.I., *Lesnoe khoziaistvo*, 1978, No.3, p.15-20, In Russian. 17 refs.  
Taiga soils, Taiga vegetation, Revegetation, Podsol.
- 33-20  
Reforestation of clearings in pine forests of the Tom'-Ob' interfluv. (Lesovosstanovlenie sosnovykh vyrobok v Tom'-Ob'skom mezhdurech'e), Dorokhin, A.N., *Lesnoe khoziaistvo*, 1978, No.4, p.31-36, In Russian. 11 refs.  
Taiga vegetation, Taiga soils, Revegetation.
- 33-21  
Preventing freezeup of air heating units. (Bor'ba s zamerzaniem kaloriferov), Mikhailov, S.A., *Vodosnabzhenie i sanitarnaia tekhnika*, 1978, No.3, p.16-20, In Russian.  
Arctic climate, Mining, Ventilation, Air temperature, Heating, Water pipes, Ice formation, Countermeasures.
- 33-22  
Timber transport over partially iced rivers. (Rabota v usloviakh naledej), Kukolevskii, G.A., et al, *Lesnaia promyshlennost'*, 1978, No.3, p.14, In Russian.  
Velishchanskii, M.A.  
Forestry, Transportation, Icing, Naleds, Countermeasures.
- 33-23  
Under low temperature conditions. (V usloviakh nizkikh temperatur), Razin, A., *Tekhnika i vooruzhenie*, Jan. 1978, No.1, p.30-31, In Russian.  
Military transportation, Motor vehicles, Cold weather operation, Engine starters, Winter maintenance.
- 33-24  
Winter maintenance of military motor vehicles. (Ob sluzhivanie avtomobilov zimoi), Ermakov, V., *Tekhnika i vooruzhenie*, Jan. 1978, No.1, p.32-33, In Russian.  
Military transportation, Motor vehicles, Winter maintenance.
- 33-25  
Allowing for winter conditions. (Uchityvaia zimnie uslovia), Borisov, V., et al, *Tekhnika i vooruzhenie*, Mar. 1978, No.3, p.28, In Russian.  
Gludin, V.  
Military transportation, Military equipment, Military operation, Gas troops, Cold weather operation.
- 33-26  
Winter maintenance of tanks. (Ukhod za bronetransporterami zimoi), Tsvetkov, N., *Tekhnika i vooruzhenie*, Mar. 1978, No.3, p.30-31, In Russian.  
Military transportation, Tanks (combat vehicles), Winter maintenance.
- 33-27  
Light-weight wall structures for BAM. (Legkie stenovye konstruksii dlia BAMA), Liubinskii, M.S., *Zhilishchnoe stroitel'stvo*, Apr. 1978, No.4, p.21, In Russian.  
Buildings, Walls, Prefabrication, Panels, Thermal insulation, Permafrost beneath buildings, Baykal Amur railroad.
- 33-28  
Is the "frozen masonry technique" necessary. (Nuzhen li "metod zamorazhivaniia kladki"), Ovcharov, V.I., *Zhilishchnoe stroitel'stvo*, Mar. 1978, No.3, p.17-18, In Russian.  
Masonry, Bricks, Mortars, Admixtures, Antifreezes, Cold weather construction.
- 33-29  
Studying thermal and moisture regimes of kindergarten buildings in the Far North. (Issledovaniia temperaturno-vlazhnostnogo rezhima detskogo sada-iashel na Krafnem Severe), Pikhovkin, V.A., et al, *Zhilishchnoe stroitel'stvo*, Mar. 1978, No.3, p.22-23, In Russian.  
Shkharov, N.D.  
Buildings, Permafrost beneath buildings, Humidity, Thermal regime.
- 33-30  
High rating of the experimental trip of "Arktika". (Vysokaia otsenka eksperimental'nogo reisa "Arktiki"), Zemlia i vseleeniia, Jan-Feb. 1978, No.1, p.2-3, In Russian.  
Ice navigation, Icebreakers, Arctic Ocean.

- 33-31  
Using nonwoven synthetic materials for improving water-thermal regime of roadbeds. (Uluchshenie vodno-teplovogo rezhima zemliannogo polotna primeneniem netkanykh sinteticheskikh materialov). Ruvinskii, V.I., et al, *Avtomobil'nye dorogi*, Dec. 1977, No.12, p.6-8, In Russian.  
Zubkova, V.I., Nikanorov, I.U.A., Cherniav, S.V. Roads, Roadbeds, Thermal insulation, Waterproofing, Frost heave, Construction materials.
- 33-32  
Excavation of hard rocks with tractor-mounted rippers. (Razrushenie prochnykh gruntov navesnym rykhlytelem). Piterina, N.V., *Avtomobil'nye dorogi*, Jan. 1978, No.1, p.12-13, In Russian.  
Earthwork, Excavating equipment, Frozen ground.
- 33-33  
Assembly for rapid control of concrete frost resistance. (Ustanovka dlia operativnogo kontrolya morozostokosti betona). Leshchinskii, M.I.U., et al, *Avtomobil'nye dorogi*, Jan. 1978, No.1, p.18-19, In Russian. 1 ref.  
Popov, V.N., Dashchinskii, A.I.A., Voloshenjuk, P.G. Roads, Concrete, Concrete freezing, Frost resistance, Test equipment.
- 33-34  
Nomogram for calculating cooling rate of bituminous concrete layers. (Nomogramma dlia rascheta okhlazhdeniia asfal'tobetonnykh sloev). Shestakov, V.N., et al, *Avtomobil'nye dorogi*, Jan. 1978, No.1, p.22, In Russian.  
Shestakov, A.N. Bituminous concretes, Concrete freezing, Cooling rate, Charts.
- 33-35  
Building roadbeds on permafrost along gas pipelines. (Osobennosti vozvedeniia zemliannogo polotna dorog vdol' gazoprovodov na vechnomerzlykh gruntakh). Plotnik, A.S., et al, *Avtomobil'nye dorogi*, Feb. 1978, No.2, p.7-8, In Russian. 1 ref.  
Golenko, N.A., Naumov, V.G. Roads, Roadbeds, Permafrost beneath roads, Peat, Tundra soils, Forest tundra, Taiga soils, Ground ice.
- 33-36  
Roadbeds built on slopes under complicated permafrost conditions. (Zemliannoe polotno na kosogore v slozhnykh merzlotno-gruntovykh usloviakh). Iurkov, F.Kh., *Avtomobil'nye dorogi*, Feb. 1978, No.2, p.9-10, In Russian. 2 refs.  
Roads, Roadbeds, Slope processes, Permafrost beneath roads, Slope stability.
- 33-37  
Using salt in preventing naled formation. (Primenenie soli pri bor'be s naleidami). Turgunbaev, A., *Avtomobil'nye dorogi*, Feb. 1978, No.2, p.20, In Russian.  
Roads, Roadbeds, Frost heave, Naleds, Countermeasures.
- 33-38  
Forecasting permafrost conditions for road design in the North. (Merzlotnyi prognoz pri proektirovanii dorog na Severe). Savko, N.F., *Avtomobil'nye dorogi*, Oct. 1977, No.11, p.5-7, In Russian. 3 refs.  
Roads, Roadbeds, Embankments, Permafrost beneath roads, Permafrost forecasting.
- 33-39  
Research and design of roads on swamps. (Iz'yskanie i proektirovanie avtomobil'noi dorogi na болоakh). Braslavskii, V.D., et al, *Avtomobil'nye dorogi*, Oct. 1977, No.10, p.8-9, In Russian.  
Agapkin, I.U.M. Swamps, Roads, Peat, Embankments, Bearing strength, Design.
- 33-40  
Testing bending strength of concrete elements at low temperatures. (Ispytanie izgibaemykh elementov, podvergnutykh vozdetsviu nizkikh temperatur). Mladova, I.R., et al, *Beton i zhelezobeton*, Feb. 1978, No.2, p.12-13, In Russian. 2 refs.  
Concrete structures, Reinforced concrete, Tanks (containers), Liquefied gases, Concrete strength, Frost resistance, Low temperature tests.
- 33-41  
Frost resistance of prestressed haydite concrete under transient load. (Morozostokost' keramzitobetona pri obzhatii kratkovremennoi nagruzkoj). Ivanov, I.A., et al, *Beton i zhelezobeton*, Oct. 1977, No.10, p.37-40, In Russian. 3 refs.  
Guchkin, I.S. Prestressed concrete, Lightweight concretes, Cements, Frost resistance, Compressive strength, Low temperature tests.
- 33-42  
Firm and ice of the Swiss Alps; glacier inventory. Supplement: list of photographs. (Firm und Eis der Schweizer Alpen; Gletscherinventar. Ergänzungsband: Fotoliste). Müller, F., et al, *Zurich. Eidgenössische Technische Hochschule. Geographisches Institut. Publikation*, 1976, No.57a, c50p., In German. For the inventory see 32-2700.

Antarctic ice charts 1975-76.  
U.S. Navy. Fleet Weather Facility, Suitland, Maryland, (1977), 434p.  
Sea ice distribution, Meteorological factors.  
The advent of high resolution satellite imagery combined with the ground truth of conventional observations has only recently provided description of the polar ice fields on a semi-synoptic scale. Since 1970, the fleet weather facility has prepared operational analyses of sea ice conditions in the Antarctic. The charts were constructed by Navy ice analysts under operational time constraints from satellite imagery and conventional data. Reanalysis with late data was not normally attempted; rather, the current analysis was prepared, incorporating this to the extent possible. The analysis was compared with available climatology in an attempt to eliminate gross errors.

Frozen gravel, Alluvium, Frost penetration, Ground ice, Ice formation, Snow cover effect, Ice veins, Patterned ground, Swamps.
- 33-110  
Baikal and Transbaikalian types of permafrost in depressions.  
Koldysheva, R.I.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.131-133, For Russian original see 28-1049. 4 refs.  
DLC GB641.16 1973a  
Permafrost distribution, Permafrost thickness, Active layer, Alpine land forms, Climatic factors, Topographic factors, USSR—Transbaikalia.
- 33-111  
Permafrost and landscape.  
Konstantinova, G.S., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.133-135, For Russian original see 28-1050. 8 refs.  
DLC GB641.16 1973a  
Cryogenic relief, Landscape development, Landscape types, Plant ecology, Vegetation factors.
- 33-112  
Effect of permafrost on the northern tree line.  
Kriuchkov, V.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.136-138, For Russian original see 28-1051. 3 refs.  
DLC GB641.16 1973a  
Tundra vegetation, Plant ecology, Permafrost thickness, Swamps.
- 33-113  
Special features in the emergence of cryolithogenesis in the lacustrine-alluvial deposits of the valleys of the small rivers in Central Yakutia.  
Kuznetsova, T.P., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.138-140, For Russian original see 28-1052.  
DLC GB641.16 1973a  
Permafrost distribution, Permafrost structure, Ground ice, Ice veins, Patterned ground, USSR—Yakutia.
- 33-114  
Multiwedge ice in the upper reaches of the Tatta River.  
Leonkin, E.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.140-142, For Russian original see 28-1053.  
Tkachenko, Z.I.  
DLC GB641.16 1973a  
Patterned ground, Polygons, Ice veins, Ice composition, Ice dating.
- 33-115  
Determination of the thickness of permafrost on the Arctic coast.  
Oberman, N.G., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.143-147, For Russian original see 28-1054. 18 refs.  
Kakunov, N.B.  
DLC GB641.16 1973a  
Geothermometry, Shores, Permafrost distribution, Permafrost thickness, Surveys.
- 33-116  
Morphotectonics and the study of the geothermal conditions of the permafrost zone.  
Piotrovskii, M.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.147-149, For Russian original see 28-1055. 5 refs.  
DLC GB641.16 1973a  
Permafrost origin, Geologic structures, Heat flux, Permafrost distribution, Tectonics.
- 33-117  
Zonally caused geomorphological characteristics of the contemporary river valleys and the flatland rivers of the Eastern Subarctic.  
Rozenbaum, G.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.149-150, For Russian original see 28-1056.  
DLC GB641.16 1973a  
Subarctic topography, Plains, Permafrost distribution, Valleys, Polygonal topography, Cryogenic processes.
- 33-118  
Principal laws governing the development of thermokarst in Eastern Siberia.  
Uvarkin, I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.150-152, For Russian original see 28-1057. 4 refs.  
Shamanova, I.I.  
DLC GB641.16 1973a  
Permafrost structure, Ground ice, Ice melting, Heat transfer, Thermokarst.
- 33-119  
Age of the permafrost in the Far Northeast of the USSR.  
Arkhangelov, A.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.155-159, For Russian original see 28-1058. 20 refs.  
Sher, A.V.  
DLC GB641.16 1973a  
Permafrost distribution, Permafrost dating, Paleoecology, Ice veins.
- 33-120  
Patterns of distribution and a quantitative estimate of the ground ice in the USSR.  
Vtiurin, B.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.159-164, For Russian original see 28-1059. 7 refs.  
DLC GB641.16 1973a  
Permafrost distribution, Permafrost structure, Frozen rock temperature, Permafrost thickness, Ground ice, Ice structure, Ice veins, Pingos, Cryogenic processes.
- 33-121  
Role of cryogenic factors in processes leading to the formation of placers in the coastal zone of the shelf of the Laptev Sea.  
Grigor'ev, N.F., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.165-167, For Russian original see 28-1060.  
DLC GB641.16 1973a  
Shore erosion, Permafrost distribution, Permafrost weathering, Ground ice, Ice veins, Placer mining, Laptev Sea.
- 33-122  
Position of cryolithogenesis in the overall scheme of polar lithogenesis.  
Danilov, I.D., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.167-171, For Russian original see 28-1061. 13 refs.  
DLC GB641.16 1973a  
Cryogenic processes, Quaternary deposits, Frost penetration, Compacting, Alluvium, Arctic regions, Thermal effects, Moisture factors, Petrogenesis.
- 33-123  
Permafrost-facies analysis as the main method of cryolithology.  
Katsanov, E.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.171-176, For Russian original see 28-1062. 16 refs.  
DLC GB641.16 1973a  
Permafrost structure, Lithology, Cryogenic processes, Cryogenic formations.
- 33-124  
Frost weathering.  
Konishchev, V.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.176-181, For Russian original see 28-1063. 18 refs.  
DLC GB641.16 1973a  
Frost shattering, Ice crystal growth, Freeze thaw cycles, Soil moisture migration, Clay minerals, Hydration.
- 33-125  
Cryolithogenesis.  
Popov, A.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.181-184, For Russian original see 28-1064. 4 refs.  
DLC GB641.16 1973a  
Geocryology, Terminology, Cryogenic processes, Classifications, Permafrost origin.
- 33-126  
Effect of neotectonic movements on formation of permafrost regions.  
Romanovskii, N.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.184-188, For Russian original see 28-1065. 21 refs.  
DLC GB641.16 1973a  
Permafrost origin, Permafrost structure, Ground ice, Tectonics, Permafrost thickness, Topographic factors.
- 33-127  
Frost-induced deformations of anthropogenic deposits in the Ukraine.  
Veklich, M.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.189-192, For Russian original see 28-1066. 9 refs.  
Sirenko, N.A., Dubniak, V.A.  
DLC GB641.16 1973a  
Frozen fines, Loess, Ice veins, Ice melting, Polygons.
- 33-128  
Cryogenic texture of soils in the layer of seasonal thawing.  
Vtiurina, E.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.192-195, For Russian original see 28-1067. 3 refs.  
DLC GB641.16 1973a  
Active layer, Frozen rocks, Cryogenic structures, Cryogenic textures.

- 33-129**  
Self-regulating mechanism of size-limited ice wedges. Gasanov, Sh.Sh., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.195-197, For Russian original see 28-1068. 6 refs.  
DLC GB641.16 1973a  
Ground ice, Ice wedges, Ice growth, Heat transfer, Soil moisture migration.
- 33-130**  
Ice formation during the development of epigenetic permafrost. Zhestkova, T.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.197-199, For Russian original see 28-1069.  
DLC GB641.16 1973a  
Permafrost origin, Ground ice, Ice growth, Soil moisture migration.
- 33-131**  
Cryogenic structure of Quaternary deposits on the Yamal Peninsula. Koreisha, M.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.199-201, For Russian original see 28-1070. 3 refs.  
DLC GB641.16 1973a  
Permafrost distribution, Permafrost structure, Ground ice, Ice growth, Topographic factors, Permafrost origin, USSR—Yamal Peninsula.
- 33-132**  
Changes in the composition and properties of clay soils during freezing. Leshchikov, F.N., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.201-203, For Russian original see 28-1071. 3 refs.  
Riashchenko, T.G.  
DLC GB641.16 1973a  
Clay soils, Frost penetration, Seasonal freeze thaw, Clay minerals, Frozen fines.
- 33-133**  
Effect of cryogenesis on the soil cover and soil profile. Naumov, E.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.204-205, For Russian original see 28-1072. 9 refs.  
DLC GB641.16 1973a  
Patterned ground, Polygons, Ice veins, Landscape development, Plant ecology, Subarctic soils, Soil profiles, Subarctic vegetation.
- 33-134**  
Formation of diamond placers under conditions of Arctic climate and permafrost. Prokopchuk, B.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.206-207, For Russian original see 28-1073. 3 refs.  
DLC GB641.16 1973a  
Arctic climate, Frost shattering, Permafrost structure, Placer mining, Active layer thickness.
- 33-135**  
Some patterns of formation of the horizon of discontinuous frost weathering. Tumel', N.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.207-209, For Russian original see 28-1074. 4 refs.  
Mudrov, I.U.V.  
DLC GB641.16 1973a  
Active layer, Freeze thaw cycles, Ground ice, Ice growth, Frost shattering, Fines, Thixotropy, Patterned ground, Microrelief, Loess, Cryogenic soils.
- 33-136**  
Clay minerals in Pleistocene permafrost and contemporaneous bottom deposits of Central Yakutia (an X-ray study). Uskov, M.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.210-212, For Russian original see 28-1075. 7 refs.  
DLC GB641.16 1973a  
Quaternary deposits, Bottom sediment, Clay minerals, Permafrost.
- 33-137**  
Mechanism of formation of lenslike ice in streams and soils. Utkin, B.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.212-213, For Russian original see 28-1076.  
DLC GB641.16 1973a  
Ice lenses, Pingos, Ice growth, Alimentation, Frozen fines, Frost heave, Thixotropy.
- 33-138**  
Mechanical properties of ice as a function of the conditions of its formation. Volkovskii, K.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.217-222, For Russian original see 28-1077. 5 refs.  
Golubev, V.N.  
DLC GB641.16 1973a  
Ice formation, Ice structure, Fracture zones, Mechanical properties, Analysis (mathematics).
- 33-139**  
Long term rupture of frozen soil as a thermally activated process. Vialov, S.S., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.222-228, For Russian original see 28-1078. 13 refs.  
DLC GB641.16 1973a  
Frozen ground mechanics, Loads (forces), Frozen ground strength, Creep rate, Thermal effects, Ground ice, Ice deterioration, Analysis (mathematics).
- 33-140**  
Basic laws of thermorheology and temperature cracking of frozen ground. Grechishchev, S.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.228-234, For Russian original see 28-1079. 22 refs.  
DLC GB641.16 1973a  
Frost shattering, Frozen ground strength, Rheology, Frozen ground extension, Thermal factors, Fracturing.
- 33-141**  
Basic laws of the formation of the composition and engineering-geologic properties of frozen soils during freezing and thawing. Kudriavtsev, V.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.234-238, For Russian original see 28-1080. 21 refs.  
Poltev, N.F., Trush, N.I., Shusherina, E.P.  
DLC GB641.16 1973a  
Frozen fines, Soil moisture migration, Phase transformations, Soil colloids, Ground ice, Frozen ground strength, Creep properties.
- 33-142**  
Physical and mechanical properties of saline soils. Tsytoich, N.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.238-247, For Russian original see 28-1081. 15 refs.  
Kronik, I.A.A., Markin, K.F., Aksenov, V.I., Samuelson, M.V.  
DLC GB641.16 1973a  
Saline soils, Classifications, Bearing strength, Frozen ground, Unfrozen water content.
- 33-143**  
Physical and mechanical properties of frozen and thawing coarse clastic soils. Tsytoich, N.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.247-254, For Russian original see 28-1082. 20 refs.  
Kronik, I.A.A.  
DLC GB641.16 1973a  
Frozen gravel, Frozen sand, Cements, Clay minerals, Creep properties, Bearing strength.
- 33-144**  
Basic laws of cryogenic processes in silt-clay and sandy formations. Shvetsov, P.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.254-261, For Russian original see 28-1083. 22 refs.  
Grechishchev, S.E., Chistotinov, L.V.  
DLC GB641.16 1973a  
Frozen fines, Frost penetration, Ground thawing, Cryogenic processes, Ground ice, Ice growth, Soil moisture migration, Phase transformations, Analysis (mathematics).
- 33-145**  
Effect of congelators on the magnitude of frost heave of Far Eastern supposes and suglinoaks. Voroshilov, G.D., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.261-264, For Russian original see 28-1084.  
DLC GB641.16 1973a  
Clay soils, Loams, Frost penetration, Frost heave, Soil moisture migration, Flow control, Congelation.
- 33-146**  
Structural transformations in frozen soils on variation of the ground temperature. Votikov, I.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.264-267, For Russian original see 28-1085.  
DLC GB641.16 1973a  
Frozen fines, Cryogenic textures, Soil moisture migration, Phase transformations, Frozen ground mechanics, Bearing strength, Ground ice, Ice growth, Permafrost physics.
- 33-147**  
Stability of earth structures and embankments. Dement'ev, A.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.267-268, For Russian original see 28-1086.  
DLC GB641.16 1973a  
Earth dams, Roadbeds, Embankments, Slope stability, Settlement (structural), Ground thawing, Permafrost.
- 33-148**  
Some heave laws of freezing soils. Orlov, V.O., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.269-271, For Russian original see 28-1087. 2 refs.  
DLC GB641.16 1973a  
Cryogenic processes, Frost heave, Frozen fines, Soil moisture migration, Phase transformations, Ground ice, Ice growth.
- 33-149**  
Role of periglacial climate in deep disturbances of the Tertiary deposits of the Bohemian massif. Rybář, J., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.271-273, For Russian original see 28-1088. 5 refs.  
DLC GB641.16 1973a  
Periglacial processes, Frost shattering, Freeze thaw cycles, Frozen fines, Alluvium, Frozen gravel, Creep properties, Plastic deformation, Czechoslovakia—Bohemian Forest.
- 33-150**  
Nature of deformation and variation in strength of frozen coarse clastics as a function of their composition and structure. Talbashev, V.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.274-276, For Russian original see 28-1089. 2 refs.  
DLC GB641.16 1973a  
Frozen gravel, Compressive strength, Rheology, Tests.

- 33-151**  
Effect of freezing and thawing on the structure, composition and properties of cohesive soils.  
Tiutiunov, I.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.277-280, For Russian original see 28-1090. 6 refs.  
Averochkina, M.V., Titov, V.P.  
DLC GB641.16 1973a  
Frozen fines, Ground thawing, Loess, Bearing strength, Cryogenic processes, Soil formation, Clay minerals, Frost heave, Soil moisture migration, Ground ice, Ice growth.
- 33-152**  
Compressometric studies of the strength and deformation of frozen soils during thawing.  
Shvets, V.B., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.281-283, For Russian original see 28-1091. 3 refs.  
Lushnikov, V.V., Mareninov, I.A., Sukhanov, B.I.  
DLC GB641.16 1973a  
Frozen fines, Ground thawing, Compressive strength, Plastic deformation, Borehole instruments, Test equipment.
- 33-153**  
Nature of water in very fine-grained deposits and its crystallization characteristics.  
Ananian, A.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.283-286, For Russian original see 28-1092. 17 refs.  
DLC GB641.16 1973a  
Frozen fines, Soil moisture migration, Phase transformations, Water structure, Molecular structure, Unfrozen water content, Ice crystal formation.
- 33-154**  
Structures, phase transitions, and properties of free and bound water.  
Dostovalov, B.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.287-292, For Russian original see 28-1093. 1 ref.  
DLC GB641.16 1973a  
Clay soils, Soil moisture, Hygroscopic water, Phase transformations, Ice crystal growth, Unfrozen water content, Water structure, Ice melting, Models, Permafrost.
- 33-155**  
Migration of moisture in fine grained soils of different composition, structure and properties.  
Kudriavtsev, V.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.292-298, For Russian original see 28-1094. 15 refs.  
Ershov, E.D., Cheverev, V.G.  
DLC GB641.16 1973a  
Frozen fines, Soil moisture, Moisture transfer, Ground thawing, Soil freezing, Frost penetration, Cryogenic textures, Cryogenic structures, Frozen ground thermodynamics, Measuring instruments, Test equipment.
- 33-156**  
Problems in the thermodynamics of frozen deposits.  
Savel'ev, B.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.298-302, For Russian original see 28-1095. 5 refs.  
DLC GB641.16 1973a  
Frozen fines, Frost penetration, Ground ice, Ice formation, Unfrozen water content, Frozen ground thermodynamics, Mass transfer, Heat transfer, Analysis (mathematics).
- 33-157**  
New concepts of the nature of frozen soils.  
Tiutiunov, I.S., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.303-307, For Russian original see 28-1096. 8 refs.  
DLC GB641.16 1973a  
Soil moisture migration, Hygroscopic water, Phase transformations, Water films, Molecular structure, Ice formation, Frozen ground strength, Bearing capacity.
- 33-158**  
Elastic and electrical properties of frozen ground.  
Frolov, A.D., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.307-312, For Russian original see 28-1097. 13 refs.  
DLC GB641.16 1973a  
Frozen sand, Ground ice, Ice formation, Unfrozen water content, Electrical properties, Elastic properties.
- 33-159**  
Electrical conductivity of frozen rocks.  
IAkupov, V.S., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.312-314, For Russian original see 28-1098. 1 ref.  
DLC GB641.16 1973a  
Frost penetration, Moisture transfer, Phase transformations, Frozen rocks, Electrical resistivity.
- 33-160**  
Study of the structural changes in soils during freezing.  
Aguirre-Puente, J., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.315-323, For Russian original see 28-1099. 17 refs.  
Vignes, M., Viaud, P.  
DLC GB641.16 1973a  
Cryogenic processes, Stefan problem, Soil freezing, Soil moisture migration, Phase transformations, Heat transfer, Frost penetration, Ice water interface, Water films, Molecular structure, Ice structure, Mathematical models.
- 33-161**  
Some characteristic features of water migration during freezing of fine soils.  
Volkova, E.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.324-327, For Russian original see 28-1100. 3 refs.  
DLC GB641.16 1973a  
Frozen fines, Clay minerals, Moisture transfer, Frost penetration, Ice crystal growth, Water films, Molecular structure, Physical properties.
- 33-162**  
Ice structure as a function of salinity of the freezing water.  
Golubev, V.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.327-330, For Russian original see 28-1101. 3 refs.  
DLC GB641.16 1973a  
Ice crystal optics, Ice structure, Ice crystal growth, Brines, Lake ice, Sea ice, Thermal factors.
- 33-163**  
Ice sublimation in fine-grained soils of various cryogenic structures during their interaction with an air current.  
Ershov, E.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.330-332, For Russian original see 28-1102. 6 refs.  
Gurov, V.V., Dostovalov, B.N.  
DLC GB641.16 1973a  
Ice sublimation, Ground ice, Soil moisture migration, Frost penetration, Water films, Clayey soils, Water structure, Molecular structure.
- 33-164**  
Application of optical methods in studying the structure of frozen soils.  
Zigert, Kh., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.332-335, For Russian original see 28-1103. 12 refs.  
DLC GB641.16 1973a  
Frozen fines, Cryogenic textures, Ice structure, Microscope slides, Laboratory techniques, Ice cement.
- 33-165**  
Application of ultrasonics for evaluating the phase composition of water and strength characteristics of frozen soils.  
Zykov, I.U.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.335-337, For Russian original see 28-1104. 4 refs.  
Frolov, A.D., Shusherina, E.P.  
DLC GB641.16 1973a  
Frozen ground physics, Ultrasonic tests, Frozen ground strength, Shear strength, Compressive strength.
- 33-166**  
Theory of two-phase porous media.  
Karakin, A.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.337-339, For Russian original see 28-1105. 6 refs.  
DLC GB641.16 1973a  
Soil moisture migration, Phase transformations, Ground ice, Crystal lattices, Deformation, Viscous flow, Analysis (mathematics).
- 33-157**  
Surface phenomena at the ice-gas and ice-solid interfaces.  
Kiselev, V.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.339-341, For Russian original see 28-1106. 17 refs.  
Kvividze, V.I., Kurzaev, A.B.  
DLC GB641.16 1973a  
Ground ice, Water films, Ice structure, Ice vapor interface, Ice solid interface, Ice models.
- 33-168**  
Characteristic features of ice formation in contact with frozen soils.  
Savel'ev, I.B., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.341-344, For Russian original see 28-1107. 6 refs.  
DLC GB641.16 1973a  
Frozen fines, Clays, Ice accretion, Unfrozen water content, Ice structure, Microelement content.
- 33-169**  
Evaluation of some physical properties of frozen soils as a function of the unfrozen water in them.  
Sarkisian, R.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.344-347, For Russian original see 28-1108. 3 refs.  
DLC GB641.16 1973a  
Frozen ground hydrology, Unfrozen water content, Analysis (mathematics), Thermal factors.
- 33-170**  
Study of the induced polarization of systems simulating soils during freezing.  
Sidorova, M.P., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.347-349, For Russian original see 28-1109. 11 refs.  
Fridrikhsberg, D.A.  
DLC GB641.16 1973a  
Frozen sand, Frozen fines, Clays, Models, Water films, Phase transformations, Frost penetration, Electrical properties.
- 33-171**  
Ultrasonic method of determining the phase composition of ice formation from seawater and solutions.  
Slesarenko, I.U.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.350-351, For Russian original see 28-1110. 8 refs.  
DLC GB641.16 1973a  
Sea ice, Ice salinity, Unfrozen water content, Ice strength, Ultrasonic tests.

- 33-172**  
Application of the method of induced polarization for studying fine-grained frozen soils.  
Snegirev, A.M., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.352-354, For Russian original see 28-1111. 6 refs.  
Liakhov, L.L., Mel'nikov, V.P.  
DLC GB641.16 1973a  
Frozen fines, Ground ice, Electrical properties, Unfrozen water content.
- 33-173**  
Characteristic features of the theoretical simulation of electrochemical processes in ion-conducting frozen deposits.  
Snegirev, A.M., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.353-356, For Russian original see 28-1112. 8 refs.  
Mel'nikov, V.P., Gennadink, B.I.  
DLC GB641.16 1973a  
Models, Frozen rocks, Electrical properties.
- 33-174**  
Dielectric method of determining the unfrozen water content in frozen sandy-clay soils.  
Frolov, A.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.356-358, For Russian original see 28-1113. 6 refs.  
Gusev, B.V.  
DLC GB641.16 1973a  
Frozen sand, Frozen fines, Clay minerals, Unfrozen water content, Dielectric properties.
- 33-175**  
Effect of natural electric potentials on water migration in freezing soils.  
Iarkin, I.G., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.359-361, For Russian original see 28-1114. 8 refs.  
DLC GB641.16 1973a  
Soil freezing, Soil moisture migration, Frost penetration, Electrical properties, Measuring instruments.
- 33-176**  
Cryogenic metamorphism of chemical composition of subsurface water (exemplified in central Yakutia).  
Anisimova, N.P., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.365-370, For Russian original see 28-1115. 16 refs.  
DLC GB641.16 1973a  
Permafrost hydrology, Ground water, Chemical composition, Taliks, Naleds.
- 33-177**  
Role of valley taliks in formation of underground drainage in northeastern Yakutia.  
Afanasenkov, V.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.370-374, For Russian original see 28-1116. 6 refs.  
DLC GB641.16 1973a  
Permafrost hydrology, Ground water, Runoff, Taliks, Naleds.
- 33-178**  
Basic features in hydrogeologic structures of the permafrost area in the USSR.  
Baskov, E.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.374-377, For Russian original see 28-1117. 11 refs.  
Zaitsev, I.K.  
DLC GB641.16 1973a  
Permafrost hydrology, Mapping, Cryogenic processes, Artesian water, Hydrothermal processes, Water chemistry.
- 33-179**  
Hydrodynamic and hydrochemical processes in the area of the cooling of earth's crust.  
Ginsburg, G.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.377-381, For Russian original see 28-1118. 12 refs.  
Neizvestnov, I.A.V.  
DLC GB641.16 1973a  
Permafrost origin, Frost penetration, Cooling rate, Permafrost hydrology, Freeze thaw cycles, Water chemistry.
- 33-180**  
Effect of mantle glaciations on permafrost-hydrogeologic conditions in periglacial zone of Europe.  
Klatkova, G., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.381-385, For Russian original see 28-1119. 14 refs.  
Romanovskii, N.N.  
DLC GB641.16 1973a  
Periglacial processes, Permafrost hydrology, Naleds, Permafrost distribution.
- 33-181**  
Principles of hydrodynamic calculations of systems for extracting deep-seated heat from the earth in permafrost regions.  
Maksimov, V.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.386-391, For Russian original see 28-1120. 5 refs.  
DLC GB641.16 1973a  
Permafrost hydrology, Hot springs, Heat recovery, Heating, Buildings, Mining.
- 33-182**  
Zonation and regime of naleds in Trans-Baikai region.  
Osokin, I.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.391-396, For Russian original see 28-1121. 30 refs.  
DLC GB641.16 1973a  
Mapping, Naleds, Classifications, Distribution, USSR—Transbaikai.
- 33-183**  
Formation of naleds in basin of Khubsugul Lake (Mongolian People's Republic).  
Pisarskii, B.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.396-400, For Russian original see 28-1122. 6 refs.  
Shpeizer, G.M., Badrakh, D., Mineeva, L.A., Enebish, E.E.  
DLC GB641.16 1973a  
Permafrost hydrology, Naleds, Origin, Distribution.
- 33-184**  
Technique and results of exploring for fresh subsurface water in the Noril'sk mining-industrial regions under conditions of the Far North.  
Roginets, I.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.400-403, For Russian original see 28-1123. 2 refs.

Underground cryology on Soviet Arctic shelf and islands.  
Neizvestnov, I.A.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.431-433, For Russian original see 28-1131. 5 refs.  
Semenov, I.U.P.  
DLC GB641.16 1973a  
Submarine permafrost, Ground ice, Permafrost hydrology, Brines, Unfrozen water content, Permafrost structure, Permafrost distribution.

33-193

Interaction of cryolithosphere and subsurface water in deep horizons of artesian basins. Pinneker, E.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.433-435, For Russian original see 28-1132. DLC GB641.16 1973a  
Permafrost hydrology, Cryogenic processes, Artesian water, Taliks, Water chemistry, Subpermafrost ground water.

33-194

Demarcation of cryolithic zone based on paragenetic relations between subsurface water and layers of frozen rock. Sukhodol'skii, S.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.436-437, For Russian original see 28-1133. 4 refs. DLC GB641.16 1973a  
Permafrost distribution, Permafrost hydrology, Mapping.

33-195

Investigation of river naleds and increase in effectiveness of anti-naled work. Tsvid, A.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.437-438, For Russian original see 28-1134. Khomichuk, A.N. DLC GB641.16 1973a  
Permafrost hydrology, Naleds, Ice cover thickness, Countermeasures.

33-196

Subsurface water regime in areas of occurrence of cryogenic processes and hydrochemical zoning of fossil ice. IAs'ko, V.G., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.438-441, For Russian original see 28-1135. 7 refs. DLC GB641.16 1973a  
Permafrost hydrology, Ground ice, Ice composition, Water chemistry, Ground water, Cryogenic processes.

33-197

Lake coverage in USSR cryolithic zone. Mostakhov, S.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.441-442, For Russian original see 28-1136. 3 refs. DLC GB641.16 1973a  
Permafrost hydrology, Lakes, Thermokarst, Taliks.

33-198

Features involved in permafrost engineering—geologic investigations during exploration for mineral deposits. Golodkovskaia, G.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.445-447, For Russian original see 28-1137. Demidiuk, L.M., Shaumian, L.V. DLC GB641.16 1973a  
Permafrost distribution, Mining, Shaft sinking, Geophysical surveys, Engineering geology.

33-199

New electrometric technique for studying the structure of permafrost. Avetikian, I.U.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.448-452, For Russian original see 28-1138. 5 refs. DLC GB641.16 1973a  
Permafrost structure, Permafrost distribution, Geophysical surveys, Electrical prospecting.

33-200

Logging in shallow dry boreholes for studying geotechnical and geodynamic characteristics of frozen soils. Akimov, A.T., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.452-456, For Russian original see 28-1139. 6 refs. DLC GB641.16 1973a  
Permafrost physics, Frozen ground mechanics, Geophysical surveys, Well logging, Acoustic measurement, Electrical prospecting, Tundra terrain, Elastic waves, Wave propagation, Seismic prospecting.

33-201

Seismicity of the cryolithic zone and problems of engineering seismic geocryology. Solonenko, V.P., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.457-462, For Russian original see 28-1140. 20 refs. DLC GB641.16 1973a  
Permafrost structure, Ground ice, Seismology, Naleds, Solifluction, Landslides, Earthquakes.

33-202

Principles of compiling small-scale geocryologic maps. Gavrilov, A.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.462-466, For Russian original see 28-1141. 6 refs. Kondrat'eva, K.A. DLC GB641.16 1973a  
Permafrost distribution, Maps, Permafrost structure, Permafrost depth, Active layer thickness, Surface temperature, Ground ice, Cryogenic textures, Permafrost hydrology.

33-203

Permafrost prediction and methods of its formulation. Kudriavtsev, V.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.466-469, For Russian original see 28-1142. DLC GB641.16 1973a  
Soil surveys, Active layer thickness, Permafrost transformation, Forecasting, Ground ice, Permafrost structure, Heat balance, Radiation balance, Human factors, Vegetation factors, Topographic factors.

33-204

Scientific-procedural bases for predicting the engineering-geocryological occurrences in sectors under development. Shvetsov, P.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.470-475, For Russian original see 28-1143. 12 refs. Bobov, N.G. DLC GB641.16 1973a  
Subarctic terrain, Human factors engineering, Subarctic topography, Vegetation factors, Permafrost beneath structures, Foundations.

33-205

Predicting the variation in seismic properties of permafrost. Zarubin, N.E., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.475-479, For Russian original see 28-1144. 9 refs. Pavlov, G.V. DLC GB641.16 1973a  
Permafrost distribution, Maps, Permafrost physics, Cryogenic processes, Ground ice, Seismology, Earthquakes, Permafrost hydrology, Taliks, Seismic velocity.

33-206

Problems in investigation of frozen ground and subsurface water as a self-regulating system. Chizhov, A.B., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.480-482, For Russian original see 28-1145. 10 refs. DLC GB641.16 1973a  
Permafrost hydrology, Mathematical models.

33-207

Investigation of dependence of specific resistance of unconsolidated frozen deposits in original bedding on cryogenic textures and temperatures. Bogoliubov, A.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.482-485, For Russian original see 28-1146. 10 refs. DLC GB641.16 1973a  
Electrical prospecting, Permafrost structure, Ground ice, Electrical resistivity, Unfrozen water content, Frozen ground temperature.

33-208

Experimental investigations of seismic properties of frozen soils. Dzhurik, V.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.485-488, For Russian original see 28-1147. 4 refs. Leshchikov, F.N. DLC GB641.16 1973a  
Frozen ground physics, Elastic waves, Frozen fines, Wave propagation, Permafrost structure, Acoustic properties, Tests, Laboratory techniques.

33-209

Radar probing of ice and possibility of the sounding of permafrost. Bogorodskii, V.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.488-491, For Russian original see 28-1148. 7 refs. Trepov, G.V., Fedorov, B.A., Khokhlov, G.P. DLC GB641.16 1973a  
Glacier thickness, Radar echoes, Permafrost structure, Permafrost thickness, Permafrost distribution, Dielectric properties, Airborne radar.

33-210

Study of underground ice by the method of seismic exploration. Voronkov, O.K., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.491-494, For Russian original see 28-1149. 4 refs. Mikhailovskii, G.V. DLC GB641.16 1973a  
Permafrost structure, Seismic prospecting, Ground ice, Seismic velocity, Ice volume, Permafrost beneath buildings, Ice veins.

33-211

Potentialities of seismic-acoustic techniques in engineering-geologic investigations for construction on permafrost. Zikov, I.U.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.495-497, For Russian original see 28-1150. 7 refs. Baulin, I.U.I. DLC GB641.16 1973a  
Permafrost distribution, Seismic surveys, Permafrost thickness, Ground ice, Active layer thickness, Seismic velocity, Mapping, Frozen ground temperature, USSR—Ural Mountains.

33-212

Concerning the nature of an induced polarized field in connection with the surface polarization at the boundary between thawed and frozen soils. Mel'nikov, V.P., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.497-500, For Russian original see 28-1151. 7 refs. DLC GB641.16 1973a  
Electrical prospecting, Active layer, Permafrost, Interfaces, Electrical properties, Models.

33-213

Principles involved in the mapping of permafrost according to its cryogenic structure. Vtiurin, B.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-28, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.501-503, For Russian original see 28-1152. DLC GB641.16 1973a  
Maps, Permafrost structure, Ground ice, Ice veins, Permafrost distribution.

- 33-214  
Possibilities of seismic exploration by reflected waves for mapping and zoning of frozen soils.  
Agafonov, I.U.K., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.503-507, For Russian original see 28-1153. 2 refs.  
DLC GB641.16 1973a  
Seismic prospecting, Permafrost distribution, Seismic reflection, Active layer thickness, Permafrost thickness, Mapping.
- 33-215  
Mapping of permafrost with the aid of a dipole electromagnetic profiling technique.  
Krasovskii, A.G., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.507-509, For Russian original see 28-1154. 4 refs.  
DLC GB641.16 1973a  
Electromagnetic prospecting, Mapping, Permafrost.
- 33-216  
Differentiation of frozen soils and fluids occurring with them in the West Siberian lowland by the techniques of industrial geophysics.  
Irbe, N.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.509-512, For Russian original see 28-1155. 8 refs.  
DLC GB641.16 1973a  
Geophysical surveys, Wells, Permafrost structure, Ground ice, Taliks.
- 33-217  
Engineering-geocryological conditions and principles of construction in Magadan oblast.  
Gol'dtman, V.G., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.515-518, For Russian original see 28-1156. 7 refs.  
DLC GB641.16 1973a  
Permafrost distribution, Lithology, Alluvium, Frost heave, Ground thawing, Settlement (structural).
- 33-218  
Experience in construction on permafrost in the vicinity of Noril'sk.  
Koliada, V.N., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.518-526, For Russian original see 28-1157. 7 refs.  
DLC GB641.16 1973a  
Residential buildings, Industrial buildings, Foundations, Permafrost beneath buildings, Ducts, Pile foundations.
- 33-219  
Permafrost conditions and experience in constructing foundations in Vorkuta.  
Eroshenko, V.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.526-528, For Russian original see 28-1158. 4 refs.  
DLC GB641.16 1973a  
Pile foundations, Permafrost beneath structures, Frozen ground strength.
- 33-220  
Permafrost conditions and the construction of foundations in the vicinity of Mirnyy.  
Gur'ianov, I.E., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.528-532, For Russian original see 28-1159. 6 refs.  
DLC GB641.16 1973a  
Foundations, Piles, Permafrost.
- 33-221  
Evaluation of the variations of the temperature regime of permafrost in a built-up area.  
Porkhaev, G.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.532-537, For Russian original see 28-1160. 7 refs.  
Shchelokov, V.K.  
DLC GB641.16 1973a  
Permafrost thermal properties, Tundra soils, Permafrost control, Snow cover effect, Human factors, Construction.
- 33-222  
Ground ice as the bearing stratum for construction.  
Vialov, S.S., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.537-545, For Russian original see 28-1161. 11 refs.  
DLC GB641.16 1973a  
Ground ice, Ice bearing capacity, Loads (forces), Ice deformation, Pile foundations.
- 33-223  
Saline permafrost as bearing ground for construction.  
Velli, I.U.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.545-550, For Russian original see 28-1162. 5 refs.  
Karpunina, A.A.  
DLC GB641.16 1973a  
Saline soils, Permafrost beneath structures, Bearing capacity, Frozen ground strength, Shear strength, Foundations.
- 33-224  
Artificial thawing of permafrost before construction.  
Zhukov, V.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.550-553, For Russian original see 28-1163. 11 refs.  
Ponomarev, V.D.  
DLC GB641.16 1973a  
Permafrost beneath structures, Active layer, Artificial thawing, Foundations, Buildings.
- 33-225  
Methods of cooling plastically frozen ground.  
Maksimov, G.N., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.553-560, For Russian original see 28-1164. 12 refs.  
Zaniatin, S.I., Kononov, A.A.  
DLC GB641.16 1973a  
Permafrost beneath structures, Bearing strength, Foundations, Permafrost control.
- 33-226  
Bearing capacity of piles in permafrost.  
Markin, K.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.560-565, For Russian original see 28-1165. 9 refs.  
Targulian, I.U.O.  
DLC GB641.16 1973a  
Pile foundations, Bearing capacity, Permafrost.
- 33-227  
Grouted (prepacked) pile foundations on permafrost.  
Epshtein, I.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.565-572, For Russian original see 28-1166. 7 refs.  
DLC GB641.16 1973a  
Pile foundations, Concrete piles, Bearing capacity, Permafrost.
- 33-228  
Interaction of freezing heaving ground with foundations.  
Dalmatov, B.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.572-576, For Russian original see 28-1167. 9 refs.  
DLC GB641.16 1973a  
Frozen fines, Clays, Frost heave, Permafrost beneath structures, Foundations.
- 33-229  
Study of the interaction of heaving ground with individual foundations.  
Peretrukhin, N.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.577-580, For Russian original see 28-1168. 7 refs.  
Dubnov, I.U.D., Merenkov, N.D.  
DLC GB641.16 1973a  
Foundations, Permafrost beneath structures, Frost heave, Soil moisture migration, Models, Laboratory techniques.
- 33-230  
Physicochemical methods of varying the forces with which earth freezes to foundations.  
Pchelintsev, A.M., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.580-584, For Russian original see 28-1169. 5 refs.  
DLC GB641.16 1973a  
Foundations, Soil freezing, Adhesive strength, Protective coatings, Concrete structures, Surface roughness, Ice adhesion.
- 33-231  
Basic areas of geocryological research in mining.  
Bakakin, V.P., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.585-586, For Russian original see 28-1170. 4 refs.  
DLC GB641.16 1973a  
Mine shafts, Ventilation, Shaft sinking, Excavating equipment, Transportation, Permafrost, Mining.
- 33-232  
Effect of geocryological conditions on the productivity of mining operations in the northeastern USSR.  
Chaban, P.D., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.587-590, For Russian original see 28-1171. 6 refs.  
Gol'dtman, V.G.  
DLC GB641.16 1973a  
Placer mining, Artificial thawing, Mine shafts, Air temperature, Permafrost thermal properties, Temperature control, Ventilation.
- 33-233  
Construction of dams from local materials in the Soviet North.  
Gluskin, I.A.E., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.591-594, For Russian original see 28-1172. 4 refs.  
Ziskovich, V.E.  
DLC GB641.16 1973a  
Hydroelectric power generation, Hydraulic structures, Dams, Earth fills, Construction materials, Frozen gravel, Permafrost beneath structures, Permafrost control.
- 33-234  
Experience in constructing dams on permafrost in Yakutia.  
Bilanov, G.F., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.594-598, For Russian original see 28-1173. 4 refs.  
DLC GB641.16 1973a  
Hydroelectric power generation, Hydraulic structures, Dams, Earth fills, Permafrost beneath structures, Permafrost control.
- 33-235  
Geocryological conditions and procedures for laying the Noril'sk-Messoyakha pipeline.  
Mel'nikov, P.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.599-604, For Russian original see 28-1174. 4 refs.  
Bakulin, F.G., Karpov, E.G., Kolesov, A.A.  
DLC GB641.16 1973a  
Pipe laying, Tundra terrain, Tundra soils, Swamps, Pipeline supports, Piles.

33-236

Pipeline construction in permafrost regions. Spiridonov, V.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.604-609, For Russian original see 28-1175. Semenov, L.P., Krivoshein, B.L.  
DLC GB641.16 1973a

Tundra terrain, Swamps, Pipe laying, Pipeline supports, Surveying, Design.

33-237

Selection of the optimal alternative route of a major gas pipeline on permafrost.

Dertsakian, A.K., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.609-612, For Russian original see 28-1176. 2 refs.

DLC GB641.16 1973a

Gas pipelines, Route surveys, Design, Permafrost.

33-238

Engineering-geocryological survey of major pipeline routes.

Minkin, M.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.612-619, For Russian original see 28-1177. 7 refs.

DLC GB641.16 1973a

Gas pipelines, Route surveys, Permafrost.

33-239

Thawing and the differential settlement of the ground around oil wells in permafrost.

Palmer, A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.619-624, For Russian version see 28-1178. 10 refs.

DLC GB641.16 1973a

Oil wells, Ground thawing, Settlement (structural), Linings, Stresses, Mathematical models.

33-240

Principles of planning, design, and construction of highways on permafrost.

Malyshev, A.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.625-629, For Russian original see 28-1179. 4 refs.

Popov, B.I.

DLC GB641.16 1973a

Roads, Embankments, Design, Permafrost.

33-241

Scientific-procedural principles of investigation and the main features of hydrogeology of northern countries (exemplified by Northeastern USSR).

Kalabin, A.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.629-636, For Russian original see 28-1180. 10 refs.

DLC GB641.16 1973a

Permafrost hydrology, Cryogenic processes, Naleds, Taliks, Subpermafrost ground water, Water supply, Ground water, Water chemistry, USSR—Verkhoyansk.

33-242

Regulation of the heat exchange of buildings and structures with ventilated pads on frozen ground.

Snezhko, O.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.637-638, For Russian original see 28-1181. 6 refs.

Kabanov, E.P.

DLC GB641.16 1973a

Permafrost beneath structures, Foundations, Heat transfer, Permafrost control.

33-243

Efficient cooling of the permafrost foundation of a multispan industrial building.

Shishkanov, G.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.639-641, For Russian original see 28-1182. Kuznetsov, G.I., Kutvitskaia, N.B.

DLC GB641.16 1973a

Permafrost beneath structures, Permafrost preservation, Industrial buildings, Foundations.

33-244

Liquid cooling units for freezing thawed ground and cooling plastically frozen ground for construction in areas with harsh climates.

Biianov, G.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.641-643, For Russian original see 28-1183. 5 refs.

Makarov, V.I., Molochnikov, A.D.

DLC GB641.16 1973a

Cold weather construction, Artificial freezing, Permafrost preservation.

33-245

Performance of flexible footings on thawing permafrost.

Kolesov, A.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.644-647, For Russian original see 28-1184.

DLC GB641.16 1973a

Foundations, Permafrost beneath structures, Frozen ground strength, Frozen ground compression, Ground thawing, Loads (forces), Stresses.

33-246

Calculating the settlement of foundations on plastically frozen ground.

Zatsarnaia, A.G., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.647-650, For Russian original see 28-1185. 3 refs.

DLC GB641.16 1973a

Foundations, Frozen ground strength, Settlement (structural), Frozen ground compression.

33-247

Addfreeze between ground and foundation materials.

Sadovskii, A.V., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.650-653, For Russian original see 28-1186. 6 refs.

DLC GB641.16 1973a

Foundations, Construction materials, Ground ice, Adhesive strength.

33-248

Values of the tangential stresses of ground heave.

Kiselev, M.F., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.653-655, For Russian original see 28-1187.

DLC GB641.16 1973a

Cryogenic processes, Frost heave, Foundations, Design, Stresses.

33-249

Thermal interaction of permafrost and underground structures.

Zil'berbord, A.F., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.655-657, For Russian original see 28-1188. 1 ref.

Shur, I.U.L.

DLC GB641.16 1973a

Underground storage, Storage tanks, Heat transfer, Loads (forces), Permafrost.

33-250

Stability of the sides of open pits in permafrost.

Glozman, G.R., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.657-659, For Russian original see 28-1189. 4 refs.

Ermakov, I.I., Bobov, N.G.

DLC GB641.16 1973a

Mining, Slope processes, Slope stability, Permafrost weathering.

33-251

Effect of cryogenic processes on the stability of high tailings banks in polar open-pit mines.

Kalabin, G.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.659-661, For Russian original see 28-1190. Krasnosel'skii, E.B., Ovodenko, B.K., Ulyanin, V.I.

DLC GB641.16 1973a

Slope stability, Cryogenic processes, Permafrost weathering, Mining.

33-252

Thermal regime of the base and core of the dam at the Vilyuy hydroelectric power plant.

Kamenskii, R.M., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.661-665, For Russian original see 28-1191. 3 refs.

DLC GB641.16 1973a

Hydroelectric power generation, Hydraulic structures, Permafrost beneath structures, Dams, Thermal regimes.

33-253

Properties of the formation and quantitative estimate of the ice content of granite permafrost at the construction site of the Kolyma hydroelectric power plant.

Zhukovskii, S.I.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.665-668, For Russian original see 28-1192. 7 refs.

Mazurov, O.S., Pirogov, I.A.

DLC GB641.16 1973a

Ground ice, Permafrost structure, Dams, Frost shattering, Hydroelectric power generation.

33-254

Cryogenic phenomena in earthen hydroengineering structures.

Kronik, I.A.A., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.668-670, For Russian original see 28-1193. 3 refs.

DLC GB641.16 1973a

Earth dams, Cryogenic processes, Frost heave, Ice melting, Frost shattering, Solifluction, Naleds.

33-255

Deformation of underground wave guides during seasonal freezing of the ground.

Sadovskii, A.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.671-672, For Russian original see 28-1194. Semenov, L.P., Dmitrichenko, V.M.

DLC GB641.16 1973a

Underground cables, Pipelines, Seasonal freeze thaw, Loads (forces), Deformation.

33-256

Temperature regime of the frozen soils at the sites of some transport structures.

Pal'kin, I.U.S., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.672-674, For Russian original see 28-1195.

Tsernant, A.A., Stepanov, V.A., Pal'kina, Z.M.

DLC GB641.16 1973a

Embankments, Dams, Buildings, Construction, Culverts, Thermal regime, Railroads, Roads.

33-257

Calculating the surface temperature of pavements, roads and runways on permafrost.

Ivanov, V.N., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.675-678, For Russian original see 28-1196. 3 refs.

DLC GB641.16 1973a

Pavements, Surface temperature, Heat transfer, Permafrost, Airports, Roads.

33-258

Numerical solution of problems of the Stefan type for atmosphere-ground-structure systems.

Pal'kin, I.U.S., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.678-680, For Russian original see 28-1197. 7 refs.

DLC GB641.16 1973a

Stefan problem, Permafrost thermal properties, Surface temperature, Heat transfer, Permafrost beneath structures.

- 33-259**  
Processes of heat and moisture exchange in flooding of meadows in Central Yakutia.  
Gavril'ev, P.P., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.680-682, For Russian original see 28-1198.  
DLC GB641.16 1973a  
Irrigation, Meadow soils, Heat transfer, Soil moisture, Permafrost.
- 33-260**  
Basic results of research in the field of permafrost for the period from 1963 to 1973 and the prospects for its development.  
Mel'nikov, P.I., International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.687-697, For Russian original see 30-1509.  
DLC GB641.16 1973a  
Geocryology, Surveying, Ground ice, Drilling, Permafrost, Earthwork, Construction, Buildings, Pipelines.
- 33-261**  
Thermophysical principles of the formation of permafrost.  
Porkhaev, G.V., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.697-706, For Russian original see 30-1510. 45 refs.  
Balobaev, V.T.  
DLC GB641.16 1973a  
Permafrost origin, Permafrost structure, Ground ice, Ice growth, Frost penetration, Heat transfer, Mass transfer, Bibliographies.
- 33-262**  
Regional laws of the development of permafrost in the USSR.  
Grave, N.A., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.707-712, For Russian original see 30-1511.  
Baulin, V.V.  
DLC GB641.16 1973a  
Tectonics, Permafrost origin, Permafrost distribution, Permafrost structure, Permafrost thermal properties.
- 33-263**  
Genesis, composition and structure of permafrost and ground ice.  
Popov, A.I., et al, International Conference on Permafrost, 2nd, Yakutsk, July 13-18, 1973. Proceedings. Edited by F.J. Sanger and P.J. Hyde, Washington, D.C., National Academy of Sciences, 1978, p.713-724, For Russian original see 30-1512. 53 refs.

Slope processes in the central area of the Baykal Amur railroad. (Sklonovye protsessy na tsentral'nom uchastke BAM). Shchepelev, A.M., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.30-42, In Russian. Mountains, Snow cover distribution, Avalanches formation, Avalanche triggering, Earthquakes, Geomorphology, Climate, Slope processes, Talus, Avalanche engineering, Tunnels, Soil creep, Baykal Amur railroad.
- 33-315  
Graphs for designing cave-in control means for rock excavations. (Proektirovanie protivooval'noi zashchity v skal'nykh vyemkakh s pomoshch'yu grafikov). Kozhevnikov, A.N., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.43-56, In Russian. Railroads, Earthwork, Rock excavation, Slope processes, Slope stability.
- 33-316  
Influence of climatic factors on service life of concrete structures. Criteria of climatic severity. (Vlianie klimaticheskikh vozdeystviy na dolgovechnost' zhelezobetonnykh konstruktov). Kriterii surovosti klimata). Aktuganov, I.Z., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.57-69, In Russian. 4 refs. Concrete structures, Frost resistance, Concrete freezing, Freeze thaw cycles, Concrete strength, Loads (forces), Analysis (mathematics).
- 33-317  
Deformations and failures of small structures under various natural and climatic conditions. (Deformatsii i povrezhdeniia malyykh iskusstvennykh sooruzheniy v spektre prirodno-klimaticheskikh vozdeystviy). Borovik, G.M., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.70-79, In Russian. 13 refs. Smyshl'ev, B.N. Railroads, Bridges, Hydraulic structures, Culverts, Permafrost beneath structures.
- 33-318  
Reinforced concrete bridge spans in the eastern part of the Baykal Amur railroad area. (Zhelezobetonnye proletnyye stroeniya mostov vostochnogo uchastka BAM). Zdor, V.S., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.80-85, In Russian. Concrete structures, Bridges, Reinforced concrete, Cements, Concrete freezing, Frost resistance, Tests, Loads (forces), Measuring instruments.
- 33-319  
Evaluating the reliability of the design of engineering structures for frost heave. (Otsenka nadezhnosti raschetov iskusstvennykh sooruzheniy na vypuchivanie). Dmitriev, I.U.V., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.86-95, In Russian. 19 refs. Smyshl'ev, B.N. Railroads, Permafrost beneath roads, Frost heave, Design.
- 33-320  
Influence of maintenance on the bearing strength of reinforced concrete bridge spans under severe climatic conditions. (Vlianie tekushchego soderzhaniiya v usloviyakh surovogo klimata na gruzopod'emnost' zhelezobetonnykh proletnykh stroeniy). Shirokov, I.U.M., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.96-100, In Russian. 5 refs. Railroads, Bridges, Concrete structures, Reinforced concrete, Concrete freezing, Frost shattering.
- 33-321  
Influence of severe climatic conditions on the performance of tunnel structures and the determination of design air temperatures in tunnels. (Osobennosti proiavlenniya surovogo klimata na rabotu tunnel'nykh konstruktov i opredelenie raschetnoi temperatury vozdukh v tunnel'nykh). Glavatskikh, V.A., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.101-106, In Russian. Permafrost beneath structures, Tunnels, Linings, Hydraulic structures, Baykal Amur railroad, Design.
- 33-322  
Deterioration of reinforced concrete bridge spans in Siberia. (Razrushenie betona zhelezobetonnykh proletnykh stroeniy, ekspluatiruemyykh v Sibiri). Shirokov, I.U.M., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.107-112, In Russian. 9 refs. Bridges, Reinforced concrete, Concrete freezing, Frost shattering, Frost resistance.
- 33-323  
Construction of buildings on the Baykal Amur railroad (discussion). (K voprosu o stroitel'stve zdaniy na BAM (v poriadke obsuzhdeniya)). Chushniakov, V.F., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.113-118, In Russian. Buildings, Permafrost beneath structures, Baykal Amur railroad, Design, Earthquakes, Snow loads.
- 33-324  
Using balloons in railroad construction under difficult conditions. (Nekotoryye voprosy primeneniya aerostatov pri stroitel'stve zheleznykh dorog v slozhnykh usloviyakh). Kabaev, V.A., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.119-123, In Russian. Levenson, I.A.S., Novikov, V.A., Reutskiy, A.P. Transportation, Balloons, Baykal Amur railroad.
- 33-325  
Local sources of sand and gravel for the construction of the Kumerma-Chara section of the Baykal Amur railroad (263-994 km). (Voprosy obespecheniya konditsionnymi peschanyimi i gravelnymi materialami iz mestnykh mestorozhdeniy stroitel'stva BAM na uchastke Kumerma-Chara (263-994 km)). Miroshnik, B.E., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.132-141, In Russian. Construction materials, Sands, Gravel, Mining, Baykal Amur railroad, Permafrost.
- 33-326  
Tables of ordinates of binomial confidence curves for finding avalanche ejection distances. (Tablitsa ordinat binominal'noi krivoi obespechenosti dlia nakhozheniya dalechnosti vyboza laviny). Konstantinov, V.M., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.152-162, In Russian. 4 refs. Lebedeva, G.I. Avalanche engineering, Avalanche mechanics, Avalanche forecasting, Analysis (mathematics).
- 33-327  
Selecting the means of road protection against snowdrifts. (K vyboru sredstv zashchity avtomobil'nykh dorog ot snezhnykh zanosov). Zhilin, A.M., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1976, Vol.176, p.163-176, In Russian. 4 refs. Isaenko, E.P., Isakov, L.M. Roads, Snowdrifts, Snow accumulation, Snow fences, Baykal Amur railroad, Snowstorms, Wind factors.
- 33-328  
Designing railroads for complicated physiographic conditions. (Proektirovanie zheleznykh dorog v slozhnykh fiziko-geograficheskikh usloviyakh). Diunin, A.K., ed, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, *Novosibirsk*, 1977, 129p., In Russian. For selected papers see 33-329 through 33-338. Refs. passim. Railroads, Embankments, Permafrost beneath structures, Permafrost hydrology, Avalanches, Avalanche engineering, Snow cover structure, Metamorphism (snow).
- 33-329  
Wind effect on the metamorphism of snow cover. (K voprosu o vlianii vetra na metamorfizm snezhnogo pokrova). Diunin, A.K., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.3-18, In Russian. 8 refs. Snow cover structure, Firn stratification, Metamorphism (snow), Heat transfer, Mass transfer, Mathematical models.
- 33-330  
Experimental studies of snow structure changes in wind tunnels. (Eksperimental'nye issledovaniya izmeneniya struktury snega v aerodinamicheskoy kanale). Diunin, A.K., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.19-25, In Russian. 5 refs. Metamorphism (snow), Snow cover structure, Wind tunnels, Test equipment, Laboratory techniques.
- 33-331  
Economic basis for the dates and organization of the Surgut-Urengoi railroad construction. (Ob ekonomicheskoy obosnovanii organizatsii i srokov stroitel'stva zheleznoi dorogi Surgut-Urengoi). Lazebnikov, I.U.S., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.26-32, In Russian. 4 refs. Railroads, Permafrost beneath roads, Cost analysis.
- 33-332  
Calculating avalanche pressure against an obstacle. (Raschet davleniya laviny na prepyatstvie). Isaenko, E.P., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.33-39, In Russian. 7 refs. Avalanche engineering, Avalanche formation, Snow density, Snow surveys, Avalanche pressure, Analysis (mathematics).
- 33-333  
Evaluating snow transfer in mountainous areas of the Sakhalin railroad. (Otsenka snegopereenos na gornyykh uchastkakh zheleznodorozhnogo puti na Sakhaline). Marin, I.U.A., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.51-56, In Russian. 7 refs. Railroad tracks, Snow cover distribution, Snowdrifts, Snow accumulation, Railroads, Mountains.
- 33-334  
Theoretical models of snow and avalanches. (O teoreticheskikh modeliyakh snega i laviny). Fomin, A.G., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.57-67, In Russian. 24 refs. Slope processes, Mathematical models, Avalanche mechanics, Snow cover distribution, Avalanche formation, Snow depth, Snow cover structure, Avalanche engineering.
- 33-335  
Interaction between experimental embankments and ice-saturated bearing ground at the Baykal Amur railroad during the initial construction stage. (Vzaimodeystvie opytnykh nasypov s l'donasyshchennymi gruntami osnovaniy na BAME v nachal'nyi period stroitel'stva). Orlov, E.P., et al, *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.68-75, In Russian. Tsernant, A.A., Gordienko, A.A. Embankments, Permafrost beneath structures, Ground ice, Frost heave, Settlement (structural), Baykal Amur railroad, Freeze thaw cycles.
- 33-336  
Thermophysical calculation of heating devices designed for melting snow. (Teplofizicheskiy raschet obogrevayushchikh ustroystv prednaznachennykh dlia snegotaianiya). Al'tshuler, Z.E., *Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. Trudy*, 1977, Vol.184, p.75-86, In Russian. 11 refs. Railroad tracks, Snow accumulation, Deicing, Snow melting, Electric heating.

- 33-337  
Present state of snow science as reflected in the last international glaciological conferences. (Sovremennoe sostoyanie snegovedeniia, otrazhennoe na poslednikh mezhdunarodnykh gliatsiologicheskikh soveshchaniakh). Kvon, I.A.D., Novosibirsk. Institut inzhenerov zheleznodorozhnogo transporta. - Gartner, K.E., Guymon, G.L.  
Mathematical models, Soil moisture migration, Heat transfer, Frost heave, Frost penetration.
- A mathematical model of coupled heat and moisture flow in soils has been developed. The model includes algorithms for phase change of soil moisture and frost heave, and several types of boundary and initial conditions are permitted. The finite element method of weighted residuals (Galerkin procedure) was chosen to simulate the spatial regime and the Crank-Nicolson method was used for the time domain portion of the model. Comparison of simulated and experimental data illustrates the importance of unsaturated hydraulic conductivity. It is one parameter which is difficult to measure and for which only a few laboratory test results are available. Therefore, unsaturated hydraulic conductivities calculated in the computer model may be a significant source of error in calculations of frost heave.

Hnatiuk, J., Kovacs, A.  
Sea ice, Pressure ridges, Ice models.  
The ice cover in the Beaufort Sea is characterized by extreme irregularities in thickness which are produced by the motion and resulting deformation of the sea ice. Pressure ridges, which are an integral part of this irregular and formidable ice cover, are recognized as the largest and most hazardous ice formations. Here, a number of cross-sectional profiles of first and multi-year pressure ridges in the Beaufort Sea are presented, which include both free-floating and grounded ice forms. The cross-sections of these multi-year ridges suggest that they can be adequately described by one ridge model with a constant sail to keel ratio and geometry. It is shown that the ice comprising multi-year ridges is solid, with the interblock voids existing at the time of their formation being completely filled with ice. Several first-year pressure ridge profiles are also discussed, which indicate that these ridges cannot be represented by any one geometric model as their sail to keel ratios and geometries are quite variable.

Ice cover effect, Ice navigation, Sediment transport.  
This paper examines the hydrodynamics of vessel passage through a restricted channel and the resulting potential for sediment translocation. Examples of field measurements are presented which show a complex pattern of changes in water current magnitude and direction. The constriction of the channel by a ship creates a drop in the water surface that travels with the ship. The application of the concepts of effective stress and upward seepage forces to the river-bed material predicts that the potential for sediment translocation increases upon the passage of this moving trough. Three modes of granular bottom sediment transport were observed: bed load, saltation, and a process referred to as explosive liquefaction.

River ice, Ice floes, Bridges, Piers, Ice pressure, Ice models, Ice deformation.  
A model study of the formation of ice arching at the upstream faces of rounded bridge piers was conducted in a hydraulic flume. Polyethylene plastic was used to simulate square ice floes of two sizes, 37 mm and 74 mm. A power function relating the upstream surface ice concentration to a size ratio (characteristic block size over pier span opening) distinguishes between the arching and non-arching conditions at velocities below the critical value for overturning of individual ice floes.

Calkins, D.J.  
Frazil ice, Ice formation, Turbulent flow, Supercooled water, Ice nuclei.  
To study ice nucleation and heat transfer, frazil ice was produced experimentally under controlled conditions. Turbulence was generated by a moving grid in a turbulence jar, where water could be cooled below the freezing point. Frazil was observed by means of a schlieren system and the number of ice particles was counted on photographs. No frazil ice formed, regardless of turbulence and foreign material, unless the water was seeded with ice nuclei. The number of particles grew during the experiment; the growth rate increased with greater supercooling and higher velocity of the grid. This indicates a multiplication process induced by secondary nucleation. The heat transfer per particle normalized with supercooling, and the size of the particles was constant in all experiments within the accuracy of measurement. From these observations, it can be concluded that the total ice production is predictable if the heat transfer per particle can be estimated from turbulence data and if the number of particles can be calculated. A nucleation theory is, however, not available and is regarded as the crucial question.

Ice booms, Floating structures.  
The ability of an ice boom timber to restrain ice floes is governed by its capacity to float and to resist being overturned. Six mathematical equations that describe this capacity for a rectangular-shaped timber have been worked out and are presented here. The limits of each equation are also given. They are called righting moment equations, and from them dimensionless values of righting moment may be calculated. The equations have been evaluated for some general conditions, and for a few specific cases involving water and wood, and for one case concerned with designing a steel pontoon boom. The calculations were done by a computer program which is not included. The data provided include three graphs and two tables of dimensionless values. All in all, the information should be very useful in evaluating new designs of ice boom timbers and pontoons.

Ashton, G.D.  
Floating ice, Water intakes, Water flow.  
Results of a series of laboratory experiments in a flume to determine the conditions under which floating ice floes are entrained into a submerged outlet are reported. Entrainment is found to occur when a Froude number based on outlet velocity and submergence depth is exceeded and that critical Froude number is a function of the ratio of outlet height to upstream flow depth. The critical Froude number is also shown to asymptotically approach the Froude number corresponding to equilibrium accumulation thicknesses of ice floes at a surface obstruction as the outlet height approaches the flow depth. Interpretation and application to design of submerged outlets is discussed.

Sea ice, Drift, Wind velocity, Channels (waterways), Ice models.  
Models originally developed to describe the arching and the movement of granular materials through hoppers or chutes are applied to arching and drift of pack ice in straits and gulfs having lengths of 50 to 300 km. Verification of the usefulness of the models is attempted by making comparisons with ice deformation patterns as observed via satellite imagery in the Bering Strait region and in Amundsen Gulf. The results are encouraging in that there is good correspondence between observed arching and lead patterns and those predicted by theory. In addition, values determined via the model for the angle of internal friction and the cohesive strength per unit thickness are similar to values obtained by other approaches. It is estimated that if the wind velocity parallel to the Bering Strait exceeds 6 m/s, there will be ice flow through the strait. A one-dimensional formulation is presented, governing the ice pressure in a straight channel when the ice is stationary due to an ice arch or a boom.

Laboratory tests, using a modern 10,000 kg load capacity Materials Testing System, were conducted on shallow, undisturbed snow samples under uniaxial load to determine the stress vs. density and stress vs. deformation (pressure-sinkage) relationships as influenced by the rate of deformation, temperature and initial density in the pressure range of 0.1 to 75 kg/sq cm. The pressure-sinkage relationships of undisturbed snow on a rigid base are shown and discussed for various temperature, deformation rate, and initial density conditions.

Cooperation in water resources programs: Alaska's example. Slaughter, C.W., et al, *Water resources bulletin*, Aug. 1974, 10(4), MP 740, p.802-812, 9 refs.

Freeman, T.G., Audsley, G.L.  
Natural resources, Water supply, Research projects. Alaska possesses a diversity and magnitude of water resources unmatched in any other state. With over 15% of the area of the whole United States, and 40% of the nation's total fresh water supply, but an extreme lack of basic hydrologic and

climatologic data, cooperation among agencies and individuals concerned with evaluating, planning, and carrying out water resources programs is essential. Toward this end, the Inter-Agency Technical Committee for Alaska (IATCA) was established under charter from the Water Resources Council. Representation in IATCA includes virtually all Federal, State, and academic entities in Alaska having an interest in the water resources of the State. Existence of IATCA has permitted or facilitated numerous Alaskan water resources programs. Several are described briefly in this paper.

33-493

Frost resistant stabilization of frost susceptible gravel and sand mixtures. (Frostbeständige Verfestigung frostempfindlicher Kies-Sand-Gemische). Jessberger, H.L., et al, Bochum, West Germany, Ruhr University, 1977, 150p. + 300p. append., In German. 23 refs.

Iceberg calving from floating glaciers by a vibrating mechanism. Holdsworth, G., et al, *Nature*, Aug. 3, 1978, 274(5670), p.464-466, 18 refs.  
Glynn, J.  
Icebergs, Calving, Glacier tongues, Ice elasticity. Observations of antarctic super tabular icebergs have shown that their origin can frequently be traced to previously existing super ice tongues, which are a class of massive seawards-extending ice shelves. A mechanism for generating significant bending stresses at locations along an ice tongue far from the grounding zone is, by vibration of the glacier, in a mode higher than the fundamental. In this report, an approximate analysis of the modes of free vibration of a buoyant, elastic, tapering ice tongue floating in shallow water of variable depth is outlined. It is suggested that the proposed vibration mechanism, although normally giving rise to weak bending stresses, may, under high incident wave energy, cause calving.

Inland ice sheet thinning due to Holocene warmth. Whillans, I.M., *Science*, Sep. 15, 1978, 201(4350), p.1014-1016, 13 refs.  
Ice sheets, Ice temperature, Ice volume, Paleoclimatology. The climatic warming of 10,000 years ago is now affecting the central portions of ice sheets, causing ice-flow acceleration. This process explains the present-day thinning of the ice sheet in West Antarctica. Former ice sheets must have also responded to climatic warming with a delay of thousands of years. This lag in response is important in the climatic interpretation of glacial deposits and of changes in ice volume obtained from deep-sea cores. (Auth. mod.)

Ground thawing, Frozen ground settling, Soil stabilization, Settlement (structural), Permafrost beneath structures, Thawing rate, Soil creep, Frozen ground mechanics. Permafrost settlement is decisive in planning for permanent structures; therefore, consolidation studies were carried out. Consolidation depends more on ice content than on load. The process is dependent on the thawing rate in proportion to the square root of t. Secondary consolidation depends mainly on the type of soil. Residual pressure may be produced by filtration consolidation. Thawed soil deformation obeys laws of one-phase creep theory.

Rock mechanics, Measuring instruments, Stress concentration, Vibration, Strain tests. This paper describes an elastic inclusion type gauge developed to monitor stress changes around underground excavations. Deformation of the gauge body resulting from changes of stress in the surrounding rock mass is measured as a change in the vibration period of a highly tensioned wire strung diametrically across the body. It is shown that the gauge readings are relatively unaffected by rock modulus. Techniques for evaluating uniaxial and biaxial stress changes are described.

The Ice Core Laboratory (ICL) of the Department of Geological Sciences, State University of New York at Buffalo (SUNYAB), has developed an information storage and retrieval system for ice core data obtained from the Greenland Ice Sheet Program (GISP) and the Ross Ice Shelf Project (RISP) field and laboratory studies. This system was developed to provide a rapid review of up-to-date fundamental measurements for each ice core that is acquired, stored and sampled at ICL/SUNYAB, and to make copies of these data available for distribution to all interested investigators. It is the purpose of this report to describe the ice core data bank program and the operational procedures for operators at the SUNYAB computer facilities. (Auth.)

Effect of waste water reuse in cold regions on land treatment systems.  
Iskandar, I.K., *Journal of environmental quality*, July-Sep. 1978, 7(3), MP 1144, p.361-368, 26 refs.  
Water treatment, Waste disposal, Cold weather tests, Soil chemistry.  
The effect on ground water quality and soils and vegetation of treatment and disposal of municipal/industrial waste water on land in cold regions was investigated using six outdoor test cells. Winter application of waste water was feasible even at very cold air temperatures (<0°C) at the New Hampshire test site. High NO<sub>3</sub>-N concentrations were observed in all treatments (5-15cm/week) in both soils in early summer. This was explained as leaching of NH<sub>4</sub>-H stored over the winter months after its oxidation to NO<sub>3</sub> in early spring. The principal mechanism for nitrogen removal was found to be plant uptake, which was seasonally dependent. Application of 15 cm of secondary effluent per week to a sandy loam soil was not feasible because of the presence of > 10mg/liter NO<sub>3</sub>-N in the leachate for > 9 mo/year. Application of salts for road deicing during winter resulted in relatively higher concentrations of salts and Cl in the ground for a short period of time.

Fort Greely Military Reservation snow surveys, 1968-1969. Freeman, T.G., MP 125, May 1969, 21p., No microfiche available.  
Snow surveys, Snowdrifts, Snow density, Snow depth, United States—Alaska—Fort Greely.  
Measurements at four snow courses and 10 snow stakes within the Fort Greely, Alaska, Military Reservation were made once each month (except January) between November and May of 1968-69. The snow depths in Fort Greely ranged between 3M at a snow stake site in Nov. 1968 to 26M at another such site in Mar. 1969. Snow drifting was slight until after Feb. 1, and the snow cover densities were low (between 12 and 18 gm/cu c) until Mar. 1. Snowdrift patterns, except in the forested region in the northern section of the Reservation, began to develop after Feb. 1. In the exposed higher region where trees were sparse, the snow was blown clear but hard drifts were noted on the lee side of hill or behind brush. Twenty-four ice thickness measurements were made on Bollo Lake in Fort Greely during the winter of 1968-69. The thicknesses ranged from 7" in Nov. to 40-41" in Feb. and Mar. and because of exposure to the wind very little snow accumulated on the ice.

Glacial features, Ice tunnels, Glacial deposits, Ice plasticity, Ice deformation, Measurement, Measuring instruments.  
A new method for measuring ice tunnel deformation and closure is described. It includes cutting slots into a smooth vertical wall, forcing wet dyed string into the slots, sand it in. Results of one year's installation are given for each of 13 grids installed throughout a 366 m. ice tunnel. Two important visual observations are reported. The first is that no differential shearing was found; and the second, that heavy dirt bands that occurred throughout the tunnel appeared to have extruded into the tunnel opening. A possible explanation is that dirty ice is more plastic than clear ice.

Current status of arctic and antarctic research and prospects for further development. (Sovremennoe sostoyanie issledovaniy v Arktike i Antarktike i perspektivy ikh dal'nishnego razvitiya). Treshnikov, A.F., et al, *Problemy Arktiki i Antarktiki*, 1978, No.54, p.5-15, In Russian.  
Shamont'ev, V.A.  
Research projects.  
The scientific and engineering activities of the Arctic and Antarctic Institute in Leningrad for 1971-75 are reviewed; the aim of this program is to investigate fully the natural conditions and resources of southern and northern polar regions. The scientific concern of the Institute during the 10th 5-Year Plan is to study large-scale variations in the hydrometeorological regime around both poles. From 1976-1980 its area of concentration will be prediction of changes in the environment and natural phenomena and hydrometeorological support for arctic navigation. The POLEX program will remain a top priority.

Research projects.  
The main results of studies carried out recently in north and south polar regions under the POLEX program are presented. Full-scale POLEX-North-76 and the Southern Ocean experiments of similar importance are described in the greatest detail. Research topics to be incorporated into POLEX plans for the future are also outlined. A proposal for an international "Southern Ocean" program is offered.

Water vapor, Adsorption, Low temperature tests, Clay minerals, Mars (planet).  
A large amount of interest has recently been expressed pertaining to the quantity of physically adsorbed water by the Martian regolith. Thermodynamic calculations based on experimentally determined adsorption and desorption isotherms and extrapolated to subzero temperatures indicate that physical adsorption of more than one or two monomolecular layers is highly unlikely under Martian conditions. Any additional water would find ice to be the state of lowest energy and therefore the most stable form. To test the validity of the thermodynamic calculations, we have measured adsorption and desorption isotherms of sodium montmorillonite at -5°C. To a first approximation it was found to be valid.

Physical measurements of river ice jams.  
Calkins, D.J., *Water resources research*, Aug. 1978, 14(4), MP 1159, p.693-695, 5 refs.  
River ice, Ice jams, Measurement, Ice cover thickness.  
River ice jam measurements have always been relatively difficult to obtain because of the uncertain stability of the floating ice mass. But recently two ice jams resolidified for about 3 weeks, allowing the ice thickness to be measured at several cross sections along their longitudinal profiles. The size distribution of surface ice floes in one of the jams was also evaluated from low-level aerial photography. The ice jams were found to be thickest at the downstream end, of the order of 4-5 times the thickness of the ice cover before breakup, and decreased almost linearly in thickness upstream. The largest surface ice floes measured in one ice jam ranged from 0.27 to 0.05 of the river's average width (45m). The largest floes were at the downstream end, and floe size decreased progressively with distance upstream.

Eaton, R.A., Stubstad, J.  
Freeze thaw tests, Roads, Subgrade preparation, Protective coatings, Dynamic loads.  
Road test sections of impermeable membrane-enveloped silt and clay soils overlain with asphalt cement concrete were subjected to repetitive dynamic plate-bearing loadings to determine strength variations of the pavement systems during freeze-thaw cycles. The modulus values of the asphalt cement concrete vary inversely with its temperature by an order of magnitude in the temperature range of 110°F to 30°F. The resilient stiffness of the pavement system varied in the same manner by nearly a factor of eight. Despite the wide strength variations of the sections during freeze-thaw cycles, membrane enveloped fine-grained soils can be utilized instead of granular materials as base and subbase layers in flexible pavements in cold regions where moisture migration is a major concern. Without the membrane protection such fine-grained soils that experience frost heaving suffer severe bearing strength loss during thawing.

State of knowledge on land treatment of wastewater.  
International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire, MP 1145, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, 2 vols., For selected papers see 33-651 through 33-661.  
Meetings, Waste treatment, Water treatment, Agriculture, Forest land, Mathematical models, Land development.  
The objectives of this Symposium are to summarize the state of knowledge of the practical aspects of the treatment of wastewater by land application and to identify the suitable approaches for the design of such land treatment systems. The topics included are: site selection considerations, case studies of national and international concern, health effects of land treatment systems, pretreatment considerations, uses of wastewaters in agricultural and forest systems, monitoring, modeling and design criteria. The Proceedings are published in two volumes. Volume 1 contains the invited papers presented and discussed at the conference. Volume 2 contains shorter papers about ongoing research that were selected from the responses received following a call for abstracts.

Use of remote sensing techniques and other information sources in regional site selection of potential land treatment areas.  
Merry, C.J., MP 1146, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.107-119, 27 refs.  
Site surveys, Water treatment, Waste treatment, Remote sensing, Spaceborne photography.  
Landsat, Skylab S190A Multispectral Photographic Camera, and Skylab S190B Earth Terrain Camera satellite data products, enlarged to scales of 1:500,000 and 1:250,000, were used to prepare land use maps for regional site selection of potential land treatment areas. Interpretation of tonal and textural characteristics on the photography corresponded to vegetation, ur-

ban and agricultural land use categories. Color and color infrared transparencies augmented the land use mapping, which was accomplished on black and white photographic prints. The three systems are compared in terms of areal coverage, resolution, and time of product preparation.

**Evaluation of the moving boundary theory (Darcy's flow through porous media).**

Nakano, Y., MP 1147, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.142-151, 22 refs.

**Boundary value problems, Soil moisture migration, Porous materials, Analysis (mathematics), Theories.** Traditionally in hydrology and soil physics, neither the water table nor the wetting front in Darcy's flow were believed to be singular surfaces. Recently, a new and conflicting theory has been advanced, using two different approaches. It has been shown, based upon continuum physics, that across both the water table and the wetting front local acceleration generally suffers a non-zero jump, and these two boundaries can be interpreted as acceleration waves. This interpretation was found consistent with reported regularly results obtained from a purely mathematical viewpoint.

33-653

**Evaluation of N models for prediction of NO<sub>3</sub>-N in percolate water in land treatment.**

Iskandar, I.K., et al, MP 1148, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.163-169, 51 refs.

Selim, H.M.

**Water treatment, Soil chemistry, Seepage, Mathematical models.**

Nitrogen simulation models developed to describe one or more processes in agricultural soils can be adopted for land treatment. The most important processes in the simulation of N transformations for prediction of N in percolate water in land treatment are: nitrification, denitrification, plant uptake and exchange of NH<sub>4</sub> with the soil. The N model must be incorporated into a moisture flow model. It was concluded that the Michaelis-Menten type model is the most appropriate, although the first order kinetic may be used to describe the nitrification process. Modeling the denitrification process in slow infiltration must include biodegradable carbon and dissolved oxygen as limiting factors. Although several large models are available to simulate and predict N in leachate in land treatment, a need for a simplified model that can be tested in the field is apparent.

33-654

**Nitrogen behavior in land treatment of wastewater: a simplified model.**

Selim, H.M., et al, MP 1149, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.171-179, 15 refs.

Iskandar, I.K.

**Waste treatment, Water treatment, Soil chemistry, Seepage, Mathematical models.**

A simplified mathematical model was developed to describe transformations and transport of nitrogen under transient soil water flow conditions. Kinetic reactions were assumed to govern the nitrification and denitrification processes. A macroscopic approach was used to incorporate plant uptake of water as well as NO<sub>3</sub>-N and NH<sub>4</sub>-N from the soil solution. The sensitivity of the model to changes in rate of N transformation, N uptake by plants, and schedule and amounts of N application were also investigated. The model can be used as a tool to predict the fate of nitrogen in land treatment systems. The model is flexible and can be adapted to incorporate various nitrogen transformation mechanisms as well as layerings in the soil profile.

**Overview of existing land treatment systems.**

Iskandar, I.K., MP 1150, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.193-200, 34 refs.

**Waste treatment, Water treatment, Soil chemistry, History.**

This paper reviews existing systems of land application of wastewater. Particular emphasis is placed upon the historical philosophy of the utilization of the natural soil-plant system for purifying wastewater, reasons for the success or failure of the older systems, and experience gained from their design, construction and operation.

33-656

**Uptake of nutrients by plants irrigated with municipal wastewater effluent.**

Clapp, C.E., et al, MP 1151, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.1, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.395-404, 21 refs.

Palazzo, A.J., Larson, W.E., Marten, G.C., Linden, D.R.

**Nutrient cycle, Irrigation, Wastes, Water treatment, Soil chemistry.**

We present comparisons of plant nutrient uptake by corn and forage grasses when these crops were irrigated with secondary municipal wastewater effluent or treated with inorganic fertilizer. Characteristic analyses of effluent from various locations are given for the macro plant nutrients as well as for quality indicators. The importance of the presence of varying amounts of N, P, and K in effluent studies is discussed. Micro elements in effluent are considered for their use to meet nutrient requirements of these crops as well as for their potential for environmental contamination.

33-657

**Performance of overland flow land treatment in cold climates.**

Jenkins, T.F., et al, MP 1152, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.2, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.61-70, 15 refs.

Martel, C.J., Gaskin, D.A., Fisk, D.J., McKim, H.L.

**Water treatment, Waste treatment, Soil chemistry, Cold weather performance.**

The objective of this study was to evaluate the performance of overland flow systems, especially during the winter months. Operation of the CRRLE overland flow facility began in May 1977 and continued through the winter of 1977-78. The results of this study indicated that satisfactory BOD removal did not occur at soil temperatures below 4°C. Based on this criterion, 105 days of storage would be needed at the CRRLE site. This is 30 days less than the storage needs predicted by the EPA-1 computer program.

33-658

**Growth and nutrient uptake of forage grasses when receiving various application rates of wastewater.**

Palazzo, A.J., et al, MP 1153, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.2, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.157-163, 10 refs.

McKim, H.L.

**Nutrient cycle, Soil chemistry, Waste treatment, Grasses.**

This study reports on the growth and nutrient removal of forage grasses receiving three years of wastewater application. The forages received wastewater at various application rates and schedules and were grown in either a Windsor sandy loam or a Charlton silt loam soil. Plant and soil analyses were performed on representative samples during the study.

33-659

**Microbiological aerosols from a field source during sprinkler irrigation with wastewater.**

Baum, H.T., et al, MP 1154, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.2, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.273-280, 14 refs.

Brockett, B.E., Schumacher, P.W., Schaub, S.A., McKim, H.L., Bates, R.E.

**Waste treatment, Water treatment, Irrigation, Aerosols.**

Measurements were made of the strength and dispersion of bacterial aerosols resulting from land application of chlorinated, ponded wastewater by spray irrigation. An approximately square 2.1 hectare area was covered by 96 impact sprinklers, thus creating a multi-point or field aerosol source. Visible-type and large volume electrostatic precipitator air samplers were deployed upwind and on 3 m centers in each of three downwind transects. In four runs, water to be sprayed was seeded with fluorescent dye to characterize the aerosol cloud without the effect of biological decay. During aerosol studies, continuous on-site meteorological measurements were made, and wastewater chemical parameters were monitored.

**Computer procedure for comparison of land treatment and conventional treatment: preliminary designs, cost analysis and effluent quality predictions.**

Spaine, P.A., et al, MP 1155, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.2, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.335-340, 4 refs.

Merry, C.J.

**Waste treatment, Water treatment, Computer programs.**

During 1972 a manual for the design of wastewater treatment facilities was developed by the U.S. Army Engineer Waterways Experiment Station. To complement the design manual and assist the field design engineer, the computer model CAPDET (Computer Assisted Procedure for the Design and Evaluation of Wastewater Treatment Systems) was developed. In response to field users' request, a land treatment module was developed and implemented into CAPDET. The CAPDET program provides planning level design and cost evaluations for any wastewater treatment system.

33-661

**Simulation of the movement of conservative chemicals in soil solution.**

Nakano, Y., et al, MP 1156, International Symposium on the State of Knowledge in Land Treatment of Wastewater, Aug. 20-25, 1978, Hanover, New Hampshire. Proceedings, Vol.2, Hanover, U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.371-380, 14 refs.

Iskandar, I.K.

**Soil moisture migration, Soil chemistry, Mathematical models.**

A numerical method is introduced to simulate the movement of conservative chemicals in soil by water. The method is essentially based upon a finite element approximation to the equation of continuity, and each element constitutes a complete mixing cell. The number of cells represents a degree of mixing. The theoretical justification of the method is presented and the accuracy of the method is examined, using experimental data obtained from a large lysimeter. It is found that the method can simulate the general trend of the movement of chemicals reasonably well, but fails to simulate the high frequency of variations that occur near the soil surface.

**Features of summer ice processes in the Pacific sector of Antarctica.** (Ob osobennostyakh ledovykh protsessov v tikhookeanskoy sektore Antarktiki letom).

Lutsenko, E.I., *Leningrad. Arkticheskiy i antarkticheskiy nauchno-issledovatel'skiy institut. Trudy*, 1978, Vol.345, p.133-137, 7 refs.

**Sea ice, Pack ice, Polynyas, Antarctica, South Pacific Ocean.**

Summer sea ice dynamics in the Pacific sector are analyzed and compared with those in the eastern sector. The author concludes that, compared to East Antarctic ice, the Pacific pack is a more intact and cohesive mass with extensive polynyas inside the pack. The polynyas at the divergence, characteristic of East Antarctica, are not found in the Pacific Ocean. The dynamics of the northern edge of the Pacific pack are less pronounced. Polynyas play a large role in sea ice destruction.

33-664

**Thermal stresses near the surface of a glacier.**

Sanderson, T.J.O., *Journal of glaciology*, 1978, 20(83), p.257-283, In English with French and German summaries. 47 refs.

**Glacier ice, Thermal stresses, Glacier heat balance, Temperature variations, Antarctica—George VI Ice Shelf.**

Stresses occur in the uppermost 10 m of a glacier as a result of temperature fluctuations at the surface. A model is set up of a typical year's surface temperature variation, and the progress of temperature waves through the glacier is calculated using Fourier theory of heat conduction. Short-period fluctuations are rapidly attenuated, and at 10 m depth the annual cycle is reduced to 5% of its surface amplitude. As the temperature of the ice varies it undergoes small volume changes; stresses are calculated on the assumption that any tendency of the ice to expand or contract laterally results in the creation of just enough stress to cause the ice to remain unstrained. It is found that in the top 2 or 3 m stresses of thermal origin are generally in excess of those due to gross deformation or overburden pressure. Cracks of thermal origin may be responsible for the initial formation of crevasses, and they also provide an explanation for background noise encountered when seismic shooting at low temperatures. Calculations are made of the strain-rate field surrounding a crack, and it is found that thermal effects can lead to appreciable strain-rate anomalies for strain-rate measurements near cracks. The magnitude of the effect is easily sufficient to account for anomalous fluctuating strain-rates found by workers using wire strainmeters on the Barnes Ice Cap. (Auth. mod.)

Ice cores, Drill core analysis, Mass balance, Ice sheets, Antarctica—Byrd Station.  
The local variability in surface mass balance (net snow accumulation) up-glacier from Byrd Station, Antarctica, is due to the combined effects of year-to-year "climate" variations and of the surface microrelief due to snow drifts and sastrugi. These variabilities are consistent with the variability in surface mass balance obtained from core stratigraphy, and are used in a discussion of the difficulties encountered with the deep Byrd Station core in detecting annual layering by the stable oxygen-isotope ratio and the microparticle concentration techniques. The recognition of annual layers by these techniques requires that the snows of certain seasons be present in the measured section, but near Byrd Station the microrelief is such that summer snow layers are not horizontally continuous and may be absent from a given section. At other sites on ice sheets, where the microrelief is less (less wind activity) or where the surface mass balance is larger, or both, less difficulty is anticipated in using the stable oxygen-isotope ratio and micro-particle-concentration techniques to identify annual layers. Boreholes, Temperature variations, Climate, Antarctica—Antarctic Peninsula.  
Temperatures from 10 m bore holes have been analyzed to determine the spatial variation of mean annual surface temperature over the Antarctic Peninsula. In general there is a decrease in temperature of 0.84 deg per degree latitude southwards combined with an altitude lapse rate of 0.68 deg per 100 m. There is a sharp divide between the continental type climate of the east coast and a maritime climate of the central and western regions. Temperatures are approximately 7 deg lower along the east coast compared with those at sites of a similar altitude and latitude on the west. (Auth.)

Electrical sounding methods applied to ice and glacier research. Results from 1962 to 1965. (Les méthodes électriques de prospection appliquées à l'étude de la glace et des glaciers. Résultats obtenus de 1962 à 1965). Andrieux, P., Comité national français des recherches antarctiques. CNFRA, 1970, No.24, 64p., In French. Refs. p.57-59.  
Ice resistivity, Ice electrical properties, Glacier ice, Sounding, Artificial ice, Greenland, Kerguelen Islands.  
General considerations in electrical prospecting of ice and glaciers are discussed first. Then the results of field studies in Switzerland, the Kerguelen Islands, Greenland, Baffin, Axel Heiberg and Meighen Islands are reported. The second portion of the monograph is concerned with the electrical properties of ice, both that prepared in the laboratory and that found in glaciers in both temperate and polar regions.

Antarctic glaciation and its role in world water regime and climate formation. (Oledeniie Antarkitiki i ego rol' v formirovanii klimata i vodnogo rezhima Zemli (problemy glatsiologicheskikh issledovaniy)). Aver'ianov, V.G., et al, Sovetskaya antarkhticheskaya ekspeditsiia. *Informatsionnyiulleten'*, 1978, No.97, p.6-14, In Russian. 12 refs. Korotkevich, E.S., Kotliakov, V.M.  
Glaciation, Glacial meteorology, Heat balance.
- The history of antarctic glaciation is reviewed and its role in global climatology discussed in order to define the primary research problems and point the way to their resolution. The two major scientific puzzles in antarctic glaciology are the energy exchange between the ice sheet and the atmosphere and ocean, and the water budget of the ice sheet and its possible exploitation for human use. A deeper understanding of paleoclimatology would provide a foundation for long-range weather forecasting and for the evolution of a theory of global climate formation. From a practical viewpoint the goals to be reached in the near future are 1) development of a conservation policy and attendant practices, 2) improved engineering on the ice (construction techniques, for example) and 3) improved drilling techniques to achieve deeper shafts for both glaciological and mineralogical purposes. The expected contributions of the International Antarctic Glaciological Program are outlined.
- 33-735  
Studying the antarctic ice sheet by radio-echo sounding. (Issledovanie lednikovogo pokrova Antarktidy metodami radiolokatsionnogo zondirovaniia). Bogorodskii, V.V., et al, Sovetskaya antarkhticheskaya ekspeditsiia. *Informatsionnyiulleten'*, 1978, No.97, p.104-123, In Russian. 19 refs. Trepov, G.V.  
Ice sheets, Ice dielectrics, Ice cover thickness, Radio echo soundings.  
Studies on the thickness, flow rate, mass balance, and other parameters of the antarctic ice sheet and individual glaciers are reviewed. Also the equipment used is described and its general specifications are given. Results are summarized in charts and further research plans outlined.
- 33-736  
Results of ice sheet vertical structure studies in the Vostok Station area. (Rezul'taty izucheniia vertikal'noi struktury lednikovogo pokrova Antarktidy v raiione stantsii Vostok). Korotkevich, E.S., et al, Sovetskaya antarkhticheskaya ekspeditsiia. *Informatsionnyiulleten'*, 1978, No.97, p.135-148, In Russian. 7 refs.  
Ice sheets, Ice cores, Ice structure, Ice composition, Antarctica—Vostok Station.  
Core studies carried out near Vostok Station are discussed. First, attention is paid to various features of the core itself—deformation of the walls, temperature, etc. The characteristics of the ice are then discussed: density, texture, optical orientation of the crystals, chemical composition, isotope composition, air inclusions, and micropaleontological analysis.

Numerical simulation of the annual cycle of sea ice in the Arctic and Antarctic.

Parkinson, C.L., NCAR cooperative thesis No.46, Columbus, Ohio State University, 1978, 191p., Ph.D. thesis. Refs. p.179-191.

Sea ice, Ice models, Ice cover thickness, Dynamic properties, Thermodynamic properties.

This work describes the construction of and results from a numerical model simulating the yearly cycle of sea ice in both the northern and southern hemispheres. The model employs a rectangular grid with 200 km horizontal resolution, an 8 hr timestep, and four vertical layers—ice, snow, ocean, and atmosphere. Both thermodynamic and dynamic processes are incorporated, the thermodynamics being based on energy balances at the various interfaces and the dynamics being based on the following five stresses: wind stress, water stress, Coriolis force, internal ice resistance, and the stress from the tilt of the sea surface. The model simulates a reasonable yearly cycle of sea ice thickness and extent in both the Arctic and Antarctic. The Antarctic ice grows from a minimum in March to a maximum in late August, while the Arctic ice expands from a September minimum to a March maximum. Overall, both thicknesses and concentrations are greater in the Arctic than in the Antarctic. Maps are presented of modeled thicknesses, concentrations, and velocities, and surface energy budgets are analyzed. (Auth.)

Initial report on geological materials collected at RISP site J9, 1977-78.

Webb, P.N., comp, RISP Technical report 78-1, DeKalb, Northern Illinois University, Sep. 1978, 46p., 9 refs.

Ice shelves, Sediments, Cores, Geology.

This report summarizes the coring operations, field work, laboratory analyses and results obtained by the Ross Ice Shelf Project investigations at Site J9. Eleven gravity cores, ten sparker cores and one bottom dredge sample were obtained at the site during Dec. 1977. Core descriptions, geological site data and the results of paleontological analyses are presented. Preliminary results indicate that fossil-rich mid-Miocene glaciomarine sediments are exposed at the seafloor. There is apparently no Pliocene or Pleistocene exposed at this site, presumably the result of relatively recent grounding and erosion during the latest phase of Ross Ice Shelf history.

33-772

Dissipation of tidal energy by antarctic ice shelves.

Doake, C.S.M., *Nature*, Sep. 28, 1978, 275(5678), 304-305, 17 refs.

Ice shelves, Tides.

The possibility of tidal bending of antarctic ice shelves is examined. Using equations derived by Holdsworth (1977; 31-4440 or F-18701) for surface bending stress, average strain rate and exponential damping factor, the dissipation rate for tidal bending of antarctic ice shelves is estimated to be  $2.0 \times 10^{12}$  W. The uncertainties associated with this figure are discussed. Within the constraints imposed by the lack of data, it is suggested that extensive glaciation occurs in the periods preceding "turning points", when the Earth increases its spin velocity.

33-773

Melting of antarctic icebergs.

Donaldson, P.B., *Nature*, Sep. 28, 1978, 275(5678), p.305-306, 13 refs.

Icebergs, Ice melting, Sea water, Salinity, Calving.

This note reports some initial studies of iceberg melting relevant to towing proposals. If under-sea melting is an important ablation mechanism, then one or more of the following three effects might be detectable. (1) The lighter freshwater could rise up the sides of the iceberg with little mixing to produce a pool of less saline water. If this happens, then it would be possible for meltwater to be collected in warm waters by building a shallow pen around the iceberg. (2) The lighter freshwater may entrain warmer, saltier water from the surrounding sea and thus be responsible for considerable vertical transport of deep water and nutrients. (3) Melting could occur in a stratified manner and the freshwater may then disseminate in layers. Thus evidence of gross salinity variation near an iceberg would support mechanism (1), and a temperature rise would support mechanism (2). To test for these two mechanisms, salinities were measured around three icebergs in the northern Ross Sea/Southern Ocean. Mechanism (3) suggested only recently, was not tested. No variation of salinity with distance from icebergs was found. A temperature inversion at a depth of 50-60 m around iceberg no. 3 was recorded, but this extended for at least 2 km. It is suggested that calving is probably the most important ablation mechanism in both northern and southern waters.

Australia may benefit as iceberg idea is refloated. *World water*, June 1978, p.32-34.

Icebergs, Water supply, Ice (water storage).

This discussion focuses on various aspects of the studies being conducted by Iceberg Transport International (ITI) chaired by Prince Faisal of Saudi Arabia, on the feasibility of towing antarctic icebergs. ITI has earmarked Bouvet I. and Australia's Heard I. as pick-up fields for tabular icebergs. An estimated 3-mo journey would bring them to the Australian coast where the best reception sites discovered so far—determined by depressions in the continental shelf sufficient to allow passage of the bergs' huge draught—are 35 km from Robe in South Australia and Rottnest I. in Western Australia. Further surveying will determine the feasibility of other sites. Proposed methods for locating and insulating icebergs, and delivering the water to shore are outlined. The utilization of iceberg water to fill oil tankers returning to Saudi Arabia from South African ports is briefly considered, as are the legal, ecological, and economic aspects of iceberg transport.

33-778

Icebergs to Arabia.

Dodson, R.H.T., *Focus*, Sep.-Oct. 1978, 29(1), p.10-16, 5 refs.

Icebergs, Ice (water storage), Insulation, Water supply, Economic development, Iceberg towing.

The prospect of transporting icebergs from Antarctica as a means of relieving the world's fresh water shortage is examined. Iceberg supply, towing methods, towing dynamics, the problem of insulation, the potential of icebergs for generating electric power, and the economics of such a venture are discussed. Prince Mohammed al-Faisal of Saudi Arabia is committed to backing the necessary research, and is dedicated to the idea that iceberg water can be practical, not only for the Middle East but for Australia, California, Chile and other developing countries as well. Prince Faisal has formed a group called Iceberg Technology International, headquartered in Paris, to pursue his goal.

Meteorological problems of the Southern Ocean. (Meteorologicheskie problemy IUzhnogo okeana). Voskresenskii, A.I., Sovetskaiia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten', 1978, No.98, p.5-15, In Russian. 21 refs.  
Atmospheric circulation, Heat balance, Ice air interface.  
A review of major meteorological features of the Southern Ocean area is undertaken with a view to identifying problems requiring further research. The following topics are offered as bases for international efforts in the meteorological study of the Southern Ocean: circulation and heat exchange mechanisms over Antarctica; estimates of magnitude and temporal and spatial variability of advective heat flow, humidity and energy exchange and their balance; radiation balance research and establishment of standard actinometric atmospheric information so that non-adiabatic components of temperature change can be assessed; relative effect of land and sea on climate; variability of physical mechanisms such as aerosols, ice and snow and their effect on climate; and development of climatic and atmospheric circulation models for forecasting purposes.

Characteristics of Antarctic coastal pack ice formation. (Nekotorye osobennosti obrazovaniia i formirovaniia mnogoletnego priipaia u poberezh'ia Antarktidi). Kozlovskii, A.M., Sovetskaiia antarkticheskaia ekspeditsiia. Informatsionnyi biulleten', 1978, No.98, p.35-42, In Russian. 8 refs.  
Sea ice distribution, Ice structure, Pack ice, Ice salinity, Antarctica.  
First-year ice is compared with multi-year pack ice in terms of its formation, crystal structure, thickness, salinity, density, and other features. It appears that in nearly all respects, they differ, older pack ice sharing its characteristics with shelf ice, whose formation and conditions it resembles more than it does the formation and physical characteristics of first-year pack.

Bedrock topography of Ampère Glacier (Kerguelen Islands, T.A.A.F.). (Topographie sous-glaciaire du Glacier Ampère (Îles Kerguelen, T.A.A.F.)).  
Vallon, M., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1977 (Pub. 1978), 13(1/2), p.37-55, In French with English and German summaries. 15 refs.  
Subglacial observations, Glacier beds, Seismic reflection, Seismic refraction, Topographic surveys, Kerguelen Islands.  
A seismic reflection survey with a TRIO SX 12, a seismic refraction equipment for civil engineering, gives the topography of the bedrock under 100 to 650 m of Ampère Glacier, Kerguelen Is. With geophones placed in an hexagonal pattern, each shot gives 2 independent reflecting elements. A simple method to calculate errors on each of the 3 coordinates of each mirrorpoint is given. The velocity of P-wave is 3730 m/s parallel to the surface of the glacier, a little faster for an angle of incidence of 45 deg, a little slower for the other orientations. There is no intermediate layer between the ice and the bedrock. Depths reach 200 m under sea level at 6 km of the snout.
- 33-878**  
Mass balance and recent fluctuations of Ampère Glacier (Kerguelen Islands, T.A.A.F.). (Bilan de masse et fluctuations récentes du Glacier Ampère (Îles Kerguelen, T.A.A.F.)).  
Vallon, M., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1977 (Pub. 1978), 13(1/2), p.57-85, In French with English and German summary. 38 refs.  
Glacier mass balance, Glacier oscillation, Glacier ablation, Kerguelen Islands.  
From 1970 to 1974 the equilibrium line of Ampère Glacier, Kerguelen Is., was near 700 m a.s.l., the ablation gradient being 0.02 m w.e./m. During these four years the tongue had been thinning from 2 to 5 m each year. From 1962 to 1974 the snout receded about 25 to 50 m each year, and it is possible that the recession had been going on since 1910. In the accumulation area, between 450 and 1050 m a.s.l., the mean balance is 1.9 m of ice/year.

Comparison of energy balance measurements at two stations on the Ampère Glacier (Kerguelen Islands). (Etude comparative du bilan thermique en deux stations du Glacier Ampère (Îles Kerguelen)).  
Poggi, A., *Zeitschrift für Gletscherkunde und Glazialgeologie*, 1977 (Pub. 1978), 13(1/2), p.87-97, In French with English and German summaries. 12 refs.  
Glacier heat balance, Wind factors, Air temperature, Wind direction, Kerguelen Islands.  
This paper presents the results of energy balance studies of two stations at Ampère Glacier, Kerguelen Is. Linear regressions have been established for the data of the two stations (temperature, vapor pressure, their vertical gradients, net radiation and friction velocity). The wind profiles of the lowest 4 m become logarithmic if a certain displacement height of the instruments is allowed for. The values of friction velocity are closely dependent on this displacement height and on wind direction. Energy fluxes are expressed in terms of wind speed, temperatures and vapor pressure at one level.

Sovetskaya antarkticheskaya ekspeditsiya, *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.1-70, In Russian.  
Sen'ko, P.K., ed.  
Research projects, Glaciology, Ships, Antarctica, Sea ice.  
This overview of the 18th SAE is divided into three sections. First, administrative and logistic aspects of the expedition are described. Then scientific efforts based on board the Ob' and the Professor Zubov, such as aerometeorological study, satellite observations, ice studies, oceanographic research and vessel hull vibration investigations, are summarized. The third section is devoted to land-based scientific operations such as glaciological field work, botanical studies around Bellingshausen Station, and airfield construction at Molodezhnaya.

Komova, V.V.  
Ice conditions, Sea ice distribution, Antarctica.  
A detailed description of ice conditions along approaches to Mirnyy, Molodezhnaya, and Leningradskaya Stations and to the construction site of the new Soviet station in March and April 1973, as well as of drift conditions encountered by the Ob' is given. It is based on data from aerial reconnaissance, satellites and visual observations.
- 33-894**  
Ice conditions encountered by the research vessel Professor Zubov (Dec. 1972-Mar. 1973). (Ledovye uslovia plavaniia nauchno-issledovatel'skogo sudna Professor Zubov (dekabr' 1972 g.—mart 1973 g.)).  
Denisov, A.S., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.79-86, In Russian. 12 refs.  
Ice conditions, Pack ice, Sea ice distribution, Icebergs, Antarctica.  
Ice conditions encountered by the Professor Zubov are described for the following routes: Montevideo-Bellingshausen-Molodezhnaya-Freemantle; Freemantle-Mirnyy-Kerguelen; Freemantle-Mirnyy-Amery camp; Amery camp-Molodezh-

naya-Africa. Several conclusions on iceberg and pack distribution are drawn from the data.

33-895

Features of the formation of the Balleny ice massif and drift of the Ob'. (Nekotorye zakonomernosti formirovaniia Ballenskogo ledianogo massiva i drev' d/e Ob').

Romanov, A.A., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.87-95, In Russian. 6 refs.

Sea ice, Pack ice, Drift.

The Ob' was icebound from Apr. 23 until July 22, 1972, near the Balleny Islands and forced to drift in the area of the so-called Balleny Ice Massif. She drifted altogether 564 miles at a rate of 0.26 knots. Added to other available data, the observations resulting from this situation allowed several conclusions to be drawn about ice formation in the region. The best time to approach Leningradskaya Station is late January or February. The route should be chosen based on the current position of the Balleny Massif.

33-896

Results of navigability trials of antarctic ice by the Ob'. (Nekotorye rezul'taty ispytaniil khodkosti d/e Ob' v antarkticheskikh l'dakh), Kudishkin, V.S., et al, *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.96-99, In Russian. Leont'ev, E.B.

Ships, Ice cover strength, Ice cover thickness, Pack ice, Sea ice, Ice navigation, Antarctica.

Instrument readings on various characteristics of ice and on speed of the Ob' in antarctic waters are used to assess the effectiveness of vessels of her type for resupply missions and other work in summer pack and drifting ice.

33-897

Features of the oceanographic regime in Prydz Bay (Feb. 1973). (Osobennosti gidrologicheskogo rezhima v zalive Priuda (fevral' 1973 g.)).

Denisov, A.S., et al, *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.100-105, In Russian. 6 refs.

Myznikova, M.N.

Ice conditions, Sea ice distribution, Antarctica—Prydz Bay.

Ice and oceanological conditions in the Prydz Bay in February 1973 were studied by the Professor Zubov. Sea ice distribution, chemistry, temperature, salinity, and circulation of the water in the bay are analyzed.

33-898

Movement of the ice sheet around Mirny Station. (O dvizhenii lednikovogo pokrova v ralone stantsii Mirny).

Ivanov, I.P., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.113-114, In Russian. 3 refs.

Glacier movement, Glacier flow, Ice deformation, Lasers, Antarctica—Mirny Station.

The Doppler-effect method using lasers was employed to study flow and deformation of the ice cover around Mirny Station. At more than 20 points, average hourly, average per-minute and momentary flow rates were recorded and the nature of glacier movement in the Vetrov Hill area was analyzed. Average hourly rates range from 0.0 to 1.2 microns/sec.

33-899

Antarctic ice sheet deformation. (K voprosu o deformatsii antarkticheskogo lednikovogo pokrova), Ivanov, I.P., et al, *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.115-116, In Russian.

Firsov, N.T., Chudakov, V.I.

Ice deformation, Glacier ice, Glacier movement, Antarctica—Wilkes Land.

Ice sheet deformation was studied in locations along a Mirny-Vostok traverse. In areas with many crevasses glacier deformation resembles the vibration of springs with amplitudes of 3-10 microns on a 10 m base. Maximum deformation in crevasse free areas does not exceed 0.4 microns.

33-900

Studies of antarctic glacier structure. (Rezultaty issledovaniia stroeniia antarkticheskogo lednika).

Trepov, G.V., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.117-121, In Russian.

Glacier beds, Glaciers, Radio echo soundings, Antarctica—Hays Glacier, Antarctica—Molodezhnaya Station.

Radio echo sounding of the antarctic ice sheet in the Hays Glacier region permitted study of the internal structure of the glacier and the diagramming of the glacier bed.

33-901

Geomagnetic measurement within a glaciological polygon. (Geomagnitnye izmereniia na gliatsiologicheskoi poligone).

Burisev, I.U.A., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.122-124, In Russian.

Glacier movement, Geomagnetism, Antarctica—Wilkes Land.

The 18th Soviet Antarctic Expedition marked the beginning of a magnetic study of glacier flow velocity and direction. A geo-

magnetic polygon was laid out 353 km from Mirny on the route to Vostok and was defined by the right-angle intersection of two traverse routes. The chosen area is suitable for study but in order to improve the accuracy of this method, the cross-shaped polygon should be replaced by a right-angle network of traverse routes.

33-902

Radio echo soundings within glaciological polygons. (Rezultaty radiolokatsionnoi s'emki na gliatsiologicheskikh poligonakh).

Chudakov, V.I., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.125-129, In Russian.

Radio echo soundings, Glacier thickness, Glacier beds, Antarctica.

In 1973 a glaciological field party measured glacier thickness along the Mirny-Vostok traverse and completed barometric leveling of its surface as far as the 357th km. A second area survey was done in polygon No.2, where the glacier thickness ranges from 1810 to 2350m, whereas in No.3 it goes from 1630 to 2670m. Surface height is 1810m in No.2 and 2860m in No.3.

33-903

Resonant hull vibrations of the Ob' when traversing ice cake. (Rezonansnye kolebaniia korpusa d/e Ob' pri dvizhenii v melkobitykh l'dakh).

Kudishkin, V.S., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.68, p.130-132, In Russian. 2 refs.

Ships, Sea ice, Ice navigation, Vibration.

Hull vibrations of the Ob' are studied during its passage through antarctic ice cake at various speeds. Experimental data are presented on frequency and amplitude of hull vibrations in the resonance range. Desirable (supercritical) speeds are recommended.

33-904

Interaction of the hull of the Ob' with compressed ice. (Osobennosti vzaimodelstviia korpusa d/e Ob' so l'dom pri szhatiakh).

Since 1972 the U.S. Fleet Weather Facility Ice Operations Department has produced global sea ice analyses and forecasts on

a year-round basis. The data summarized in these analyses provide useful information for planning Antarctic operations. The products and some applications are: 1. detailed "tailored" analyses and forecasts for close support of ships in the polar pack; 2. routine weekly analyses which indicate the existing trends in ice growth or recession. These also serve as bases for long-range forecasts and climatological summaries; 3. 15- and 30-day forecasts, used to update seasonal forecasts; and 4. seasonal outlook in the Ross Sea, indicating the expected rates and patterns of breakup and the expected dates for safe transit to McMurdo or the Ross Ice Shelf. (Auth.)

Eighteenth Soviet Antarctic Expedition. Winter research 1972-1974. (Vosemnadtsataia sovsetskaiia antarkticheskaia ekspeditsiia. Zimovochnye issledovaniia 1972-1974 gg.), Sovetskaiia antarkticheskaia ekspeditsiia, Sovetskaiia antarkticheskaia ekspeditsiia. Trudy, 1978, Vol.67, p.7-34, In Russian.
- 33-938  
Research projects, Antarctica. This overall description of the winter portion of the 18th SAE is divided into three sections. The first, general questions of expedition activity, deals with logistics and international contacts. The second, concerning engineering and construction work, covers problems of power supply, surface transport, radio communication, air operations and construction and repair activities. The third summarizes organization and methods of research in atmospheric studies, geophysical and medical research, as well as the exchange programs with the United States.

Dynamics of the Balleny ice ridge. (Dinamika l'dov Ballenskogo ledovogo massiva), Eskin, L.I., Sovetskaiia antarkticheskaia ekspeditsiia. Trudy, 1978, Vol.67, p.35-40, In Russian. 5 refs.
- 33-940  
Pressure ridges, Sea ice distribution, Ice conditions, Antarctica—Balleny Islands. Features of sea ice drift resulting from constant currents and wind are determined using ice observations from ships, satellite information, and data from ships icebound in the Somov Sea. The stability of the western boundary of the ridge and the wide fluctuations in the location of ice edges on the north and east sides are discussed. In addition to the previously known cyclonic circulation of ice in the northeast part of the ridge, there was also noted an anticyclonic circulation in the southeast, which is bounded by the Ninnis Glacier on the west.

Sea ice distribution, Ice breakup, Pack ice, Icebergs, Antarctica—Leningradskaya Station. A description of ice conditions around Leningradskaya in 1973 using coastal observations of the pack (ice thickness, snow density and depth) is given. Pack here may not break up for several years running, partly because of large numbers of locally formed grounded icebergs. A year-round polynya lies beyond the pack to the north and northeast of the station.

Snow accumulation around Molodezhnaya Station. (Snegonakoplenie v raione stantsii Molodezhnoi), Sen'ko, P.K., Sovetskaiia antarkticheskaia ekspeditsiia. Trudy, 1978, Vol.67, p.55-57, In Russian.
- 33-942  
Snowfall, Snow cover distribution, Antarctica—Molodezhnaya Station. Snow accumulation observations were carried out along three profiles (azimuth around 140 deg) on the continental ice 8-12 km from Molodezhnaya from May 1973 until Feb. 1974. Snow depth increase occurred primarily in June and July. In November, December and January there was a decrease. Snow depth reached 50 cm in low areas of the southeastern portion of the profiles.

- 33-943  
Snowquakes, Glacier ice, Icequakes, Seismology, Seasonal variations, Antarctica—Mirny Station. During the 18th SAE several hydrometeorological conditions were analyzed to determine their effect on snowquakes recorded at the seismic station at Mirny. Such quakes occur because of dynamic glacier processes. At Mirny, as opposed to Novolazarevskaya, seismic glacier activity is related to season. This relation is caused by hydrometeorological conditions, to some extent by the presence of fresh water near the ice barrier, wind and sea swell. There is no indication that local wind speed affects glacier dynamics.

Preliminary design of an experimental containerized freeze desalination unit. Fraser, J., et al., *U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Contractor report*, Dec. 1977, CR 78.005, 76p. Thompson, S. Desalting, Equipment, Artificial freezing, Cost analysis.

A preliminary design of a 20,000 gpd containerized indirect contact freeze desalinator was completed. The system consists of a freezer with a defrosting cycle; wash column; indirect contact melter; and pumps, compressors, heat exchangers and controls necessary to make a complete system. At a nominal design point of 3.5% feed and at 70F, power consumption is estimated to be 77 kWh/kgal. The construction cost of a prototype unit is estimated to be \$280,000. The system is designed to operate on virtually any type of feed water. Projected performance data is given for the system operating with feed salinities from 0.5% to 3% and feed temperatures from 40F to 100F. In addition to a system with a defrosted freezer, studies were conducted of a scraped tube freezer, which indicated that both the capital and operating cost of that type of freezer would be much more expensive.

Ice excavation machine. Vaudrey, K.D., *U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Civil Engineering Laboratory. Technical report*, Feb. 1977, CEL-TR-851, 28p. ADA-037 951. Excavating equipment, Ice, Trenching, Cold weather operation, Cold weather construction, Anchors, Ice removal equipment, Snow trenches.

A 30-hp ladder-type ice trencher was selected and procured for its low ground pressure and versatility. The chain was outfitted with specifically designed conical ice teeth, and a rotating ice chipper drum was designed and fabricated for the backhoe arm. Both modifications, along with an off-the-shelf hydraulic impactor attachment, were evaluated during a field test program after undergoing shakedown performance tests in the laboratory. A similar, but larger machine with identical teeth, procured under a separate task, was observed during an extended antarctic ice-trenching operation. The CEL-designed conical teeth made both ice excavation machines very efficient trenchers, cutting over 3,000 lineal feet (900 m) of ice with an average specific energy of only 220 in.-lb/in.<sup>3</sup> (1,500 KPA). Both backhoe attachments were effective for special applications, such as ice hummock removal and deadman anchor emplacement. (Auth.)

Ice sheets, Seismic prospecting, Antarctica—Marie Byrd Land.  
The purpose of this study was to investigate some of the effects of anisotropy and inhomogeneity on the propagation seismic waves by theoretical analysis and comparison with seismograms from the antarctic ice sheet. Four specific topics are considered: (1) reflection coefficients at an isotropic-anisotropic boundary, (2) surface wave propagation in the presence of a strong velocity gradient, (3) conversion between body wave types upon total internal reflection, that is at the turning point of a refracted arrival, and (4) the continuous bodily conversion of P waves into shear waves in the course of propagation through a strong velocity gradient.

Why bother with Antarctica. Browning, J.A., *Thayer School of Engineering. The Year*, Oct. 1978, 6(1), p.27-29.  
Ice shelves, Drilling, Drills.  
The author discusses his activities in the Antarctic with an engineering firm assigned to drill an access hole of 1-ft min diam at Site J9 on the Ross Ice Shelf. Drilling was accomplished with a flame drill, with two diesel-powered compressors, thousands of feet of multiple hose lengths, hydraulic systems and various pumps. The flame drill, normally used for rock drilling, was successfully tested on ice in Alaska. Drilling operations at the J9 site proved to be satisfactory; however, it is recommended that the drill not be used for deep drilling in ice (beyond 3,000 ft). Use of a hot water jet system, to be tested in the coming season, is suggested.

Radio communications for travellers on the Arctic Ocean. Church, F.W., *Polar record*, May 1978, 19(119), p.153.  
Radio communication, Cold weather operation, Equipment.  
The following aspects of radio communication are discussed: radio propagation, radio noise levels, radio equipment, general precautions, communications organization, and antarctic communications. Considerations regarding planning and maintaining radio communications for surface travelers in both the Arctic and Antarctic are substantially the same. However, the reflecting ionospheric layer, essential for higher-frequency radio communication beyond the horizon, varies in height to a much greater degree over the Antarctic than in the Arctic. Hence radio propagation paths and radio frequencies to be used are more difficult to predict. While the absence of frequency-sounding facilities at an Arctic radio station is unlikely to affect seriously the success of radio communication, at a similar antarctic station the lack of such facilities will undoubtedly increase the difficulty in establishing contact with a distant station or traveling party.

Military engineering, Military equipment, Foundations, Portable equipment, Frozen ground.  
An initial development study was completed for a versatile platform construction system to be used by the Marine Corps in any type of marginal terrain that might be encountered: marshes, drifting sand, frozen soil, etc. These platforms would be used as foundations for artillery emplacements, helicopter or VTOL pads, and various shelters. For construction at remote sites, all components of the system must be lightweight, easily handled by two men, and capable of rapid assembly without bolts or special tools. A system composed of sealed box beams covered by the interconnecting decking panels was selected for
- development. Both the beam and panel components would provide buoyant support on low bearing terrain. The beam substructure could be used to elevate the platforms over un-cleared sites.

Preferred crystal orientations in the fast ice along the margins of the Arctic Ocean. Weeks, W.F., et al, *Journal of geophysical research*, Oct. 20, 1978, 83(C10), MP 653, p.5105-5121, 62 refs.  
Gow, A.J.  
Ice crystal structure, Crystal orientation, Ice crystal growth, Fast ice, Ocean currents, Boundary layer, Sea ice, Ice water interface.  
Field observations of the growth fabrics of the fast and near-fast ice along the coasts of the Beaufort and Chukchi seas show that at depths of more than 60 cm below the upper ice surface the sea ice crystals show striking alignments within the horizontal plane. In general, the c axes of the crystals were aligned roughly parallel to the coast, the outlines of islands, and passes between islands. Our, and similar observations can be explained if it is assumed that the c axes of the crystals are aligned parallel to the "long-term" current direction at the sea ice-seawater interface. It is hypothesized that current flow in this direction reduces the thickness of the solute boundary layer as well as the salinity in the liquid at the interface. This lowered salinity allows crystals in the favored orientation to extend farther into the melt than neighboring crystals with less favored orientations. In addition, the current tends to induce a continuous flux of supercooled seawater against the sides of the crystals that extend ahead of the interface. This favors their lateral growth. The aligned crystal aggregate that forms has the overall characteristics of a single crystal. The development of such crystal alignments results in pronounced anisotropy in the mechanical, thermal, and electrical properties of fast ice. It is suggested that such crystal orientations can be used as an aid in determining current patterns in perennially ice-covered areas such as the Canadian Archipelago.

Kats, N.I.A., *Moskovskoe obshchestvo ispytatelei prirody. Bulletin. Otdel biologicheskii*, May-June 1977, 81(3), p.74-81, In Russian with English summary, 20 refs.  
Arctic vegetation, Plant ecology.

Coefficients of specific community of flowering plants are given for a number of arctic and subarctic islands considered in pairs in different combinations. The coefficients of community were found to be higher the nearer to one another the islands of a given pair are. Generally they are higher in the Arctic than in the Subarctic where the islands are farther from one another and from the continents. A comparison of the number of moss and flowering plant species showed that both in the Arctic and in the Antarctic mosses are more numerous than flowering plants. (Auth.)

This report is intended to define a polar sub-program within the objectives and planning framework of the Global Atmospheric Research Program (GARP). The objectives of the program are to identify and study polar processes relating to the improvement of weather prediction from general circulation models, and to develop a basis for understanding the role of arctic and antarctic ice in climate dynamics. The report provides an overview of the GARP polar sub-program and its scientific background, reviews the Polar Experiment (POLEX) to be carried out simultaneously with the First GARP Global Experiment (FGGE), discusses polar processes in climate modeling, and describes climate-related experiments and monitoring for the program.

**Snowdrifts, Wind tunnels, Wind (meteorology), Antarctica—Showa Station.**  
Wind tunnel tests were conducted in order to predict profiles of snowdrift around buildings at Showa Station. Assuming that snowflakes in wind velocity fields exceeding the mean wind velocity flow along with the wind, and snowflakes in those fields not exceeding it tend to accumulate on the ground surface, the profiles of the snowdrift around the buildings can be predicted. The results of wind tunnel tests are as follows. (1) The profile of the snowdrift changes according to the surface friction velocity of the surface boundary layer and the altitude of the plume. (2) The profile of the snowdrift can be predicted in the division of the wind velocity field at the altitude Z. (3) The variation of the snowdrift profile can also be expressed by the index K of the fluid energy of the mean wind. (Auth. mod.)

Ice melting, Artificial melting, Bubbling, Computerized simulation.  
Results of laboratory experiments conducted to determine bubbler-induced heat transfer coefficients are reported. Implications and validity of results are discussed. As a second step, a procedure for computer-simulating the behavior of an ice sheet whose thickness is controlled by a bubbler system operating intermittently over a long period of time is developed. The simulation uses experimentally determined bubbler heat transfer coefficients, weather data, site characteristics, and desired performance at input data, and a finite difference method to solve the equations governing the ice thickness and temperature profile. Through an example simulation, the usefulness of the procedure in predicting ice thickness and temperature profile histories, and the effectiveness or suitability of a given bubbler system are demonstrated.

Sea ice, Icebreakers, Engines, Propellers, Ice breaking.  
Polar Star's second commanding officer describes the ship's second ice trials and first Antarctic deployment. Clearing the channel in the fast ice to McMurdo proved to be a relatively quick procedure, a little more than one day compared to a week's effort by the Wind class breakers. However, widening the channel, preventing refreezing, and clearing a turning basin played havoc with the propellers. Although engine instruments indicated that they stayed within safe limits, the vibration resulting from almost continuous ingestion of ice by the propellers is described as "awesome". The propeller problems have been identified and repairs are underway.

Maps, Polar regions, History.  
Important periods in the progress of polar research and the development of geographical knowledge of the polar regions are illustrated by characteristic maps. Legends such as a terra australis and an Arctic Ocean open on all sides affected polar cartography for a long time. The geographical theories of Delisle/Buache in the 18th and A. Petermann in the 19th centuries influenced cartographic representation. In the 19th century successful research in polar regions and the use of modern scientific methods were matched by a rapid increase in knowledge and constant improvement of map faces. (Auth.)

Glacier mass balance, Ice sheets, Ice conditions, Mapping, Tectonics, Earth crust.  
The present article reviews characteristic features of the physical nature of Antarctica and outlines relevant scientific results. The discussion is, however, confined to geosciences. The progress of mapping is discussed and the essential results of tectonic and geological research, as well as investigations of the earth's crust, are reported. Much effort is devoted to the ice, which is the most widespread mineral in Antarctica, covering 98% of the continental area. Emphasis is placed on the distribution, the mass balance, the motion of the ice and the stability conditions of the sheet. Finally, a brief review of the antarctic climate is given, summarizing the most typical and harsh features. A general view of the history of exploration and of the political and economic potential of Antarctica is given. (Auth.)

Research projects, History, Expeditions, Polar regions.  
Today arctic and antarctic research is less popular than at the time of the last voyages of discovery. The history of German polar research and the support given to it by the Berlin Geographical Society are described. The attempt is made to order the phases of development of polar research according to its changed aims and methods. An indication of current polar research activities is given by means of a selection of descriptions by various polar research institutions of themselves and their programs. (Auth. mod.)

Model for Holocene retreat of the West Antarctic Ice Sheet.  
Thomas, R.H., et al, *Quaternary research*, 1978, 10(2), p.150-170, 36 refs.  
Bentley, C.R.  
Ice sheets, Ice shelves, Ice models.  
Equations are derived that can be used to make a quantitative estimate of the maximum size of a marine ice sheet and of when and how rapidly retreat would take place under prescribed conditions. Ice sheet growth is favored by falling sea level and uplift of the seabed. In most cases the buttressing effect of a partially grounded ice shelf is a prerequisite for maximum growth out to the edge of the continental shelf. Collapse is triggered most easily by eustatic rise in sea level, but it is possible that the ice sheet may self-destruct by depressing the edge of the continental shelf so that sea depth is increased at the equilibrium grounding line. Application of the equations to a hypothetical "Ross Ice Sheet" that 18,000 yr ago may have covered the present-day Ross Ice Shelf indicates that, if the ice sheet existed, it probably extended to a line of sills parallel to the edge of the Ross Sea continental shelf. By allowing world sea level to rise from its late-Wisconsinan minimum it was possible to calculate retreat rates for individual ice streams that drained the "Ross Ice Sheet". If ice shelves did not form during retreat then the analysis indicates that most of the West Antarctic Ice Sheet would have collapsed by 9000 yr B.P. Thus, the present-day Ross Ice Shelf (and probably the Ronne Ice Shelf) serves to stabilize the West Antarctic Ice Sheet which would collapse very rapidly if the ice shelves were removed. Rebound of the seabed after the ice sheet had retreated to an equilibrium position would allow the ice sheet to advance once more. (Auth. mod.)

Implications of outer space technology on development in meteorology and meteorological services.  
Johnson, A.W., *World Meteorological Organization. WMO bulletin*, July 1975, 24(3), p.162-170.  
Spaceborne photography, Weather observations, Ice conditions, Icebergs, Sea ice, Weather forecasting.  
Developments in the meteorological satellite program since the first TIROS satellite was launched in Apr. 1960, and the inception of geostationary satellites are summarized. Among the applications of weather satellite imagery discussed and illustrated are the following: the characteristics of the Gulf Stream; analysis of the daily ice field in the Arctic and Antarctic; iceberg formation and drift in the Antarctic; tornado and severe storm warning; vertical temperature profiles and moisture soundings; the distribution of snow; measurements of wind from cloud movements; and hurricane formation over tropical areas. The availability of the data and international cooperation in future satellite programs are discussed.

Moraines of probable Miocene age, Dry Valleys, Antarctica. Claridge, G.G.C., et al., *New Zealand antarctic record*, 1978, (12), p.1-5, 3 refs. Campbell, I.B. Moraines, Glacial deposits, Glacial geology, Soil surveys. Recent investigations of old moraine deposits found at the mouths of all valleys between Tyrol and Nibelungen Valleys indicate a pressured ice advance westward up the Wright Valley between the time the valley was first cut during the mid-Miocene times and the Wright Upper IV episode which occurred more than 3.7 m.y.a. Features of the dry valleys displaying evidence of this very early ice advance are cited. The presence of 1300 m of ice moving in a westerly direction in the Wright

Valley implies a great depth of grounded ice in the Ross Sea associated with a low sea level during the late Miocene-early Pliocene times.

**Nature of the soil of Mars: evidence from Antarctica.** Campbell, I.B., et al, *New Zealand antarctic record*, 1978, 1(2), p.6-9, 8 refs.

Claridge, G.G.C.

**Mars (planet), Soil surveys, Clay minerals, Soil moisture.**

Based on observations of the Martian surface and similarities recognized between Martian soils and the older soils of Antarctica, it is concluded that the soils on Mars have been formed through long-continued weathering of basic igneous rocks, and that they consist of a mixture of coarse and fine material to a depth of several meters, of which all except the upper meter is ice-cemented. Weathering has caused exposed surfaces of all rocks to be covered with a film of iron oxides, clay minerals and other weathering products. The clay content of the Martian surface is greater than that of even the most weathered antarctic soils.

## 33-1296

**Aluminum corrosion assessment in Antarctica.** Fahy, F.W., *New Zealand antarctic record*, 1978, 1(2), p.20-25, 5 refs.

**Aluminum, Corrosion.**

In order to develop cost-effective ways of protecting architectural aluminum against pollution-induced corrosion, racks of aluminum coupons have been mounted in sites widely varying in climate, i.e., New Guinea, Scott Base and Arrival Heights. The coupon material mounting system and anodizing process are briefly described, and weight changes of the coupons during atmospheric exposure at the various sites are illustrated.

**Concreting in Antarctica.** Varcoe, G.E., *New Zealand antarctic record*, 1978, 1(2), p.26-30.

**Winter concreting, Concrete construction, Cold weather construction, Permafrost, Cold weather tests.**

Tests of trial mixes of concrete aggregate to be used in construction at Scott Base indicated that difficulty would be experienced in making a workable concrete mix with the "red" or No.1 aggregate, but that satisfactory concrete could be made with the "black" aggregate (No.2). However, both aggregates will require a high cement content. Methods are outlined for supplying cement to Scott Base, supplying and testing aggregate, supplying and heating water, heating and drying aggregate, mixing, insulating aggregate from permafrost, and keeping placed concrete from freezing.

## 33-1298

**Sea ice organisms and their importance to the antarctic ecosystem (Review).** Bradford, J.M., *New Zealand antarctic record*, 1978, 1(2), p.43-50, 29 refs.

**Cryobiology, Microbiology.**

An attempt is made to bring together existing knowledge on ice communities and show how the microscopic plant community develops in the ice, the kinds of organisms (animal and plant) which contribute to the community, and their importance to the antarctic ecosystem. Living microalgae are incorporated continuously into the underside of the annual sea ice during its progressive formation. Different species of diatoms dominate the autumn and spring communities; *Nitzschia*, *Fragilariopsis* and flagellates are found in the autumn and into winter, whereas *Peridinium* appears in Aug. and *Amphiprora*, *Stephanopyxis*, *Nitzschia* and *Navicula* begin to increase between Oct. and Nov. According to Andriashvili (1968) there is a strict ice fauna which lives at least temporarily in the ice and a sub-ice fauna whose members never enter directly into the loose ice, but are to some degree in trophic connection with the ice community. The ice fauna may consist of polychaete worms, copepods, amphipods, fingerlings of the fish *Trematomus borchgrevinkii*, ciliates, and juveniles of the foram *Globobulimina*. The sub-ice fauna consists of adult *Trematomus borchgrevinkii*, the krill *Euphausia crystallorophias*, and at some times of the year *E. superba*.

**Eleven year chronicle of one of the world's most gigantic icebergs.** McClain, E.P., *Mariners weather log*, Sep. 1978, 22(5), p.328-333, 18 refs.

**Icebergs, Sea ice distribution, Ice conditions, Drift, Photointerpretation, Spacecraft.**

Data on satellite-determined positions of the Trollunga giant iceberg during 1967 through 1978 are reported. The iceberg was formed in 1967 from the Trollunga ice tongue at 69.5S and 1W, and was named after its origin. Chronology and dimensions of the gigantic iceberg are tabulated. The amount of melting, average speed of the iceberg along the ocean currents and sea water temperature are discussed in the context of utilizing icebergs as a source of fresh water.

## 33-1304

**Evaluation of levels of Pb, V, Cd, Zn and Cu in the snow of Mt. Blanc during the last 25 years.**

Briat, M., International Colloquium on Polluted Atmospheres, 13th, Paris, France, April 25-28, 1978. Proceedings. Edited by M.M. Benarie, Studies in environmental science, Vol.1, Amsterdam, The Netherlands, Elsevier Scientific Publishing Co., 1978, p.225-228, 10 refs.

**Snow composition, Chemical analysis, Pollution.**

For evaluating the influence of pollution on the atmosphere in temperate regions, samples from a snow core covering the period 1948-1974 and situated at the 4250 m level of the Mt. Blanc massif were analyzed for chemical composition. All the elements analyzed, except Cl, which is produced primarily by marine sources, are mostly of continental origin and can be explained as such. However, levels of Pb, V and Cd have increased up to a net factor of 2 since 1950, which parallels increased production of gasoline additives (Pb), increased use of heavy oils (V) and increased consumption of gasoline (Cd). Concentration of chemical elements in the snow of Mt. Blanc is compared to that of Antarctica, Greenland and Gt. Britain.

Effects of wastewater and sewage sludge on the growth and chemical composition of turfgrasses. Palazzo, A.J., *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1978, SR 78-20, 11p., ADA-061 878, 17 refs.  
Waste disposal, Sewage disposal, Grasses, Growth, Chemical composition.  
A greenhouse study was conducted to determine the effects of wastewater and sewage applications on the growth and chemical composition of two turfgrass mixtures. A mixture of tall fescue and annual ryegrass was compared to a mixture of Kentucky bluegrass, red fescue and annual ryegrass. The mixtures were grown in pots of Charlton silt loam in a greenhouse. Prior to seeding, soil in some pots was amended with sludge at rates of 45 or 90 g/pot. Commercial fertilizer supplying N, P, and K was incorporated with soil in pots designated as controls. Treated municipal wastewater was applied on unamended and sludge-amended soil at rates of 5 or 10 cm per week. Wastewater and sludge treatment increased yields, and total uptake of N, P, K, Zn, Cd, P, Cu, and Ni by the turfgrasses differed by treatment. The two grass mixtures were similar with regard to yields and composition. Larger yields corresponded to greater plant uptake of N, P, K, and metals.

Decay patterns of land-fast sea ice in Canada and Alaska.  
Bilello, M.A., MP 1161, Symposium on Sea Ice Processes and Models, Sep. 6-9, 1977. Proceedings, Vol.2, Seattle, University of Washington, 1977, p.1-10, 11 refs.
- Sea ice, Fast ice, Ice cover thickness, Ice deterioration, Meteorological factors.
- Weekly measurements of the thickness of land-fast sea ice made over a period of 10 to 15 years at a number of coastal locations in Canada and Alaska were analyzed. That portion of the data relating to maximum ice thickness and decay (i.e., the decrease in ice thickness) are presented and examined. Many meteorological and marine factors affect the decay process. This study investigates the effects of two important weather elements: air temperature and solar radiation. Complete and reliable air temperature data for each station made it possible to analyze the relationship between accumulated thawing degree-days (ATDD) and sea ice ablation. The relationship between ice decrease and daily accumulated solar radiation was investigated; the results were comparable to those derived when ATDD was used as the dependent variable. Other factors affecting ice ablation and breakup, such as snow-ice formation, snow cover depth, and wind, are also discussed in the study.

- Sea ice, Drift, Ice temperature, Thermal expansion.
- Shorefast and nearshore pack ice motions in the vicinity of Prudhoe Bay, Alaska, have been monitored for the spring seasons (March-June) of 1976 and 1977. From the base camp on Narwhal Island, a barrier island 25 km northeast of Prudhoe Bay, a ranging laser was used to measure distances to targets located on the fast ice within a 7 km radius of the island. To assess pack ice motions, a radar transponder system with tracking stations located on Narwhal and Cross Islands was used to monitor the positions of transponders placed on the pack ice as far as 37 km northeast of the islands. These results suggest that gyre movement or slippage of the nearshore pack ice in this area apparently does not begin until early to mid-summer. The

pack ice in this area responds slowly, and only weakly to local winds. The mesoscale displacements that occurred took place only after several days of consistent offshore winds. This indicates that a significant shoreward stress originating in the more distant pack heavily influences the dynamics of this nearshore area.

**Characterization of the surface roughness and floe geometry of the sea ice over the continental shelves of the Beaufort and Chukchi Seas.**

Weeks, W.F., et al, MP 1163, Symposium on Sea Ice Processes and Models, Sep. 6-9, 1977. Proceedings, Vol.2, Seattle, University of Washington, 1977, p.32-41, 9 refs.

**Tucker, W.B., Frank, M., Fungcharoen, S. Sea ice distribution, Surface roughness, Side looking radar, Pressure ridges.**

This paper reports on observations primarily made during the late winter and early spring of 1976 when the ice cover was at its maximum extent, and very few leads were observed. The primary sensors used were a laser profilometer and an X-band side-looking airborne radar (SLAR) system. The heaviest ridging was found at Barter Island and there was a general decrease in the number of ridges as one moved west into the Chukchi Sea. There was no strong variation in the mean ridge height along the coast. There was no systematic areal variation in mean ridge height normal to the coast. There was also no correlation between mean ridge height and the number of ridges per km as has been reported by previous investigators. An analysis was also made of the probability of encountering very large ridges. SLAR imagery gives the size distribution of multi-year ice floes within the nearshore ice pack, and the variation in the areal percentage of deformed ice as a function of distance from the coast. This latter parameter showed a steady decrease as the distance north of the coast increases.

Hibler, W.D., III, MP 1164, Symposium on Sea Ice Processes and Models, Sep. 6-9, 1977. Proceedings, Vol.2, Seattle, University of Washington, 1977, p.46-55, 21 refs.

**Pack ice, Viscous flow, Plastic flow, Ice deformation, Ice models, Mathematical models.**

A dynamic-thermodynamic model of pack ice is presented, which treats the ice as a nonlinear viscous continuum characterized by both bulk and shear viscosities and a pressure term with the viscosities being functions of the deformation rate and the pressure. The pressure is parameterized as a function of the compactness and mean thickness of the ice. This formulation allows the viscous continuum approach to be retained while allowing the system to deform in a plastic manner. The model is formulated in a fixed Eulerian grid, and the dynamical equations are coupled to continuity equations for compactness and mean ice thickness which include thermodynamic source and sink terms. In the numerical scheme the dynamical equations of motion, in finite difference form, are integrated implicitly and the ice thickness equations are integrated explicitly. The model is applied to the Arctic Basin and integrated at one-day steps for up to eight years in order to obtain steady state results for both ice thickness and drift. Two cases are examined.

**Sea ice, Drift, Mathematical models.**

The complete boundary value problem of a linear viscous sea ice drift model is presented, using the finite element method; and the formulation includes the inertial force term in the governing equation of motion. The results of the computations of the steady-state ice velocities in the Arctic Ocean are presented, using mean seasonal geostrophic wind data and available current information. The effect of varying boundary conditions and the viscosity parameters is examined. On a much smaller scale, this model has been applied to the study of non-steady drift of pack ice through the Strait of Belle Isle (between Newfoundland and Labrador) where strong tidal streams and ocean currents move the pack ice back and forth. Using idealized

sinusoidal variations of the tidal streams, it is found that the time lag between the water and the ice velocities is related to the viscosity parameters, which indicates that the ice is not drifting freely; and the boundaries affect the time constant of the simplified first order model of the ice drift through the Strait.

**Sea ice, Seasonal variations, Mathematical models, Meteorological factors.**

Thermal factors should be considered in calculations of the antarctic ice edge position to get a good agreement between calculated results and observed positions. Effects of the dynamics of antarctic sea ice are also significant. The mechanism involves concentration changes which, in turn, affect heat fluxes directed towards lateral and bottom ice floe surfaces. The rate of ice melting and freezing in winter is determined by heat balance equations, which also influence the variability of ice concentration. The latter effect on the ice drift speed was not considered. The initial data for the calculations include seasonal climatic data on total radiation, atmospheric pressure, air temperature, and water temperature taken from the Soviet Atlas of the Antarctic. The calculation grid has 1 deg latitudinal step and 5 deg longitudinal step. The results show that consideration of dynamical factors changes the calculated ice edge positions. The largest error of calculations is for the ice edge position in the Weddell Sea. This might be attributed to the insufficient information on heat fluxes coming from the quasi-homogeneous oceanic layer. (Auth.)

**Sea ice distribution, Ice mechanics, Mathematical models, Ice heat flux.**

A summary is presented of a large-scale numerical model, which has been developed to simulate the annual cycle of sea-ice advance and retreat in both the Arctic and Southern Oceans. The model employs an 8-hour timestep and a rectangular grid with horizontal resolution approximately 190 km. Thermodynamic and dynamic adjustments are calculated sequentially, the thermodynamics being based on energy balances at the top and bottom surfaces of the ice and snow, and the dynamics being based on the following five forces: wind stress, water stress, Coriolis force, the pressure gradient due to the tilting of the sea

surface, and internal ice resistance. Although each grid square is allowed only one ice thickness, each square also has a variable percentage of its area assumed ice-free, thus allowing more realistic ocean-atmosphere exchanges. (Auth.)

**Sea ice, Heat transfer, Ice heat flux, Polynyas, Heat balance, Antarctica—Mawson Station.**

The present program of year round energy flux and oceanic measurements over sea ice and open water near Mawson, Antarctica, is described. The importance of various terms in the energy balance at different times of year, and the application of these results to the parameterization of surface energy exchanges in the sea ice region is under investigation. Particular emphasis is placed on the study of processes over open water and forming sea ice and on the role of oceanic heat flux in the over-all energy balance. Continuation and expansion of the present studies is planned until and during the FGGE. Preliminary results of the studies are presented. Fluxes of radiation and sensible heat over open water are calculated from measurements made during a twenty-day period in February 1977 and are compared with fluxes measured during February 1970. The measurements cover a period when the net energy budget is changing rapidly from one of heat gain by the water to one of heat loss, and during which heat exchange by turbulence is becoming increasingly important as a method of heat loss by the water prior to ice formation. Ecological investigations of yeasts in antarctic soils. Atlas, R.M., et al, *American Geophysical Union. Antarctic research series*, Nov. 13, 1978, 30(2), Terrestrial biology III. Paper 2, p.27-34, 32 refs.  
Di Menna, M.E., Cameron, R.E.  
DLC QK615.5.A85  
Soil analysis, Soil microbiology, Low temperature research.  
Yeasts were identified from antarctic soil samples. *Cryptococcus* and *Aureobasidium* were widely distributed and were found in the dry valleys. Fewer yeast species were identified from antarctic soils than have been reported previously from aquatic antarctic samples. In some antarctic soils yeasts were the dominant microbial populations. Yeasts from antarctic soils have adaptive features that would allow them to grow and survive under harsh antarctic conditions, but we did not identify 'unique' species of yeasts that do not occur in other regions. (Auth.)

Water supply and weather modifications through the use of transported icebergs from the Antarctic.  
Al Faisal, M., *Desalination*, Mar. 1977, 20(1/2/3), p.415-423, 8 refs.  
Water supply, Economic development, Icebergs, Weather modification, Iceberg towing.  
Saudi Arabia is engaged in a wide-scale program of seawater desalination. It is also presently considering the use of Antarctic icebergs as a source of freshwater and as a weather modifier. Suitable icebergs can be found in a zone northeast of the Weddell Sea. Means for locating and inspecting them are described. Furthermore, methods for towing such icebergs from the Antarctic to the Aden Gulf and from the Aden Gulf to any Saudi Arabian Coast are discussed. The necessary steps for protection against melting in transit are also explained. An outline of the various proposed techniques to obtain fresh water from icebergs is given. The considerable cold mass of icebergs is a powerful tool for microclimate improvement, especially on hot coastal plains with a high degree of atmospheric humidity. The lowering of the temperature through fog formation could indeed reduce the costly summer peak demands for water and electricity. Economic projections show that the operating costs of water from icebergs delivered to Saudi Arabia compares favorably with water produced by desalination. Investments forecasts favor also the iceberg source. (Auth.)

Icebergs, Ice melting, Meltwater, Sea water, Salinity.  
Relative to the feasibility of towing icebergs and melting them to provide fresh water, it has been conjectured that melt water from a penned iceberg will rise, without much mixing, to the surface, where it can be siphoned off for subsequent use. Ne-shyba (1977:31-4205 or F-18611) claims that the melt water will have mixed significantly with its salty environment before reaching the surface. It is suggested that both claims may be in error. In the present experiments it is shown that the melt water mixes with a large volume of salty water and spreads out close to the level at which it is produced, and little, if any, rises to the surface. The vital importance of the salinity gradient is stressed.

Effect of inundation on vegetation at selected New England flood control reservoirs. McKim, H.L., et al, MP 1169, Symposium on Remote Sensing for Vegetation Damage Assessment, February 1978. Proceedings, 1978, 13p., 13 refs. Gatto, L.W., Merry, C.J., Cooper, S. Remote sensing, Infrared photography, Vegetation patterns, Damage, Flooding. The effect of inundation on vegetation caused by the regulation and impoundment of water at six New England flood control reservoirs during a June-July 1973 flood was assessed from color infrared photography and corroborative ground surveys. Percent of damaged trees was assessed on a pattern recognition and coloration basis. Correlative ground truth data showed that the deciduous trees, particularly silver maple and red oak, were least affected and that coniferous trees, especially white pine, were most affected by salination and inundation. Much of the understory vegetation, i.e., American and Eastern hop hornbeam, lost all leaves after inundation, but new buds and shoots appeared by late September 1973. A critical relationship, determined from ground transect profiles showing the relationship between species susceptibility and inundation time, was that trees completely covered by flood waters for more than 90 hours showed the most apparent damage.

**Preferred crystal orientations in the fast ice along the margins of the Arctic Ocean.**Weeks, W.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1978, CR 78-13, 24p., ADA-059 024, 77 refs.

Gow, A.J.

**Sea ice, Fast ice, Ice crystal structure, Crystal orientation, Ocean currents.**

Field observations of the growth fabrics of the fast and near-fast ice along the coasts of the Beaufort and Chukchi Seas show that, at depths of more than 60 cm below the upper ice surface, the sea ice crystals show striking alignments within the horizontal plane. In general, the c-axes of the crystals were aligned roughly E-W parallel to the coast. In the vicinity of islands the alignment roughly paralleled the outlines of the islands, and in narrow passes between islands the alignment paralleled the channel. Our observations, as well as similar observations made in the Kara Sea by Cherepanov, can be explained if it is assumed that the c-axes of the crystals are aligned parallel to the "long-term" current direction at the sea ice/sea water interface. The alignments are believed to be the result of geometric selection among the growing crystals, with the most favored orientation being that in which the current flows normal to the plates of ice that make up the dendritic ice/water interface characteristic of sea ice.

33-1521

**On the determination of horizontal forces a floating ice plate exerts on a structure.**Kerr, A.D., *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1978, CR 78-15, 9p., ADA-060 444, 26 refs. For this report from a different source see 32-4451.**Floating ice, Ice pressure, Loads (forces), Offshore structures, Ice strength.**

This report first discusses the general approach for calculating horizontal forces an ice cover exerts on a structure. Ice force determination consists of two parts: (1) the analysis of the in-plane forces, assuming that the ice cover remains intact, and (2) the use of a failure criterion, since an ice force cannot be larger than the force capable of breaking up the ice cover. For an estimate of the largest ice force, an elastic plate analysis and a failure criterion are often sufficient. A review of the literature revealed that, in the majority of the analyses, it is assumed that the failure load is directly related to a "crushing strength" of the ice cover. However, observations in the field and tests in the laboratory show that in some instances the ice cover fails by buckling. This report reviews the ice force analyses based on the buckling failure mechanism and points out their shortcomings. The report then presents a new method of analysis which is based on the buckling mechanism.

33-1522

**Shoreline changes along the outer shore of Cape Cod from Long Point to Monomoy Point.**Gatto, L.W., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1978, CR 78-17, 49p., ADA-060 297, 52 refs.**Shoreline modification, Aerial photography, Photointerpretation.**

This investigation utilized historical and recent aerial photographs and satellite imagery in 1) estimating changes in positions of the high-water line and sea cliff break and base, in rates of accretion and/or erosion, and in volumes of transported sediment, and 2) providing a preliminary evaluation of the direction of littoral transport along the outer Cape Cod coast. This investigation has illustrated a photo interpretation technique that is useful in performing a reconnaissance of coastal change. The data obtained from this method can be used to supplement those acquired by ground surveys and are valid as first approximations for planning subsequent, more detailed surveys.

33-1523

**Estuarine processes and intertidal habitats in Grays Harbor, Washington: a demonstration of remote sensing techniques.**Gatto, L.W., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1978, CR 78-18, 79p., ADA-061 823, 49 refs.**Estuaries, Shoreline modification, Remote sensing, Aerial photography, Spaceborne photography, Tidal currents, Sedimentation, Mapping.**

The primary objective of this project was to demonstrate the utility of remote sensing techniques as an operational tool in the acquisition of data required by the U.S. Army Corps of Engineers, Seattle District, in the Grays Harbor dredging effects project, and related projects. Aerial imagery was used to map surface circulation and suspended sediment patterns near the hopper dredge pump site at the harbor entrance and near pulp-mill outfalls in Aberdeen, and to map the areal distribution and extent of intertidal habitats. The surface circulation maps, prepared from the aerial photographs and thermal imagery, compared favorably with the large-scale circulation patterns observed in the Grays Harbor hydraulic model at the U.S. Army Engineer Waterways Experiment Station. Of the imagery provided by NASA, the thermal imagery was more useful than the color or color infrared (CIR) photographs for mapping circulation, while the CIR photographs were more useful than the thermal imagery or the color photographs for mapping intertidal habitats. Current velocities estimated from dye dispersion patterns and drifting dye drogues were comparable at some locations to velocities measured by *in situ* current meters and in the hydraulic model. Based on a cursory evaluation of LANDSAT-1 imagery acquired in January, February, and October

1973, it had limited utility in providing data on surface circulation patterns in Grays Harbor.

33-1524

**Primary productivity in sea ice of the Weddell region.** Ackley, S.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1978, CR 78-19, 17p., ADA-059 344, 24 refs.

Taguchi, S., Buck, K.R.

**Sea ice, Ice cores, Biomass, Weddell Sea.**

Physical and biological measurements were made of sea ice cores taken from 68S to 78S in the Weddell Sea. Fluorescence measurements indicated an algal community that was strongly associated with salinity maxima within the ice. Maximum concentration of chlorophyll *a* ranged from 0.306 to 4.54 mg/stere. Comparisons with the water column standing crop indicated that the standing crop within the ice represents a minor but significant percentage of the total standing crop for the region. The ice algal community is apparently distinct from others that have been described for land-fast ice in McMurdo Sound, sea ice in the Arctic and pack ice off East Antarctica. The highest concentrations of biological material are found in the bottom or top of the sample in those regions, whereas the Weddell Sea samples are concentrated at intermediate depths (65 m to 215 m) within the ice. A qualitative model indicating the relationship between thermally-induced brine migration and subsequent algae growth is presented. This model indicates the distribution of algae within the ice is dependent on the unique thermal and physical setting for Weddell Sea pack ice where brine drainage processes are initiated by spring and summer warming, but are not carried through as completely as in other regions. (Auth.)

33-1525

**Measurement and identification of aerosols collected near Barrow, Alaska.**Kumai, M., *U.S. Army Cold Regions Research and Engineering Laboratory*, July 1978, CR 78-20, 6p., ADA-058 606, 9 refs.**Aerosols, Particle size distribution, Electron microscopy.**

Measurements of the concentrations of Aitken nuclei in maritime air were made near Barrow, Alaska, in June 1975, with a modified Nolan-Pollack small-particle detector. The concentrations varied from 50 to 300 particles/cu cm, depending upon meteorological conditions. The mean Aitken nuclei count was 100 particles/cu cm for diameters greater than .002 microns. Transmission electron micrographs of aerosols in maritime air near Barrow were taken. The size range was measured to be 0.01 to 2.5 microns in diameter, with the most frequently observed diameter being 0.04 microns. The volume of the maritime air and the collection efficiency of aerosol particles on filmed grids for electron microscopy were measured. The aerosol concentrations were found to be 76 to 101 particles/cu cm; the mean concentration was calculated to be 87 particles/cu cm. The aerosol particles in the maritime air were identified by electron microscopy and selected area electron diffraction analysis. About 20% of the aerosol particles were identified, and 80% of the particles were too small for electron diffraction analysis.

33-1526

**Performance of the St. Marys River ice booms, 1976-77.**Perham, R.E., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, CR 78-24, 13p., ADA-061 431, 5 refs.**Ice booms, Ice pressure, Ice navigation, Cold weather performance.**

The ice booms on the St. Marys River at Sault Ste. Marie, Michigan and Ontario, were operated a second winter, 1976-77, under colder conditions, with less water flow, lower water levels, and 25% fewer ships in the river than during the previous year. The ice cover behind the booms remained frozen to shore for longer periods, and the loads registered in the booms were relatively unaffected by ship passages compared with the previous year's activity. As in the previous year, most structural load changes took place in the west ice boom and were due to movements of the ice cover immediately upstream of the boom. The cover broke free from shore on three occasions: the first and third occasions were minor events, but on the second occasion the cover cracked free, the timbers remained frozen to it, and the boom structure became damaged by the subsequent ice activity. Three anchor line assemblies broke over a period of about 4 hours; the two latter breaks occurred while a ship was operating in the ice. These events point out several factors to be considered in ice booms, such as designing the booms to withstand the action of the solid ice cover as well as the fragmented ice cover, keeping the structures and their assembly simple, and inspecting components and assemblies carefully.

33-1527

**River channel characteristics at selected ice jam sites in Vermont.**Gatto, L.W., *U.S. Army Cold Regions Research and Engineering Laboratory*, Oct. 1978, CR 78-25, 52p., ADA-061 778, 30 refs.

**Ice jams, Channels (waterways), Remote sensing, Photointerpretation, Topographic features, River ice.** The objectives of this investigation were to describe channel characteristics and geographic settings of ice jam sites from aerial photographic interpretation, to indicate which characteristics may be important in causing ice jams, and to suggest additional uses of aerial photographs. Uncontrolled photomosaics of each site were assembled and major river characteristics were delineated on the photomosaics. Characteristics described include: man-made structures, falls, rapids,

changes in channel depths, channel islands, mid-channel shoals or bars, river bed material, river sinuosity, meanders, floodplain width, riparian vegetation, and types of development on the floodplain. River channel widths were measured from the photograph along rivers where ground truth data were available for comparison. Lengths of channel riffles and pools were measured along the rivers where variations in river depths were evident on the photographs. Aerial photographs provide a regional perspective for evaluating channel characteristics at an ice jam site and for analyzing the geographic setting at each site during ice-free conditions. Photographs taken after ice jams have formed are useful in monitoring ice jam formation, in analyzing ice characteristics, and in documenting ice jam breakup and movement.

33-1528

**Fate and effects of crude oil spilled on permafrost terrain. Second annual progress report, June 1976 to July 1977.**McFadden, T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec 1977, SR 77-44, 46p., ADA-061 779, 4 refs. Includes progress report for the first year, CRREL SR 76-15, q.v. 32-1257.**Oil spills, Damage, Chemical reactions, Frozen ground, Environmental impact, Vegetation.**

This spill was compared with one that took place in February 1976 (reported upon in the first annual progress report). Oil moved downslope at a much faster rate during the summer spill than during the winter spill. In the winter the oil cooled and pooled rapidly. The summer spill covered approximately one-third more surface area than did the winter spill in the final configuration, even though the two spills were of almost identical volume. Increases in microbial populations and activities during the months following the spill were evident. Increased counts of bacteria, yeasts, denitrifying bacteria, and petroleum-degrading bacteria following the spills were particularly evident. Analysis of oil decomposition using gas chromatography techniques indicated that the low molecular weight fractions, methane and ethane, were lost almost immediately after the spill in each case. Fractions in the C3 to C9 range were reduced significantly in two months and were nearly zero at the end of five months. An obvious adverse effect on vegetation was noted in both spills. Biological damage from the summer spill appeared to exceed that from the winter spill.

**Recommendations for implementing roof moisture surveys in the U.S. Army.**U.S. Army CRREL/WES/FESA Roof Moisture Research Team, *U.S. Army Cold Regions Research and Engineering Laboratory*, Aug. 1978, SR 78-1, 8p., ADB-031 978L, Distribution limited to U.S. Government agencies only.**Moisture meters, Roofs, Infrared reconnaissance, Site surveys.**

Nuclear, infrared, capacitance, microwave and impulse radar methods for non-destructively detecting moisture in roofs were evaluated. No system was reliable enough by itself or by cross-checking with another system to eliminate the need for a few

core samples of membrane and insulation to verify findings. Airborne infrared surveys are a cost-effective way of reconnoitering numerous roofs at a major installation. However, follow-up on-the-roof surveys are necessary. Of the several grid techniques examined, nuclear surveys were the most reliable. Hand-held infrared surveys are the most accurate on-the-roof method studied. Although an infrared camera costs significantly more than a nuclear meter (\$25K vs \$3K), infrared surveys can be conducted more rapidly. Since the Army has numerous roofs to survey, infrared surveys appear to be the most cost-effective method. For reasons of continuity, accuracy and economy, the Army should establish its own capability to survey roofs for moisture. Implementation should not be at the installation level. A centralized team of roof moisture surveying specialists, skilled in operating infrared equipment but, more importantly, skilled in roofing technology, should be established. The team should both conduct and contract for airborne and on-the-roof infrared surveys. The CRREL/WES/FESA roof moisture research group has initiated development of training aids for use by such a team.

**Construction equipment problems and procedures: Alaska pipeline project.**

Hanamoto, B., *U.S. Army Cold Regions Research and Engineering Laboratory*, June 1978, SR 78-11, 14p., ADB-029 226, 4 refs. Distribution limited to U.S. Government agencies only.

**Cold weather performance, Construction equipment, Pipelines, Engines, Human factors.**

The Trans-Alaska pipeline construction project posed many problems which are not encountered in the more temperate regions. Construction equipment maintenance and operation is of major concern in the far north. Difficulties encountered were due to: extreme low temperature of -70F (-57C) and common winter temperatures of -30F (-34C), the remoteness and isolation of the work area, harsh environment, and the working personnel. This report describes some of the typical problems encountered with construction equipment on this project and some of the remedies and procedures for solving these problems.

**Moisture meters, Water treatment, Waste disposal, Models.**

This report describes the construction, operation and performance of large-scale (90 cm inside diameter and 150-cm-high) lysimeters. These lysimeters can continuously monitor soil moisture flow, soil temperature and redox potential with depth, and sample soil water and soil air with depth. The rate of soil water movement to the groundwater was continuously monitored by a rain gage and a recorder. To simulate field condition, an automatic spray system was developed; this system is also described in this report. The total cost of one lysimeter is approximately \$650 (1975 estimate). The lysimeters are being used to validate a biophysical-chemical model of wastewater renovation by application to land. Detailed blueprints of the lysimeters are kept at CRREL and are available on request.

**Ecological baseline investigations along the Yukon River-Prudhoe Bay haul road, Alaska.**

Brown, J., ed., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, SR 78-13, 131p., ADA-060 255. For this item as a progress report to the U.S. Department of Energy and for individual papers see 32-3888 through 32-3896.

**Research projects, Ecology, Tundra vegetation, Roads, Clay soils.**

Results of the first full year's field research on five projects along the Yukon River-Prudhoe Bay Haul Road are reported. Several projects are extensions of investigations begun in 1976 and are being conducted in cooperation with a Federal Highway Administration sponsored environmental engineering study. The extent and success of weeds and weedy species along the road and in material sites has been followed for summer 1976 and 1977. In order to document the vegetation along the complex elevational and latitudinal gradient and its potential for impact and recovery, 17 vegetation maps have now been completed, and vegetation described and plots established at 120 locations along the 600-kilometer-long road. Collections of vascular plants, bryophytes and lichens were made and catalogued for an additional 9 sites. Sampling for soil invertebrates to determine their sensitivity to impact was undertaken at approximately 25 sites. A detailed study of the impact of road dust upon the vegetation was initiated at one tundra site, and four sites were established to monitor the amount of dust transported onto the tundra across 1000-meter-long transects. The clay mineralogy and chemistry of the dust and road material were investigated.

**Bates, R.E. Microclimatology, Waste disposal, Water treatment, Waste treatment, Meteorological data.**

During 1972, six test cells were constructed at CRREL for the purpose of studying application of wastewater on various soil types and vegetation. In conjunction with this program, a meteorological observing station was established in order to obtain basic information on the climate proximate to the test cells. This report describes the equipment and its installation, and provides a daily tabulation of the following observed parameters: maximum and minimum air temperatures, relative humidity, dew point, wind speed and direction, precipitation amounts, depth of snow on the ground, solar radiation and pan evaporation. The meteorological data collected during the period starting Oct. 1, 1972, to Mar. 31, 1974, were then summarized; and the results are presented in a series of graphs and line diagrams. The meteorological parameters recorded at CRREL were then examined to determine how weather can constrain or help year-round operation of wastewater application to the land. The positive and negative effects of air temperature, precipitation, wind speed, evaporation and snow cover, with respect to land treatment of wastewater, were evaluated. Although no specific recommendations or conclusions are given, the influences of these climatic elements as observed at the CRREL wastewater site are presented for consideration.

### 33-1543

**Geochemistry of subsea permafrost at Prudhoe Bay, Alaska.**

Page, F.W., et al., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, SR 78-14, 70p., ADA-060 434, Refs. p.62-68.

**Iskandar, I.K. Submarine permafrost, Sediments, Sea water, Chemical analysis, Drill core analysis, Salinity.**

The analytical data from sediment, interstitial water, and seawater analyses of samples collected near Prudhoe Bay, Alaska, during the period from March to May 1977, are presented. Analyses include determinations of moisture, calcium carbonate, and organic carbon contents in the sediment samples and pH, electrical conductivity, alkalinity, and concentrations of sodium, potassium, calcium, magnesium, chloride, and sulfate in the interstitial water and seawater samples. Salinity, ionic balance, and freezing point of the water samples were calculated. The marine sediments in Prudhoe Bay generally contain more calcium carbonate, organic carbon, and interstitial water than the underlying glacial and fluvial gravels. On land, a surficial layer of peat also had high organic carbon and moisture contents. The salinity of the seawater samples varied from concentrated brines near the shore where sea ice is frozen directly to, or is located near, the sea bottom to water which was 1.0 to 1.5 ppt less saline than normal seawater at a distance of approximately 10 to 15 km from shore.

### 33-1544

**Waterproofing strain gages for low ambient temperatures.**

Garfield, D.E., et al., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, SR 78-15, 20p., ADA-061 749, 10 refs.

**McLain, B.G. Strain measuring instruments, Low temperature tests, Freeze thaw cycles, Waterproofing.**

Due to recent problems experienced with strain-gage based transducers immersed in water at below-freezing ambient temperatures, a test program was conducted to determine if commercially available strain-gage waterproofing systems could withstand these conditions. A total of 96 combinations of eight waterproofing systems, three beam materials and four strain gage adhesives were evaluated. Test environments included strain cycling at temperatures from +32F to +75F and freeze-thaw cycling from -35 to +90F. Only one waterproofing system withstood all tests with no failures. Other results ranged from one installation failure on three systems to the failure of all 12 installations of one system.

### 33-1545

**Effects of low ground pressure vehicle traffic on tundra at Lonely, Alaska.**

Abele, G., et al., *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, SR 78-16, 63p., ADA-061 777, 18 refs.

**Walker, D.A., Brown, J., Brewer, M.C., Atwood, D.M. Tundra vegetation, Tires, Soil trafficability, Damage.**

Traffic tests were conducted with two low-pressure-tire Rolligon-type vehicles and a small, tracked Nodwell for 1, 5, and 10 vehicle passes on tundra near Lonely, Alaska. The traffic impact was limited to compression of the vegetation and the organic mat and a maximum terrain surface depression of several centimeters, with virtually no shearing or disaggregation of the mat. After one year, the visibility of the traffic signatures had increased, surface depression remained the same, and the thaw depth below the multiple pass tracks had increased a few centimeters.

Investigation of a VLF airborne resistivity survey conducted in northern Maine. Arccone, S.A., *Geophysics*, Dec. 1978, 43(7), MP 1166, p.1399-1417, 26 refs.  
Electrical resistivity, Aerial surveys, Very low frequencies, Topographic effects, Electric fields.  
Airborne wavellit resistivity surveys and profiles at VLF have been analyzed for the effects of topography, altitude, and wave-tilt phase and amplitude. Topographic relief is known to affect at least one electric field component, flight altitude often varies over relief, and phase depends on the earth's resistivity stratification and the relative strength of displacement to conduction current. A mountainous area in northern Maine of predominantly slate, but containing an igneous stock, was surveyed at

150 m mean flight altitude. The 150-m survey was repeated at 300 m and two of the 150-m flight lines were repeated at a total of three other altitudes. A comparison of the 150-m survey with the topography and with the 300-m survey revealed that although most of the resistivity information of the 150-m survey was retained at 300 m, serious differences arose due to topographic influences. Profiles of the individual electric field components at the various altitudes then revealed that topography was distorting resistivity values through its effect upon only the vertical component of the electric field. The separate influences of phase and amplitude were analyzed using the results of a ground survey of the total, complex surface impedance. The phase of the tilt proved to be important in the airborne differentiation of the rock types.

Use of remote sensing to quantify construction material and to define geologic lineaments, Dickey-Lincoln School Lakes Project, Maine.  
McKim, H.L., et al, MP 1167, International Symposium on Remote Sensing of Environment, 12th, Manila. Proceedings, 1978, 9 leaves, 7 refs.  
Merry, C.J., Blackey, E.A.  
Remote sensing, Construction materials, Geologic structures.

Fourteen surficial geology units were delineated in a 2250 sq km area in northern Maine. These units included: alluvial fan, alluvial terrace, esker, floodplain, glacial moraine, kame, kame terrace, outwash, outwash terrace, bedrock, till, till over bedrock, wet outwash and wet till. The surficial geology units were field checked and then updated from the field reconnaissance. The depths of the surficial geology units were estimated utilizing borehole data, field measurements and seismometer data. The areal extent of each surficial geology unit was quantified, using a planimetric color densitometer. The volumes of construction material were computed based upon these areal determinations and estimated depths. The volume estimates, compared with the estimates of required construction material, showed that more material could be found within the prescribed area around the dam and dike sites than was required for construction. It is believed that the east- and northeast-trending lineaments in this area are thrust faults dipping 45 deg to the northeast. The north-trending and N60W lineaments are probably strike-slip normal and reverse faults dipping 80 deg to nearly vertical. Future movement along these faults should be negligible.

Effects of human activities on global climate; a summary, with consideration of the implications of a possibly warmer earth.  
Kellogg, W.W., World Meteorological Organization. Technical note, 1977, No.156, 47p., WMO-No.486, Refs. p.37-47.  
Climate, Human factors, Climatic changes, Ice sheets, Pack ice, Aerosols, Long range forecasting, Sea ice.

Studies of a number of different climate system models with widely varying degrees of complexity have led to the following conclusions. The largest single effect of human activities on climate is due to the increase in atmospheric carbon dioxide concentration resulting from burning fossil fuels. Virtually all of the other major activities of mankind also contribute to warming of the lower atmosphere, i.e., through injection into the atmosphere of airborne particles and of other trace gases (i.e., chlorofluoromethanes, nitrous oxide, etc.), and through the direct addition of heat. A best estimate of the resultant warming of the mean surface temperature of the earth due to human activities is about 1°C by 2000 A.D. and about 3°C by 2050 A.D., with an uncertainty of roughly a factor of two. Warming of the polar regions is expected to be three to five times greater than the global average. The warming would almost certainly have a major influence on the extent of arctic and antarctic sea ice, and would eventually cause a change in the total volume of the major ice sheets of Greenland and the Antarctic, but the corresponding change in sea level cannot yet be predicted. Areas of recommended climate research are outlined.

Measurement of Be-10 in 1,000- and 5,000-year-old antarctic ice. Raisbeck, G.M., et al, *Nature*, Oct. 26, 1978, 275(5682), p.731-733, 13 refs.  
Yiou, F., Francau, M., Lieuvain, M., Loiseaux, J.M.  
Ice cores, Isotope analysis, Spectroscopy, Ice composition.  
This paper reports the use of the nuclear accelerator spectrometry technique for the determination of Be-10 concentrations in ice samples from Dome C believed to be about 1,000 and 5,000 yr old. The sample preparation is described. Measurements were made using the external ion source of the cyclotron. Ice samples were analyzed by comparing their Be-10/Be-9 ratio to those of standardized Be-10/Be-9 samples. Using an estimated annual precipitation rate of 3.7 cm of water at the sample site, the average Be-10 concentration (26,000 atoms per g ice) represents a Be-10 deposition rate of 1/3100 atoms/sq cm/s. This is much less than the value of 1/200 atoms/sq cm/s measured at a Greenland site. It is also 4 to 8 times smaller than the deposition rates found in most sea sediments. Measurements of the complete Be-10 profile over the entire length of the core from which the present samples were taken (estimated to go back to 35,000 B.P.) are planned.

Creep rupture at depth in a cold ice sheet. Colbeck, S.C., et al, *Nature*, Oct. 26, 1978, 275(5682), p.733-737, 13 refs.  
St. Lawrence, W., Gow, A.J.  
Ice sheets, Ice creep, Fracturing, Seismic surveys.  
Experimental evidence has not supported the hypothesis that tectonic processes operating within glaciers and ice sheets are analogous to those in the Earth. However, evidence of the existence of discrete shear planes within the antarctic ice sheet (31-1071 or F-17742) and evidence described here relating to the Greenland ice sheet indicate that faulting takes place at depth in cold ice sheets. The evidence suggests reconsideration of the concept of correspondence between flow and rupture at depth in the Earth and in cold ice sheets, as suggested earlier. Direct investigations at depth in ice sheets are made with relative ease as compared to the nearly impossible task of direct measurements in the Earth's mantle.

Polar sub-programme.

Global Atmospheric Research Programme (GARP). WMO-ICSU Joint Organizing Committee, World Meteorological Organization. GARP publications series, Mar. 1978, No.19, 47p., In English with French, Russian, and Spanish summaries. Numerous refs.

Baker, D.J., Jr., ed. Research projects, Climatology, Sea ice, Models, Measuring instruments.

Processes in the polar regions present special problems to GARP. The Polar Sub-programme is an attempt to address these problems within the terms of reference of the First GARP Global Experiment (FGGE) and the Climate Dynamics Sub-programme. The objectives of the Polar Sub-programme are: 1. To identify and study processes of particular importance in the polar regions relating to the improvement of weather prediction from general circulation models (GARP first objective); 2. To develop a basis for understanding the role of ice in climate dynamics through (a) parameterization of sea ice dynamics and related atmospheric and oceanic processes in climate models, and (c) establishment of an appropriate information base for

studies of the role of sea ice and polar continental ice masses in climatic change (GARP second objective). These objectives will be met through a Polar Experiment (POLEX) designed to augment and contribute to the FGGE, and continuing studies before and after FGGE aimed at the second objective above.

33-1642

Strength of hot concrete adhesion to reinforcement during intensive cooling to low subzero temperatures. [Sipenie stierzhnevov armatury s betonom pri intensivnom ostyvanii gorachego betona do nizkikh otrit-satel'nykh temperatur].

Pantelev, V.M., Cheliabinsk. Politekhnikeskii institut. Sbornik nauchnykh trudov, 1974, Vol.149, p.149-154, In Russian. 3 refs.

Concretes, Reinforced concrete, Concrete freezing, Concrete strength.

33-1643

Cryogenic and post-cryogenic formations in alluvium and their paleogeographic significance. [Kriogennye i postkriogennye obrazovaniia v alluvii i ikh paleogeograficheskoe znachenie].

Danilov, I.D., et al, Akademiia nauk SSSR. Izvestiia. Seria geograficheskai, Mar.-Apr. 1978, No.2, p.84-93, In Russian. 4 refs.

Polyakova, E.I.

Alluvium, Cryogenic processes, Frost penetration, Ground ice, Ice formation, Ice veins.

33-1644

Zonal characteristics of polygonal relief in West Siberia. [Zonal'nye osobennosti polygonal'no-zhil'nogo rel'efa v Zapadnoi Sibiri].

Shamanova, I.I., Akademiia nauk SSSR. Izvestiia. Seria geograficheskai, Mar.-Apr. 1978, No.2, p.115-122, In Russian. 4 refs.

Polygonal topography, Patterned ground, Ice veins, Ice wedges, Ice formation, Ground ice.

33-1645

Main railroad line as a basis for economic development of Siberia and its North. [Zheleznodorozhnaia magistral' kak baza khoziaistvennogo osvoeniia maloobzhitoi territorii (na primere Sibiri i Sibirskogo Severa)].

Sigalov, M.R., Akademiia nauk SSSR. Izvestiia. Seria geograficheskai, July-Aug. 1978, No.4, p.53-63, In Russian. 26 refs.

Economic development, Urban planning, Construction, Baykal Amur railroad, Mining.

33-1646

Mudflows in the Pamir and Pamir-Alai Mountains. [Seli na Pamire i Pamiro-Alai].

Kemmerikh, A.O., Akademiia nauk SSSR. Izvestiia. Seria geograficheskai, July-Aug. 1978, No.4, p.84-89, In Russian. 4 refs.

Slope processes, Mudflows, Glacial hydrology, Slope orientation, Alpine soils, Soil creep, Landslides, USSR—Pamir-Alai Mountains.

33-1647

Man-induced displacements of the upper forest line and their phytoidication. [Antropogennye smeshcheniia verkhnei granitsy lesa i ikh fitoindikatsiia].

Gorchakovskii, P.L., et al, Ekologiya, Sep.-Oct. 1978, No.5, p.5-17, In Russian. 51 refs.

Shiitov, S.G.

Forest lines, Alpine land forms, Alpine soils, Alpine vegetation, Plant ecology, Mosses, Lichens, Human factors, Bibliographies.

33-1648

Ecologic scheme of altitudinal zoning of vegetational cover in the Pamir-Alai mountains. [Ekologicheskai skhema vysotnoi poiasnosti rastitel'nogo pokrova Pamiro-Alai].

Agakhanians, O.E., Ekologiya, Sep.-Oct. 1978, No.5, p.18-24, In Russian. 30 refs.

Alpine soils, Alpine vegetation, Plant ecology, Ecosystems, USSR—Pamir-Alai Mountains.

33-1649

Ecology of anemoroze relict Thamnum neckeroides (Hook) Jaeg. moss in the Gornaya Shoriya taiga. [K ekologii mkha Thamnum neckeroides (Hook.) Jaeg. - nemoral'nogo relikta v taige Gornoj Shorii].

Gudoshnikov, S.V., Ekologiya, Sep.-Oct. 1978, No.5, p.84-85, In Russian. 9 refs.

Taiga soils, Taiga vegetation, Mosses, Plant ecology.

33-1650

Winter spreading of algae by air. [Rasprostranenie vodoroslei atmosferym vozdukhom zimoi].

Kuziakmetov, G.G., Ekologiya, Sep.-Oct. 1978, No.5, p.91-93, In Russian. 7 refs.

Algae, Snow composition, Propagation, Atmospheric circulation, Snow cover.

33-1651

Regularities of altitudinal distribution of plants in subpolar mountains of Eurasia. [Zakonmernosti vysotnogo raspredeleniia rastenii v pripoliarnykh gorakh Evrazii].

Kuvaev, V.B., Botanicheskii zhurnal, Aug. 1978, 63(8), p.1175-1187, In Russian. Refs. p.1186-1187.

Subarctic climate, Alpine soils, Alpine vegetation, Plant ecology, Ecosystems.

33-1652

Phytoplankton of the Angara River in the Ust'-Il'm Reservoir area before the regulation of its waterflow. [Fitoplankton r. Angary v rafone Ust'-Il'mskogo vodokhranilishcha do ee zaregulirovaniia].

Kobanova, G.I., Botanicheskii zhurnal, Aug. 1978, 63(8), p.1187-1196, In Russian.

Plankton, Flow control, Biomass, Hydroelectric power generation, USSR—Angara River.

33-1653

Floristic and ecological peculiarities of Bryophytes in the ecosystems of the Taymyr biological station area. [Floristicheskie i ekologo-tsennosticheskie osobennosti brioflory Taymyrskogo stantsionara].

Blagodatskikh, L.S., Botanicheskii zhurnal, Sep. 1978, 63(9), p.1274-1284, In Russian with English summary 14 refs.

Tundra soils, Tundra vegetation, Mosses, Plant ecology, Ecosystems.

Non-biogenic fixed nitrogen in antarctic surface waters. Bauer, E., et al, Nature, Nov. 2, 1978, 276(5683), p.96-97, Refs. Includes Reply by B.C. Parker et al and Comments by S.Z. El-Sayed. Biggs, D.C. Ice sheets, Ice composition, Water chemistry. Bauer takes exception to Parker et al's (32-2944 or F-19915) suggestion that auroral activity is a possible source of the non-biogenic fixed nitrogen content of antarctic ice, considering it likely that a large fraction of the fixed N would be destroyed photochemically before reaching the ground. He suggests galactic cosmic ray ionization as a mechanism for explaining the fixed N in antarctic snow. Biggs, in turn, disputes Parker et al's claim that inorganic nitrogen-laden ice originating on the antarctic continent might provide a major contribution to the N budget for the epipelagic zone of the Southern Ocean. Biggs concludes that the input of non-biogenic NO<sub>3</sub>-N and NH<sub>4</sub>-N derived from continental ice is probably insignificant in the overall nitrogen budget for epipelagic antarctic seas, although enrichment from melting ice may be locally important. It is also likely that biogenic NH<sub>4</sub>-N from zooplankton and nekton excretion far outweighs NH<sub>4</sub>-N input from continental ice.
- Parker et al contend that Biggs' calculations were based on mean values, assuming uniform mixing to a depth of 50 m, and icebergs are not distributed uniformly through time and space, nor are their nitrogenous contents uniform. With respect to Bauer's comments, Parker et al question the photochemical destruction of NO under the given circumstances and reject the galactic cosmic ray model. El-Sayed apologizes for a misprint in his data on nutrient data, which was referenced by Parker et al in their calculations.

Viscoelastic-plastic constitutive model with a finite element solution methodology.

Katona, M., *U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Civil Engineering Laboratory. Technical report*, June 1978, CEL-TR-866, 158p. ADA-057 684.

Viscoelasticity, Plastic properties, Mathematical models, Sea ice, Ice creep.

A textbook style development of viscoplasticity is presented. For completeness, the report also includes a detailed review of plasticity and viscoelasticity. The combination of plasticity and viscoelasticity is the basis for the so-called viscoelastic-plastic model developed herein. The viscoelastic-plastic model is compared to experimental data for plexiglas and sea ice to illustrate the versatility of the model in replicating nonlinear creep and flow of these materials. Moreover, the identification of the model parameters are shown to be no more difficult than the identification of parameters for the classical theories of plasticity and viscoelasticity.

33-1748

Investigation of ice clogged channels in the St. Marys River.

Vance, G.P., Wuebben, J.L., Frankenstein, G.E. Ice breaking, Ice jams, Channels (waterways), Cost analysis.

This study addresses itself to the problem of removing brash ice from Frechette Point to Six-Mile Point of the Little Rapids Cut of the St. Marys River system. The area and river system are described and estimates are made for partially clearing a channel 250 ft wide. Rough costs, based on dollars per horsepower, indicate that it would cost between 1 and 2 million dollars per clear channel mile per year.

Hydraulic structures, Snowdrifts, Models, Boundary value problems, Snow fences.  
A model investigation of drifting snow conditions was conducted in a hydraulic flume using a sand-water analog. Model results were evaluated to define modeling parameters that would allow quantitative correlation between measured prototype drift conditions and the model. Models of the fence were constructed for three heights and two geometric scales. Geometric scaling was based on terrain roughness and boundary layer thickness considerations, while velocity scaling was based on particle fall velocity and threshold of motion characteristics. Simulation of the atmospheric boundary layer was found to be of primary importance. Velocity scaling analysis suggested the use of a 'significant wind' concept, based on a combination of velocity magnitude and frequency. Similarity of precipitation rate was not essential, and could be altered within limits to adjust the time scale.

Wastes, Water chemistry, Isotopic labeling, Research projects.  
The fate of the mineral nitrogen in wastewater can be established only through natural or artificial stable isotopic labeling. This report assesses the possibilities and problems associated with such tracer techniques applied to the small amounts of nitrogen normally present after secondary waste treatment. The methods outlined for sample processing to minimize analytical errors are applicable to other types of environmental research involving isotope ratio analysis as a means of tracing nitrogen in the biosphere.

It is postulated that Huppert and Turner's laboratory studies (33-1453 or F-20907) of ice melt in warm, salt-stratified water, which demonstrate a system of tilted convection layers of melt mixture interleaved with ambient fluid, are useful in focusing research upon the complex phenomenon of iceberg melt but can not be extrapolated so directly to *in situ* antarctic iceberg melting as the authors have done, for several reasons. The reasons are enumerated.

33-1785

Use of infrared and visible imagery for sea ice monitoring. (McClain, E.P., Washington, D.C., National Environmental Satellite Service, 17p. + 14 figs., 35 refs. Unpublished manuscript. Background material for WMO Workshop on Remote Sensing of Sea Ice, Washington, D.C., Oct. 16-20, 1978.

Sea ice distribution, Pack ice, Ice forecasting, Infrared photography, Remote sensing, Infrared mapping, Photometers, Climatic factors, Aerial reconnaissance.

This is a supplement to and an updating of "Earth satellite measurements as applied to sea ice problems" (see 29-3205 or F-14829). Emphasis is given to the mapping of pack ice conditions and to the climatic effects of ice in the Arctic and Antarctic. The use of visible and infrared scanners carried on aircraft and spacecraft is described, and special processing of satellite data is discussed. The U.S. Navy has prepared weekly operational ice analysis and forecasts for the Arctic and Antarctic since 1970. Data were assembled into atlas form and published for the Arctic since 1972, and for the Antarctic since 1973. NOAA satellite data are used also for climate or climate-related investigations, i.e., to study sea ice variations in relation to climate, finding correlations between variations of annual mean temperature and the duration and extent of sea ice.

Shusherina, E.P., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.73-75, In Russian.  
Emel'yanova, L.V., Zharov, A.A.  
Frozen ground strength, Compressive strength, Ultimate strength.

33-1800

Shear strength of frozen ground at surfaces of adfreezing to materials. (O metodike opredeleniya soprotivleniya merzlykh gruntov sdvigu po poverkhnosti smerzaniya s materialami). Shusherina, E.P., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.76-79, In Russian.  
Shneiderova, V.V., Zharov, A.A., Nikolaev, A.A.  
Frozen ground, Adhesive strength, Concretes, Wood, Metals, Permafrost.

33-1801

Combined method of evaluating mechanical properties of thawing grounds. (Metod kompleksnoy otsenki mekhanicheskikh svoystv ottaivayushchikh gruntov). Gur'yanov, I.E., Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.79-80, In Russian.  
Ground thawing, Soil mechanics, Mechanical properties, Analysis (mathematics).

33-1802

Deformation of thawing bases. (Opredelenie deformatsiy ottaivayushchikh osnovaniy). Dubelkovskiy, S.G., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.81-82, In Russian.  
Nikolaev, A.M., Chaikin, A.A.  
Permafrost bases, Permafrost beneath structures, Ground thawing, Analysis (mathematics), Thaw penetration.

33-1803

Calculating compressibility of thawing ground from field data. (K raschetu kharakteristik szhimaemosti ottaivayushchikh gruntov po dannym polevykh opytov). Roman, L.T., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.84-86, In Russian.  
Pakhomova, G.M.  
Frozen ground strength, Compressive properties, Thaw depth, Analysis (mathematics).

33-1804

Studying properties of saline permafrost in the process of engineering investigations. (Osobennosti issledovaniya svoystv zasolennykh merzlykh gruntov pri inzhenernykh izyskaniyakh). Velli, I.U.I.A., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.86-87, In Russian.  
Aksenov, V.I.  
Shores, Cryogenic soils, Saline soils, Frozen ground temperature, Bearing strength, Foundations, Design, Arctic Ocean.

33-1805

Peculiarities of using hot stamps in studying compressibility of thawing ground. (Nekotorye osobennosti issledovaniya szhimaemosti ottaivayushchikh gruntov gorachimi shtampami). Zolotar', A.I., Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.89-91, In Russian.  
Ground thawing, Compressive strength, Analysis (mathematics).

33-1806

Ultimate compression-gage load on thawing ground used in field tests. (Predel'noye davlenie na ottaivayushchiy grunt v polevykh pressiometricheskikh ispytaniyakh). Gur'yanov, I.E., Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.91-93, In Russian.  
Ground thawing, Compressive strength, Measuring instruments.

33-1807

NMR method of studying phase composition of water in frozen rock. (Issledovaniya fazovogo sostava vody v merzlykh porodakh metodom IAMR). Ananian, A.A., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.94-95, In Russian.  
Volkova, E.V., Golovanova, G.F.  
Frozen rocks, Unfrozen water content, Measuring instruments, Nuclear magnetic resonance, Ground water, Phase transformations, Molecular structure, Ice structure.

33-1808

Combined method of investigating the effect of freeze-thaw cycles on changes in the composition, structure and properties of grounds. (K metodike kompleksnogo issledovaniya vliyaniya mnogokratnogo tsklicheskogo promerzaniya-ottaivaniya na izmenenie sostava, stroeniya i svoystv gruntov). Ershov, E.D., et al, Nauchnyy seminar: Metodika inzhenerno-geologicheskikh issledovaniy i kartirovaniya oblasti vechnoy merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3), Yakutskoe knizhnoe izdatel'stvo, 1977, p.97-99, In Russian.  
Cheverev, V.G., Kuchukov, E.Z., Dats'ko, P.S.  
Frozen fines, Clay soils, Freeze thaw cycles, Soil composition, Soil structure.

33-1809

Sublimation technique of determining phase composition of water in frozen ground. (Sublimatsionnyi metod opredeleniia fazovogo sostava vody merzlykh gruntov). Kudriavtsev, V.A., et al. Nauchnyi seminar: Metodika inzhenerno-geologicheskikh issledovanii i kartirovaniia oblasti vechnoi merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3). Yakutskoe knizhnoe izdatel'stvo, 1977, p.99-100, In Russian.  
Ground water, Phase transformations, Unfrozen water content, Ground ice, Permafrost.

33-1810

Planning experimental studies of heat and moisture transfer properties of grounds. (Planirovanie eksperimenta v issledovaniakh teplo- i vlagoprovodnosti gruntov). Mironov, A.A., et al. Nauchnyi seminar: Metodika inzhenerno-geologicheskikh issledovanii i kartirovaniia oblasti vechnoi merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3). Yakutskoe knizhnoe izdatel'stvo, 1977, p.102-105, In Russian.  
Efimenko, V.N.  
Permafrost thermal properties, Heat transfer, Moisture transfer, Measuring instruments, Frozen fines, Test equipment, Laboratory techniques.

33-1811

Spring and summer frost heave of active layers along the Arctic shores. (O puchenii v vesenne-letni period gruntov sezonnootaiavushchego sloia Arkticheskogo poberezh'ia). Shelkin, I.V., et al. Nauchnyi seminar: Metodika inzhenerno-geologicheskikh issledovanii i kartirovaniia oblasti vechnoi merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3). Yakutskoe knizhnoe izdatel'stvo, 1977, p.112-114, In Russian.  
Grishin, P.A., Nikitin, I.U.A.  
Buildings, Foundations, Permafrost beneath structures, Frost heave, Tundra soils, Active layer.

33-1812

Laboratory technique of determining frost heave characteristics of grounds. (Laboratornyi sposob opredeleniia puchiniistvkh svoistv gruntov). Ganeles, L.B., et al. Nauchnyi seminar: Metodika inzhenerno-geologicheskikh issledovanii i kartirovaniia oblasti vechnoi merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3). Yakutskoe knizhnoe izdatel'stvo, 1977, p.114-116, In Russian.  
Lapshin, V.I.A.  
Soil freezing, Frost penetration, Frost heave, Soil tests, Laboratory techniques.

33-1813

Laboratory technique for determining frost heave coefficients of clayey grounds. (K metodike laboratornogo opredeleniia koefitsienta moroznogo pucheniia ginitnykh gruntov). Karlov, V.D., Nauchnyi seminar: Metodika inzhenerno-geologicheskikh issledovanii i kartirovaniia oblasti vechnoi merzloty, Yakutsk, 1977. Tezisy dokladov. Vyp.3 (Seminar on methods of engineering-geological investigations and mapping in permafrost areas, Yakutsk, 1977. Abstracts of papers. Vol.3). Yakutskoe knizhnoe izdatel'stvo, 1977, p.119-120, In Russian.  
Clay soils, Frozen fines, Frost heave, Soil tests, Laboratory techniques.

33-1814

Proceedings, Vol.1.  
International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975, Moscow, Stroizdat, 1975, 375p., In Russian with English summaries. For individual papers see 33-1815 through 33-1851. Refs. passim.  
DLC TA682.43.157  
Winter concreting, Reinforced concrete, Prestressed concrete, Cements, Cement additives, Concrete admixtures, Concrete aggregates, Moisture content, Concrete freezing, Electric heating, Concrete strength, Concrete hardening, Concrete structures, Concrete piles.

33-1815

Cement hardening at low temperatures and the structure-forming role of water-soluble admixtures to concrete. (Tverdenie tsementov pri ponizhennykh temperaturakh i strukturoobrazuiushchaia rol' vodorastvorimykh dobavok k betonu). Butt, I.U.M., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.6-17, In Russian. English summary p.338.  
Kolbasov, V.M.  
DLC TA682.43.157

Winter concreting, Cements, Cement additives, Concrete hardening, Concrete freezing, Moisture content, Capillarity, Phase transformations.

33-1816

Effect of thermal incompatibility of ice and concrete on concrete hardening. (O vlianii termicheskoi nesovmestimosti l'da i betonnoi massy na tverdenie betona). Vashenin, B.V., International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.17-23, In Russian. English summary p.338. 4 refs.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Moisture content, Phase transformations, Concrete freezing, Ice formation, Concrete strength.

33-1817

Thermal regime of a concrete slab cast on frozen ground. (Teplovoi rezhim monolitnoi plity, zabetonirovannoi na merzloom gruntovom osnovanii). Gavrilsh, I.U.E., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.23-33, In Russian. English summary p.340. 3 refs.  
Khvorostovskaya, N.S., Serbin, V.G.  
DLC TA682.43.157

Frozen ground, Winter concreting, Concrete hardening, Concrete freezing, Concrete strength, Thermal regime, Concrete placing.

33-1818

Calculating the concrete strength increment at subzero and alternate temperatures. (Raschet narastaniia prochnosti betona pri otritsatel'nykh i znakoperemennykh temperaturakh). Ganin, V.P., International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.33-42, In Russian. English summary p.340. 13 refs.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Concrete strength, Concrete freezing.

33-1819

Influence of freezing on physico-mechanical properties of hydraulic concretes and measures taken to ensure its frost resistance. (Vlianie zamorazhivaniia na fiziko-mekhanicheskie svoistva gidrotekhnicheskogo betona i osnovnye meropriiatiia po obespecheniiu ego morozostoičnosti). Ginzburg, T.S.G., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.42-50, In Russian. English summary p.342.  
Litvinova, R.E., Sudakov, V.B.  
DLC TA682.43.157

Concrete structures, Hydraulic structures, Concrete freezing, Freeze thaw cycles, Concrete strength, Frost resistance.

33-1820

Solidification of concretes containing slag-alkali cements, at subzero temperatures. (Tverdenie betonov na shlakoshchelochnykh viazushchikh pri otritsatel'nykh temperaturakh). Glukhovskii, V.D., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.51-59, In Russian. English summary p.344. 7 refs.  
DLC TA682.43.157

Cement additives, Winter concreting, Concrete freezing, Concrete admixtures, Concrete hardening, Concrete strength, Cements.

33-1821

Structure and frost resistance of concretes with antifreeze admixtures. (Struktura i morozostoičnost' betonov s protivomoroznymi dobavkami). Grapp, A.A., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.60-68, In Russian. English summary p.344. 5 refs.  
Grapp, V.B., Kaplan, A.S.  
DLC TA682.43.157

Winter concreting, Concrete admixtures, Concrete strength, Frost resistance.

33-1822

Properties of concretes with antifreeze admixtures. (Svoistva betonov s protivomoroznymi dobavkami). Goncharova, L.S., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.69-81, In Russian. English summary p.346. 4 refs.  
Ivanov, F.M.  
DLC TA682.43.157

Winter concreting, Concrete freezing, Concrete admixtures, Antifreezes, Concrete hardening, Concrete strength.

33-1823

Temperature fields in structures built with electrically heated concrete mixtures. (Temperaturnye polia v konstruktssakh, zabetonirovannykh s elektrorozogrevom smesi). Zubkov, V.I., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.82-87, In Russian. English summary p.346. 3 refs.  
Tsiupka, N.K., Grossman, M.I.  
DLC TA682.43.157

Winter concreting, Concrete heating, Electric heating, Concrete hardening.

33-1824

Mechanism of concrete hardening and theoretical justifications for its acceleration. (Mekhanizm tverdeniia i teoreticheskie osnovy ego uskoreniiia). Kapranov, V.V., International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.88-96, In Russian. English summary p.348. 9 refs.  
DLC TA682.43.157

Concrete hardening, Winter concreting, Concrete aggregates, Cements, Theories.

33-1825

Influence of subzero temperatures on the deformation of concrete components and the formation of its structure. (Vlianie otritsatel'nykh temperatur na deformatsii komponentov i mekhanizm strukturoobrazovaniia betona). Korotkov, S.N., International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.96-108, In Russian. English summary p.348. 19 refs.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Concrete freezing, Cements, Structural changes.

33-1826

Influence of early freezing on concrete structure. (Vlianie rannego zamorazhivaniia na strukturu betona). Larionova, Z.M., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.108-114, In Russian. English summary p.350.  
Koketkina, A.I.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Concrete freezing, Concrete aggregates, Cements, Structural changes.

33-1827

Concrete failure due to freezing. (Razrushenie betona pri zamorazhivaniia). Moskvina, V.M., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.114-125, In Russian. English summary p.350.  
Golubikh, N.D.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Concrete freezing, Concrete strength, Concrete durability.

33-1828

Properties of cemented materials cooled during hardening. (O svoistvakh tsementnykh materialov, podvergavshikhsia okhlazhdeniiu v period tverdeniia). Mchedlov-Petrosian, O.P., et al. International Symposium on Winter Concreting, 2d, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.125-130, In Russian. English summary p.352. 5 refs.  
Cherniavskii, V.L.  
DLC TA682.43.157

Winter concreting, Concrete hardening, Concrete freezing, Concrete strength, Cements, Mortars.

33-1829

Heat release of concrete during winter placing. (Teplotyazhenie betona v usloviakh zimnego betonirovaniia). Okorokov, S.D., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.130-140. In Russian. English summary p.352. Parilskii, A.A. DLC TA682.43.157  
Winter concreting, Concrete freezing, Concrete hardening, Heat loss, Concrete placing.

33-1830

Studying epoxy based polymer mortars hardening at subzero temperatures. (Issledovanie polimerastvorov na epoksidnykh smolakh, tverdeishchikh pri otritsatel'noi temperature). Paturiov, V.V., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.140-143. In Russian. English summary p.354. Volgushev, A.N., Fetisova, I.B. DLC TA682.43.157  
Winter concreting, Cements, Mortars, Concrete hardening, Concrete freezing, Resins.

33-1831

Cast-in-situ reinforced concrete piles deeply placed in permafrost. (Monolitnye zhelezobetonnye svai-stolki glubokogo zalozheniia v vechnomerzlykh gruntakh). Poluektov, V.E., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.143-152. In Russian. English summary p.354. DLC TA682.43.157  
Pile foundations, Concrete piles, Reinforced concrete, Concrete placing, Concrete hardening, Concrete admixtures, Permafrost beneath structures.

33-1832

Studying hardening processes in concretes containing complex admixtures, at subzero temperatures. (Issledovanie protsessov tverdeniia betonov s kompleksnymi dobavkami pri temperature nizhe 0°C). Rozenberg, T.I., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.152-163. In Russian. English summary p.356. 8 refs. Tokar', V.B., Mamedov, A.A. DLC TA682.43.157  
Winter concreting, Concrete hardening, Concrete admixtures, Concrete strength.

33-1833

Industrial application of new combined antifreeze admixtures to concretes. (Nekotorye aktual'nye problemy promyshlennogo primeneniia novykh kompleksnykh protivomoroznykh dobavok v betony). Ratinov, V.B., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.163-172. In Russian. English summary p.356. 6 refs. Shestoporov, S.V., Chumakov, I.U.M., Mitkevich E.M. DLC TA682.43.157  
Antifreezes, Winter concreting, Concrete admixtures.

33-1834

Influence of antifreeze admixtures on physico-mechanical properties of concrete frozen in a freshly placed state. (Vliianie protivomoroznykh dobavok na fiziko-mekhanicheskie svoystva betona, podvergaiushchegosia zamorazhivaniu v rannem vozraste). Smelik, V.D., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.172-182. In Russian. English summary p.358. Modylevskii, A.B. DLC TA682.43.157  
Winter concreting, Concrete freezing, Concrete hardening, Concrete admixtures, Antifreezes, Concrete strength, Concrete placing.

33-1835

Winter concreting at the sites of the Bratsk and Ust'-Ilimsk hydroelectric power plants. (Zimnee betonirovanie na Bratskoi i Ust'-Ilimskoi GES). Alekseev, K.V., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.183-191. In Russian. English summary p.358. 7 refs. Gershanovich, G.L., Sadovich, M.A. DLC TA682.43.157  
Winter concreting, Concrete freezing, Concrete hardening, Hydraulic structures, Concrete placing.

33-1836

Theory and technology of concreting with electrically heated concrete mix. (Teoriia i tekhnologiia betonirovaniia s elektrorozgrevom smesi). Arben'ev, A.S., International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.191-199. In Russian. English summary p.360. 6 refs. DLC TA682.43.157  
Winter concreting, Concrete hardening, Concrete heating, Concrete placing.

33-1837

Electric pads for heating concrete in freezing weather. (Primenenie termoelektricheskikh matov dlia obogreva betona v zimnikh usloviakh). Akhanov, V.S., International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.199-207. In Russian. English summary p.360. 5 refs. DLC TA682.43.157  
Winter concreting, Concrete heating, Electric heating, Concrete hardening.

33-1838

Winter concreting techniques used in the Tagilstroil Trust, Central Ural Mountains. (Praktika zimnego betonirovaniia na Srednem Urale (na opyte ordena Lenina tresta Tagilstroil)). Biziaev, A.I., International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.207-215. DLC TA682.43.157  
Foundations, Concrete placing, Concrete freezing, Concrete heating, Concrete hardening, Concrete admixtures, Winter concreting.

33-1839

Erection of multistory solid concrete and masonry buildings in freezing weather without heating. (Stroitel'stvo mnogoetazhnykh monolitnobetonnykh i kamennykh zdaniy v zimnikh usloviakh besprognyym metodom). Bravinskii, E.A., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.216-227. In Russian. English summary p.362. Tokamkova, I.A., Ovcharov, V.I., Tsiron, M.F. DLC TA682.43.157  
Buildings, Winter concreting, Concrete strength, Concrete structures, Foundations, Concrete placing.

33-1840

Winter concreting with the use of electrically conductive coatings. (Zimnee betonirovanie s primeneniem tokoprovodiashchikh pokrytiy). Gendin, V.I.A., et al, International Symposium on Winter Concreting, 2nd, Moscow, Oct. 14-16, 1975. Proceedings, Vol.1, Moscow, Stroizdat, 1975, p.227-235. In Russian. English summary p.364. Glen, J.W.  
Ice structure, Ice dielectrics, Ice relaxation, Gas inclusions.  
The electrical behavior of ice which has been finely ground and compressed was investigated during aging in air and over a range of temperatures. The dielectric behavior may be accurately represented as the sum of two elliptical relaxation spectra. The behavior eventually stabilizes with similar activation energies for the mean relaxation time of each spectrum c. 0.25 eV, and the ratio of the relaxation times is ten in samples of density c. 0.42 Mg/cu m. Arguments are presented on whether the higher-frequency dispersion is a consequence of the heterogeneous nature of the samples or is a bulk relaxation process. The similarities between the behavior of such finely ground ice and of deposited snow and polar glacier ice are discussed. The extent to which the results may be attributed to surface adsorption of CO<sub>2</sub> are examined by reference to measurements of the CO<sub>2</sub> content of finely divided ice and ice from polar regions. Ice crystals, Hoarfrost, Dislocations (materials), Ice dielectrics.  
Dielectric properties of dislocation-free hoarfrost ice crystals were measured in the audio-frequency range. Anomalous small relaxation strength was found in the dislocation-free area of the crystal samples, while dislocations deliberately introduced by scratching the samples drastically modified the relaxation strength. Since measurements made in the area of high dislocation density indicated normal behavior, electrically charged dislocations are considered to be the source of the normally observed dielectric relaxation.

Ice optics, Ice structure, Refractivity, Anisotropy.  
Radio-echo observations have shown that polar ice *in situ* is birefringent. The most likely explanation of the birefringence is an anisotropy in the radio-frequency dielectric constant of the ice single crystal, combined with the ordering of the orientations of the ice crystals in polar ice. It is possible to calculate the birefringence of ice which has a distribution of crystal orientations, using a technique similar to that used to derive the dielectric properties of heterogeneous media. The experimentally observed birefringence may then be shown to be consistent with the crystal orientation fabric at the site of the observations, if the anisotropy of the dielectric constant is slightly less than 1%, that is, slightly less than the accuracy of the laboratory measurements which have failed to detect any anisotropy. Further experimental observations might be used to obtain information on not only the level of anisotropy of the single crystal but also on the crystal orientation fabric of the ice. (Auth.)

Clough, J.W., Bentley, C.R., Shabtaie, S.  
Glacier ice, Reflectivity, Ice dielectrics, Ice cover thickness, Dielectric properties.  
Values of relative permittivity measured by the wide-angle reflection technique on the Ross Ice Shelf show substantial variations between sites, from 3.09 to 2.89, with estimated errors of 0.03. The largest values, closest to those normally measured

in the laboratory, are found nearest to the grounded ice sheet; values decrease generally in the direction of thinner ice that has been longer on the ice shelf. We believe the variation reflects some real physical phenomenon in the ice shelf, either a true variation in the permittivity of the ice or a complication of the ray-path geometry, but are not able to offer a satisfactory model at present. Anelastic behaviour of polycrystalline ice. Duval, P., *Journal of glaciology*, 1978, 21(85), p.621-628, In English with French and German summaries. 21 refs. Ice mechanics, Ice creep, Strains.

Torsion creep tests were performed on glacier ice at temperatures above -12°C. The polycrystalline ice, when unloaded, exhibits creep recovery. The time-dependent recoverable component of deformation (or anelastic strain) is described in a mathematical relationship. The anelastic modulus for times in excess of 3h is always smaller than the dynamic elastic modulus. The movement of dislocations composing the sub-boundaries or in dislocation pile-ups may produce this important reversible deformation. The time-dependent recovery is explained in a similar way to the transient creep behavior observed at low temperatures for metals. The small temperature dependence of creep recovery would arise from the existence of a distribution of internal stress values. The samples used were taken in the French Alps and in Terre Adélie, Antarctica. (Auth. mod.)

Regulation and the deformation of wet snow. Colbeck, S.C., et al, *Journal of glaciology*, 1978, 21(85), MP 1172, p.639-650, In English with French and German summaries. 17 refs. Parssinen, N.

Wet snow, Regulation, Snow deformation, Models. The thermodynamics of phase equilibrium control the temperature distribution around the ice particles in wet snow. When the snow is stressed, pressure melting occurs at the inter-particle contacts and the snow densifies. Densification is described by a physical model which simulates the heat flow, meltwater flow, and particle geometry. The effects of ionic impurities, liquid saturation, and particle size are demonstrated. Typical values of the temperature difference, inter-particle film size, and density are calculated as functions of time. The calculated rates of compaction are too large; hence, at some later time, the effects of simultaneous grain growth must be added to the model.

Dry ice = Antarctica.  
Hogan, A.W., *Frontiers*, Autumn 1978, 43(1), p.17-19. DSI 505.73F93  
Climate, Ice crystal formation, Ice fog, Cloud seeding.  
This paper discusses Antarctica's unique climate with emphasis on ice crystal formation. The source of the moisture which moves over the Polar Plateau and causes the formation of the ice crystals, which are almost always in the air, is not fully understood. Some investigators hypothesize that saturated air persists because antarctic air is sometimes so clean that there are too few particles of dust or other solid substances to act as ice nuclei or centers for freezing. Others propose that saturated particle-free air is common over the Polar Plateau, and a few ice crystals from higher cirrus clouds passing over the continent precipitate to levels near the surface to provide the initial seeding of the saturated air. The crystals which result shed fragments which grow into additional crystals, creating a chain reaction of growth and producing spectacular displays. The presence of saturated air on cloudless days has been verified through seeding experiments. The importance of antarctic ice to world climate and weather is stressed.

Sea ice, Icebergs, Ice shelves, Ice breaking, Icebreakers, Ice navigation, Floating ice.  
The author describes the features of the ice regime of antarctic waters observed while on sea duty with Task Force 43, the U.S. Naval Support Force, Antarctica, from 1955 to 1959. Observations are made on sea and terrain ice features, icebreaker design, ice navigating, icebreaking operations, methods of moving ships, and resupply efforts. Brief mention is also made of the sights of the journey, i.e., marine wildlife, points of historical interest, etc.

Polar groundwater—a thermo-saline system. McGinnis, L.D., Colloquium on Planetary Water and Polar Processes, 2nd, Hanover, N.H., Oct. 16-18, 1978, (1978), p.6-8, 11 refs.

Ground water, Permafrost hydrology, Periglacial processes, Hydrogeology, Water flow, Thermal factors, Salinity, Antarctica—McMurdo Sound.

Hydrogeologic features discovered during the course of the Dry Valley Drilling Project in the McMurdo Sound suggest a dynamic—contemporary and ancient—hydrogeologic system, despite the fact that the mean annual sea level temperature has probably not risen above -18°C in the last several million years. This system is superimposed upon a static, freeze-immobilized,

permafrost terrain. A hole drilled into McMurdo Sound from sea ice, over 122m of water, encountered fresh water (probably ice) at 30 m below bottom. This water is terrestrial in origin and has been preserved at least since the last sea level lowering during Pleistocene time. Hydrochemical stratification evidenced in most DVDP boreholes reveals a record that is interpreted as alternating terrestrial and marine deposition.

Glacial deposits, Subglacial observations, Sediments, Grain size, Antarctica—Ross Ice Shelf.

Glaciomarine sediments with middle Miocene microfossil assemblages are exposed at the sea floor below the southern Ross Ice Shelf. Plio-Pleistocene sediments are not present. Post-Miocene glacial sediments may have been deposited but removed by relatively recent ice shelf grounding. A meager Recent microfauna is present in some core tops. (Auth.)

33-2004

Ross Ice Shelf sea temperature.

Gilmour, A.E., *Science*, Feb. 2, 1979, 203(4379), p.438-439, 6 refs.

Ice shelves, Ice melting, Ice water interface, Water temperature, Antarctica—Ross Ice Shelf.

Two temperature profiles recorded by a sensitive bathythermograph at the Ross Ice Shelf Project site are presented. From the shape of the profiles it is concluded that an inflow of water at intermediate depths provides a source of heat to drive a

regime in which ice is melted from the interface at a depth of 360 m. Melting maintains the temperature of a thick layer under the ice at about -2.14°C, close to the ambient freezing temperature. A very well-mixed layer about 35 m thick was found at the seabed. (Auth.)

**Climatic changes, Ice cover effect.**

Large-scale features of the structure and circulation of the southern hemisphere oceans, including the major water-mass boundaries and the antarctic pack ice, are discussed. The authors describe some implications of ocean dynamics for climatology.

DLC QC981.8.C5C56  
**Climatic changes, Ice sheets.**

Isotope ratios indicating surface temperature variations will correspond to lower temperature simply due to higher surface elevations as well as to climatic change. How to separate the indications of elevation change from those of true climatic fluctuations was the problem the author addressed. He develops a theory and model, then compares results with observed data from Camp Century, Vostok and Byrd cores, showing many similarities.

DLC QC981.8.C5C56  
**Climatic changes, Ice sheets, Glacier surges.**

Three possible external causes for abrupt climatic changes are discussed: solar events (a change in the solar constant); frequent volcanic activity; and a surge of the antarctic ice sheet. The author proposes that an antarctic surge, potentially catastrophic in its effect on world climate, could be perhaps prevented by concerted international efforts if early warning were provided by sea ice monitoring.

**Ice age theory, Ice sheets, Glacier surges.**

The author reviews the status of various theories concerning the triggering of ice ages. With regard to the idea that periodic ma-

JOR surges of the antarctic ice sheet may be a causal factor, he comments that, although conclusive evidence has not been adduced for this theory yet, particularly by proving a sudden rise in a sea level followed by a slower eustatic fall, antarctic surging is still a possible explanation for ice age initiation.

**Climatic changes, Ice sheets, Glacier surges.**

The authors discuss their model for glacier surge in terms of the characteristics of the Wilkes Land ice sheet, the Lambert-Amery basin, and the West Antarctic-Ross basin. It appears that, if the model is valid for the areas studied, the present profile is one typical of the post-surge slow buildup stage, not the pre-surge state considered by some glaciologists to presage an ice age.

**Airplanes, Engines, Cold weather tests, Antarctica.**

A two-phase program was conducted to determine the necessity for continued structural modifications to the JATO rocket motor Mk 6 Mod 1 hangers for use in antarctic operations on LC-130 aircraft. Phase I was the acquisition of shock and vibration loads experienced by the JATO motors during actual aircraft takeoffs from antarctic field stations. The worst case conditions measured were experienced during JATO takeoff from Dome Charlie Station. Phase II was the analysis of the data and the formulation and conduct of a vibration test at Indian Head of 12 motors, simulating the worst case conditions experienced in Antarctica. It was concluded that the unmodified JATO motor hangers were adequate for use under the most extreme antarctic conditions. (Auth.)

Sulfate content in the antarctic ice cap. Vilenskii, V.D., et al, U.S. Army Foreign Science and Technology Center. Translation, July 1977, FSTC-430-77, 15p., ADB 025-550, For Russian original, see F-14003 or 29-892. 19 refs. Koroleva, N.I.

Ice sheets, Ice composition, Snow composition, Sulfate.

Sulfate concentration in ice can be determined by turbidimetry or titrimetry in comparison with concentration by evaporation. Sulfate concentration in the snow of antarctic littoral regions varies within wide limits with no seasonal character. Sulfate concentration decreases with distance from the coast. It is assumed that sulfate is deposited primarily by dry precipitation.

33-2066

Large-scale numerical model of sea ice. Parkinson, C.L., et al, Journal of geophysical research, Jan. 20, 1979, 84(C1), p.311-337, Refs. p.335-337. Washington, W.M.

Sea ice distribution, Ice cover thickness, Ice models, Snow cover, Ice resistivity, Water temperature, Meteorological factors.

Work at the National Center for Atmospheric Research has resulted in the construction of a large-scale sea ice model capable of coupling with atmospheric and oceanic models of comparable resolution. The sea ice model itself simulates the yearly cycle of ice in both the northern and the southern hemispheres. Horizontally, the resolution is approx 200 km, while vertically the model includes four layers, ice, snow, ocean, and atmosphere. Both thermodynamic and dynamic processes are incorporated, the thermodynamics being based on energy balances at the various interfaces and the dynamics being based on the following five stresses: wind stress, water stress, Coriolis force, internal ice resistance, and the stress from the tilt of the sea surface. Although the ice within a given grid square is of uniform thickness, each square also has a variable percentage of its area assumed ice free. The model results produce a reasonable yearly cycle of sea ice thickness and extent in both the Arctic and the Antarctic. In the Antarctic the ice expands from a minimum in Mar. to a maximum in late Aug., remaining close to the continent in the former month and extending northward of 60S in the latter month. Maximum thicknesses are about 1.4 m. The distribution of modeled ice concentrations correctly reveals a more compact ice cover in the northern hemisphere than in the southern hemisphere. (Auth. mod.)

**Short-wave radiation attenuation by snow cover, ice and water investigated on the basis of data gathered in the Mirnyy area.** (Oslablenie korotkovolnovoi radiatsii snezhnoi tolshchey, l'dom i vodoi po dannym nabliudenii v raione observatorii Mirnyy). Adamenko, V.N., *Sovetskaia antarkticheskaia ekspeditsiia. Trudy*, 1977, Vol.64, p.64-71, In Russian. 12 refs.  
**Attenuation, Radiation, Ice physics, Ice optics, Snow optics, Snow physics, Sea water, Light transmission, Antarctica—Mirnyy Station.**  
Results of studying short-wave radiation penetration into snow, ice and water using highly sensitive instruments are presented. Conditions of short-wave radiation attenuation in water with and without ice cover are compared. Changes in illumination up to 100-200 m are related to short-wave radiation attenuation. The basic characteristics of attenuation by water and ice of both light and short-wave radiation in pack ice of various thicknesses are identified. The problem of attenuation of light and short-wave radiation by snow cover on the continent between the 105th and 125th km along the Mirnyy-Vostok traverse route is also investigated.

Field soundings using an impulse radar system were carried out during May 1976 along a section of the Alyeska Pipeline near Pump Station 3 and the pump station feeder gas pipeline trench near the Happy Valley Camp, Alaska. The radar system, operating on the ground, provided a continuous profile of the near-surface geological structure of the permafrost. A unique dual antenna configuration produced two profiles, a vertical profile and an offset profile, from which the velocity of the radar signal at any point along the traverse could be calculated and from which a representative depth scale for the subsurface profile was determined. The profile results proved useful in identifying regions of massive ice in the permafrost. Logs from holes drilled for the oil pipeline's Vertical Support Members are compared with the radar profile data. This comparison shows that the radar detected the top and bottom of massive ice to a depth of approximately 30 ft.

**Ice lenses, Ice formation, Soil moisture, Soil freezing, Heat transfer, Frost heave, Analysis (mathematics).**  
A new concept of the freezing of water, called segregation freezing, is proposed to explain the creation of the suction force that draws pore water up to the interface of a growing ice lens. The temperature of segregation freezing is shown to be lower than that of normal freezing (in situ freezing). This difference determines the pressure that the ice lens exerts while growing and carrying the overlying weight. On the assumption that the soil structure is rigid, equations governing the simultaneous flow of heat and water are formulated and solved for the limit of time  $t$  to 0 with the combination of analytical and numerical methods. Numerical computation of the solution yields a result that is reasonable, compared with experience in laboratory and nature.

Glacier flow, Creep rate, Ice refrigeration, Mining, Drilling, Analysis (mathematics), Ice temperature.  
A scheme for cooling the lower portion of the edge of the Greenland ice sheet, which abuts a potential mining operation is examined. At the mine site, the ore body is overlain with ice. Once the overburden is removed, however, the adjacent ice is expected to flow toward the pit. One possible means of slowing this movement is to cool the ice below its present temperature to achieve a reduction in the creep rate and a retardation of basal slip. The present study examines analytically the magnitude of cooling which may be accomplished by drilling a series of vertical holes about the periphery of the mine site. Refrigeration is accomplished by pumping a coolant downhole in a central pipe, then uphole in an annulus between the pipe and hole wall, and then through a thin walled pipe exposed to the cold surface climate above the ice sheet. Results of example calculations for various particular combinations of the free parameters are examined and include cooling requirements, hold spacing, pump requirements, and other parameters. Over a period of operation on the order of a year or more, it appears possible to cool a substantial part of the lower area of the glacier on the order of -1 to -2°C, using a hole spacing that is considered reasonable. The results of the study are to be used as input to a detailed glacier flow study.

Meldrum, D.T.  
Radio echo soundings, Subglacial observations, Glaciology, Terrain analysis, Ice cover thickness, Airborne equipment.  
Radio echo sounding field work during the 1977-78 austral summer included evaluation of new radio echo sounding and magnetometer installations, extension of previous work on the 100-km grid coverage in east Antarctica, extension of the 50-100 km grid in west Antarctica; terrain analysis in the Wilkes Subglacial Basin, flow-line studies upstream of Vostok and downstream of Byrd stations, investigation of internal layering at Dome C, and studies of the Ross Ice Shelf. The radio echo sounding equipment and airborne data system are described and preliminary results are given for the glaciological, geological, and geophysical studies. The first large sub-ice lake to be discovered in west Antarctica was detected along the western flank of the Ellsworth Mts. between the Sentinel and Heritage ranges. The water body is at least 13 km in extent and occupies a bedrock hollow beneath about 3,500 m of ice.

British Antarctic Survey, 1977-78. *Polar record*, Sep. 1978, 19(120), p.273-278.  
Research projects, Glaciology, Radio echo soundings, Ice shelves.  
Five main British Antarctic Survey stations were occupied throughout the year: Faraday, Halley, Signy, Grytviken, and Rothera. Studies were conducted in marine and terrestrial biology, limnology, geology and field geophysics, glaciology, and the atmospheric sciences. The main biological activity of the year was the initiation of an Offshore Biological Program (OBP), directed toward studies of the role of krill in the ecosystem, its environment, biology and biochemistry, together with the biology of some of its principal predators.

Meier, S.  
Glacier flow, Flow rate, Calving, Geodetic surveys, Glacier mass balance, Photogrammetric surveys, Antarctica—Hays Glacier, Antarctica—Campbell Glacier, Antarctica—Assender Glacier.  
This short report presents data on flow rate and calving measurements obtained from the Hays, Campbell and Assender Glaciers by Soviet and German scientists since 1972. The results of photogrammetric survey show that the velocity of the Campbell Glacier's tongue is about 300 m/yr, and the Hays, Campbell and Assender Glaciers are found in constant flow (state of permanent surge). Topographic maps of the three glaciers are given at different scales.

Bacteria, Microbiology, Algae, Ice, Snow, Rivers, Lakes, Ice caves.  
Psychrophiles and the ecology of microbial activity at cold temperatures are discussed under the following headings: atmospheric environment; caves; freshwater environments; soils; rivers and streams; marine environments; and snow and ice. Antarctic species are dealt with under a number of these topics, especially in connection with microbial activity in lakes and ponds.

Snow, glaciers, ice sheets. (Śniegi, lodowce, lądolody).  
Kosiba, A., Warsaw, Wydawnictwa Szkolne i Pedagogiczne, 1978, 184p., in Polish. 66 refs.  
Snow, Ice, Glaciology, Climate.  
This textbook is a general introduction to concepts of glaciology, snow and ice physics, climatology of cold regions, cold area hydrology and other related topics. Physical and chemical characteristics of snow and ice, snow cover features, glaciers, river and lake ice, sea ice, continental ice sheets of Antarctica and Greenland, and climate are each the subject of a chapter. The book is illustrated with many photographs.

Resilient response of two frozen and thawed soils. Chamberlain, E.J., et al, *American Society of Civil Engineers. Geotechnical Engineering Division. Journal*, Feb. 1979, 5(GT2), MP 1176, p.257-271, 13 refs.  
Cole, D.M., Johnson, T.C.  
Subgrade soils, Seasonal freeze thaw, Soil mechanics, Stresses, Low temperature tests.  
Values of resilient modulus and Poisson's ratio were determined for silt and clay subgrade materials subjected to seasonal freezing and thawing. A new technique employing noncontacting variable impedance transducers was employed to obtain radial strain data for calculation of Poisson's ratio. The data were analyzed using multiple linear regression and analysis of variance techniques to obtain empirical relationships between the resilient moduli and Poisson's ratio parameters and stress and material property variables. Resilient modulus data ranged from over 6,000,000 psi for the frozen condition to less than 600 psi for the thawed condition. Poisson's ratio ranged from 0.07 to 0.61, the majority of the values falling between 0.03 and 0.50.

RISP/RIGGS bypasses limits of man-made disciplines. *American Geophysical Union. Transactions*, Oct. 1978, 59(10), p.906-908.  
Ice shelves, Ice cores, Ice sheets.  
One of the sessions of the 1978 American Geophysical Union spring meeting focused on the Ross Ice Shelf Project (RISP). This paper briefly summarizes the presentations made at the meeting. Reports on the meteorology, geochemistry, marine geophysics, biology, and geologic history of the 500-m-deep ice shelf were included. The sampling area, site J9, is 411 km from the open waters of the Ross Sea. Biological interest in the waters and sediment below the Ross Ice Shelf focused on whether or not organisms could live under the ice at large distances from the open waters of the Ross Sea. Diatoms, microzooplankton, zooplankton, and metabolically active bacteria populations were found along with amphipods and fish.

Lichens of cold deserts. Lindsay, D.C., *Lichen ecology*, edited by M.R.D. Seward, London, Academic Press, 1977, p.183-209, Refs. p.206-209.  
DLC QK583.L5  
Lichens, Deserts, Vegetation.  
This chapter is concerned mainly with the lichens of the cold deserts surrounding the Poles, especially the Antarctic, which has been mentioned as a probable center of evolution of many plant groups before the onset of the Late Cenozoic glaciations. Some aspects of the ecology of cold desert lichens are discussed, present distribution patterns are outlined and compared for the lichens of both polar regions, and an attempt is made to reconstruct changes in the lichen flora of Antarctica in relation to the Late Cenozoic glaciation and to show how present-day distribution patterns were attained.

Extract from the annual report: Antarctic Division 1977-78.  
Australia. Department of Science. Antarctic Division, Canberra, Australian Government Publishing Service, 1978, 38p., Refs. p.32-33.  
Research projects, Glaciology, Engineering, Antarctica.  
Administrative and research activities of the Antarctic Division are discussed. The Division continued to provide support for the Australian National Antarctic Research Expeditions and to undertake its own Antarctic and Australia-based research in glaciology, upper-atmosphere physics, cosmic rays, biology, and medical science. Research programs in these disciplines are reviewed as well as activities in the following areas: scientific instrumentation, engineering, communications, photography, aviation, the Enderby Land survey and relief voyages. Papers and reports resulting from the year's work are listed.
- 33-2229**  
Evaluation of the northern part of West Siberia for updating topographic maps. (Otsenka territorii Severa Zapadnoi Sibiri dlia obnovleniia topograficheskikh kart).  
Mirtova, I.A., Russia. *Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Geodeziia i aerofotos'emka*, 1978, No.4, p.118-123, In Russian. 6 refs.  
Arctic topography, Topographic maps, Tundra terrain, Forest tundra, Aerial photographs, USSR—Yamal Peninsula.
- 33-2230**  
Selecting tractors for mounted rippers of frozen ground. (Vybór bazovogo traktora dlia statiko-dinamicheskogo rykhleniia merzlykh gruntov).  
Gorovits, V.B., et al, Russia. *Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Geologiya i razvedka*, Oct. 1978, No.10, p.157-161, In Russian. 5 refs.  
Gromyko, A.V., Shenderov, V.I.  
Earthwork, Excavating equipment, Frozen ground.
- 33-2231**  
Variations in ground resistance to tangential force of cutting. (Dinamika tangentsial'nogo soprotivleniia grunta rezaniui).  
Samokhin, S.A., *Vsesoiuznyi nauchno-issledovatel'skii institut zheleznodorozhnogo transporta. Vestnik*, 1978, No.6, p.44-46, In Russian. 4 refs.  
Excavating equipment, Frozen ground.
- 33-2232**  
Mathematical methods of classifying soils in the central Ob' River flood plain. (Matematicheskie metody diagnostiki pochv polnyi srednei Obi).  
Sheremet, B.V., et al, Moscow. *Universitet. Vestnik. Seria 17 Pochvovedenie*, July-Sep. 1978, No.3, p.18-24, In Russian with English summary. 3 refs.  
Rozhkov, V.A., Afanas'eva, T.V.  
Taiga soils, Classifications, Mathematical models, USSR—Ob' River.
- 33-2233**  
Formation of rock streams in the Chul'manskaya trough. (Osobennosti protsessov kurumooobrazovaniia na territorii Chul'manskoi vpadiny).  
Tiurin, A.I., et al, Moscow. *Universitet. Vestnik. Seria 4 Geologiya*, Sep.-Oct. 1978, No.5, p.106-108, In Russian.  
Poltev, N.F.  
Rock streams, Cryogenic processes, Freeze thaw cycles, Frost penetration, Frost shattering, Formation.
- 33-2234**  
Provisions for urban construction along the Baykal Amur railroad. (Opyt obespecheniia stroitel'stva goroda na trasse BAMa).  
Savel'ev, R., Na stroikakh Rossii, Oct. 1978, No.10, p.55-57, In Russian.  
Buildings, Permafrost beneath structures, Baykal Amur railroad, Design, Construction materials.
- 33-2235**  
Future of northern villages. (Budushchee severnoi derevni).  
Kuz'min, V., Na stroikakh Rossii, Aug. 1978, No.8, p.18-21, In Russian.  
Urban planning, Buildings, Roads, Construction materials, Design.
- 33-2236**  
Preventing deformations. (Ne dopuskat' deformatsii).  
Mikhailov, N.A., et al, *Put' i putevye khoziaistvo*, 1978, No.11, p.11-13, In Russian.  
Pogrebnoi, A.K.  
Railroad tracks, Embankments, Permafrost beneath structures, Frost heave, Settlement (structural), Baykal Amur railroad.
- 33-2237**  
How to prevent embankment settlement. (Kak predotvratit' osadku nasypel').  
Guletskii, V.V., et al, *Put' i putevye khoziaistvo*, 1978, No.11, p.14, In Russian.  
Pogrebnoi, A.K., Minaillov, G.P.  
Railroads, Embankments, Permafrost beneath structures, Settlement (structural), Countermeasures.
- 33-2238**  
Universal snowplow. (Universal'nyi snegochistitel').  
Teklin, V.G., *Put' i putevye khoziaistvo*, 1978, No.11, p.18-19, In Russian.  
Snow removal equipment, Railroad tracks, Roads.
- 33-2239**  
Snowplow adjusted for ballasting. (Snegochistitel' razravnivaet ballast).  
Kamaev, O.B., et al, *Put' i putevye khoziaistvo*, 1978, No.11, p.40, In Russian.  
Khomitskaia, V.V.  
Railroads, Embankments, Construction equipment, Snow removal equipment.
- 33-2240**  
Evaluating natural conditions in the Baykal Amur railroad area from a set of survey maps. (Otsenka prirodnnykh uslovii trassy BAM na osnove kompleksa obzornykh kart).  
Grafskii, B.V., et al, *Razvedka i okhrana nedr*, Oct. 1978, No.10, p.49-51, In Russian.  
Ziling, D.G.  
Economic development, Permafrost distribution, Landscape types, Permafrost hydrology, Maps, Cryogenic processes, Cryogenic formations, Baykal Amur railroad.
- 33-2241**  
Searching for water supply sources in the Baykal Amur railroad area. (Poiski istochnikov vodosnabzheniia v zone BAMa).  
Kurinovs, T.A., et al, *Razvedka i okhrana nedr*, Aug. 1978, No.8, p.49-50, In Russian.  
Mikhail'tsov, V.A., Shevchenko, V.K.  
Permafrost distribution, Water supply, Permafrost hydrology, Springs (water), Taliks, Baykal Amur railroad.
- 33-2242**  
Relation between brittle failure of excavating equipment and the long-lasting influence of climatic factors. (Sviaz' khрупkikh razrushenii metallokonstruktsii ekskavatorov s dlitel'nyim vozdeistviem klimaticheskikh faktorov).  
Makhno, D.E., Russia. *Ministerstvo vysshego i srednego spetsial'nogo obrazovaniia. Izvestiia vysshikh uchebnykh zavedenii. Gornyi zhurnal*, 1978, No.8, p.94-97, In Russian.  
Mining, Earthwork, Excavating equipment, Metals, Brittleness, Cold weather operation.
- 33-2243**  
High resolution observations of under-ice morphology.  
Francois, R.E., Washington (State). *University. Applied Physics Laboratory*, Mar. 31, 1977, APL-UW-7712, 36p. ADA-039 753.  
Sea ice, Ice bottom surface, Pressure ridges, Acoustic measuring instruments, Subglacial observations.
- 33-2244**  
Dynamics of the recovery of damaged tundra vegetation. Annual progress report.  
Amundsen, C.C., Knoxville, University of Tennessee, 1976, 17p. ORO-4180-6.  
Tundra vegetation, Damage, Land reclamation.
- 33-2245**  
Ice buoy demonstration program.  
Bitting, K.R., U.S. Coast Guard Research and Development Center. Report, June 1975, CGR/DC-15/75, 32p. ADA-031 309.  
Lake ice, Ice navigation.
- 33-2246**  
Alaska sewage lagoons.  
Clark, S.E., et al, College, Alaska, Environmental Protection Agency, 1970, 25p., PB-258 814, Presented at the International Symposium on Sewage Lagoons, 2nd, Kansas City, June 1970.  
Coutts, H.J., Jackson, R.L.  
Sewage treatment, Aeration.
- 33-2247**  
Energy propagation and coupling studies for line transducers.  
Starr, J.B., U.S. Air Force Rome Air Development Center. Technical report, Aug. 1976, RADC-TR-76-239, 239p. ADA-031 741.  
Frozen ground mechanics, Seismic reflection, Underground facilities, Frost penetration, Soil structure, Measuring instruments.
- 33-2248**  
Offshore Arctic gas: can it be produced economically. *World oil*, Oct. 1977, 185(5), p.106/1-106/M.  
Offshore drilling, Gas production, Hydraulic structures, Equipment.
- 33-2249**  
How permafrost freeze/thaw creates wellbore loading.  
Goodman, M.A., *World oil*, Oct. 1977, 185(5), p.107-112, 24 refs.  
Permafrost physics, Soil mechanics, Freeze thaw cycles, Boreholes, Loads (forces).
- 33-2250**  
Can offshore Arctic gas be produced economically. Getting the gas to market.  
Bartel, H.R., et al, *World oil*, Nov. 1977, 185(6), p.64-68.  
Geddes, R., Loveday, M., Ruben, P.  
Gas production, Transportation, Tanker ships, Liquefied gases.
- 33-2251**  
Arctic drilling operations present unique problems.  
Goodman, M.A., *World oil*, Nov. 1977, 185(6), p.95-110, 17 refs.  
Frozen ground mechanics, Permafrost structure, Ground thawing, Hydrates, Drilling fluids.
- 33-2252**  
Norwegian and Barents Seas: oil for the 21st century.  
King, R.E., *World oil*, Dec. 1977, 185(7), p.69-76, 4 refs.  
Oil recovery, Offshore drilling, Geologic structures, Norwegian Sea, Barents Sea.
- 33-2253**  
Here's what to consider when cementing permafrost.  
Goodman, M.A., *World oil*, Dec. 1977, 185(7), p.81-90, 17 refs.  
Cements, Cold weather performance, Compressive strength, Freeze thaw cycles, Frozen ground mechanics, Well casings.
- 33-2254**  
Logging, coring and testing for permafrost evaluation.  
Goodman, M.A., *World oil*, Jan. 1978, 186(1), p.93-99, 24 refs.  
Permafrost physics, Permafrost thermal properties, Well logging, Drill core analysis, Unfrozen water content, Hydrates, Ground thawing.
- 33-2255**  
Designing casings and wellheads for Arctic service.  
Goodman, M.A., *World oil*, Feb. 1, 1978, 186(2), p.44-48, 60, 12 refs.  
Well casings, Ground thawing, Permafrost preservation, Compressive strength, Strains, Steels.
- 33-2256**  
Completion equipment fulfills special Arctic needs.  
Goodman, M.A., *World oil*, Mar. 1978, 186(4), p.60-70, 12 refs.  
Drilling, Equipment, Cold weather construction, Permafrost control.
- 33-2257**  
How permafrost affects offshore wells and structures.  
Goodman, M.A., *World oil*, May 1978, 186(6), p.90-95, 31 refs.  
Offshore structures, Artificial islands, Submarine permafrost, Permafrost beneath structures, Frost heave, Ground thawing, Subsidence.

- 33-2258  
CO2 permafrost and Martian topography.  
Lambert, R.S.J., et al, *Icarus*, June 1978, 34(3), p.568  
580, 30 refs.  
Chamberlain, V.E.  
Mars (planet), Topographic features, Carbon dioxide,  
Permafrost, Extraterrestrial ice.
- 33-2259  
Cathodic protection of a hot pipeline in frozen earth.  
O'Connell, J.M., *Materials performance*, May 1977,  
16(5), p.13-21, Includes comment by G.L. Doremus  
and reply by O'Connell. 7 refs.  
Hot oil lines, Corrosion prevention, Frozen ground  
physics, Electrical resistivity, Electricity.
- 33-2260  
Influence of salt on the freeze-thaw deterioration of  
concrete.  
Cantor, T.R., et al, *Materials performance*, May 1977,  
16(5), p.28-32, 9 refs.  
Knicker, C.P.  
Concrete strength, Freeze thaw cycles, Concrete du-  
rability, Salinity.
- 33-2261  
Mechanical dispersal of oil stranded in the littoral  
zone.  
Owens, E.H., *Canada. Fisheries Research Board  
Journal*, May 1978, 35(5), p.563-572, In English with  
French summary. 19 refs.  
Oil spills, Beaches, Shores, Sea ice, Water waves,  
Environmental impact.
- 33-2262  
Microbial ecology studies of the *Metula* spill in the  
Straits of Magellan.  
Colwell, R.R., et al, *Canada. Fisheries Research  
Board. Journal*, May 1978, 35(5), p.573-580, In En-  
glish with French summary. 9 refs.  
Mills, A.L., Walker, J.D., Garcia-Tello, P., Campos-P.,  
V.  
Oil spills, Countermeasures, Bacteria, Environmental  
impact.
- 33-2263  
Prudhoe crude oil in Arctic marine ice, water, and  
sediment systems: Degradation and interactions with  
microbial and benthic communities.  
Atlas, R.M., et al, *Canada. Fisheries Research Board  
Journal*, May 1978, 35(5), p.585-590, In English with  
French summary. 7 refs.  
Horowitz, A., Budosh, M.  
Oil spills, Sea ice, Sea water, Sediments, Environ-  
mental impact.
- 33-2264  
Research on heat conduction with freezing (2nd re-  
port): Freezing of material systems containing aqua-  
solutions).  
Hattori, M., et al, *Japanese Society of Mechanical En-  
gineers. Bulletin*, Oct. 1978, 21(160), p.1507-1513, 5  
refs. For 1st report see 30-3251.  
Katayama, K., Araki, M., Takakuda, K., Yamano, K.  
Ice formation, Heat loss, Conduction.
- 33-2265  
Freezing around a cooled pipe in crossflow.  
Okada, M., et al, *Japanese Society of Mechanical En-  
gineers. Bulletin*, Oct. 1978, 21(160), p.1514-1520,  
14 refs.  
Katayama, K., Terasaki, K., Akimoto, M., Mabune, K.  
Water pipes, Water flow, Ice formation, Ice growth.
- 33-2266  
Abstracts of papers presented at the 7th conference  
on ground water in Siberia and the Far East. (Tezisy  
dokladov).  
Soveshchanie po podzemnym vodam Sibiri i Dal'nego  
Vostoka, 7th, Irkutsk and Novosibirsk, 1973, Irkutsk,  
1973, 177p., In Russian. For selected abstracts see  
33-2266 through 33-2277.  
DLC GB1155.T49  
Permafrost hydrology, Ground ice, Subpermafrost  
ground water, Chemical composition, Supraperma-  
frost ground water, Moisture transfer, Active layer,  
Water pollution, Environmental protection.
- 33-2267  
Physico-chemical processes originating during ice  
melting and their role in the formation of chemical  
composition of ground and surface mineral waters.  
(Fiziko-khimicheskie protsessy pri obrazovanii i taianii  
l'da i ikh rol' v formirovanii khimicheskogo sostava  
podzemnykh i poverkhnostnykh mineral'nykh vod),

Proceedings.  
High Altitude Revegetation Workshop No.3, Fort  
Collins, Colorado, March 13-14, 1978, *Colorado  
State University, Fort Collins. Environmental Re-  
sources Center. Information series*, May 1978,  
No.28, 213p., Refs. passim. For selected papers see  
33-2279 through 33-2285.  
Kenny, S.T., ed.  
Revegetation, Alpine vegetation, Plant ecology,  
Slope stability, Grasses, Plants (botany).
- 33-2279  
Aspects of the ecology of alpine and subalpine plants.  
Billings, W.D., *Colorado. State University, Fort Col-  
lins. Environmental Resources Center. Information  
series*, May 1978, No.28, p.1-16, 21 refs. Includes  
discussion.  
Alpine vegetation, Plant ecology, Environmental im-  
pact, Ecosystems, Revegetation.

33-2280

Problems in the identification of threatened and endangered plant species.

Buckner, D.L., *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.17-24, 5 refs. Includes discussion.

Alpine vegetation, Protection, Environmental impact, Plants (botany), Ecosystems.

33-2281

Use of the Plant Information Network (PIN) in high altitude revegetation.

Dittberner, P.L., et al, *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.52-74, 5 refs. Includes discussion.

Bryant, G.

Revegetation, Alpine vegetation, Computer applications, Classifications.

33-2282

Grass and legume improvement for high altitude regions.

Kenny, S.T., et al, *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.84-100, 4 refs. Includes discussion.

Cuany, R.L.

Revegetation, Alpine vegetation, Growth, Plants (botany), Grasses.

33-2283

Development of plant materials for revegetation in Alaska.

Mitchell, W.W., *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.101-115, 27 refs. Includes discussion.

Revegetation, Tundra vegetation, Grasses, United States—Alaska.

33-2284

Hazard identification, chemical removal and revegetation of a toxic chemical spill on Lawson Hill, San Miguel County.

Groeneveld, D.P., et al, *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.142-153.

O'Boyle, P.S.

Revegetation, Plant ecology, Chemistry, Soil pollution, Glacial till, Slope processes.

33-2285

Steep slope design and revegetation techniques.

Erammer, R.L., *Colorado. State University, Fort Collins. Environmental Resources Center. Information series*, May 1978, No.28, p.162-167, Includes discussion.

Radar anisotropy of sea ice due to preferred azimuthal orientation of horizontal c axes of ice crystals.

Kovacs, A., et al, *Journal of geophysical research*, Dec. 20, 1978, 83(C12), MP 1139, p.6037-6046, 36 refs.

Morey, R.M.

Sea ice, Radar echoes, Anisotropy, Ice crystal structure, Electromagnetic properties, Ocean currents.

Results of impulse radar, ice crystal c axis, and subice current measurements on the fast ice near Narwhal Island, Alaska, are presented. The crystal structure of the ice was found to have a horizontal crystal c axis with a preferred azimuthal orientation. This orientation was found to align with the direction of the current at the ice-water interface. Impulse radar reflection measurements revealed that the preferred orientation of the sea ice crystal structure behaved as a microwave polarizer. It was observed that when the antenna E field was oriented parallel with the c axis of the crystal platelets, a strong reflection of the radar signal from the bottom of the ice was obtained. However, when the antenna E field was oriented perpendicular to the c axis, no bottom reflection was detected. The results of this study fully support earlier reports of sea ice inhomogeneity and anisotropy in reference to both structure and electromagnetic energy transmission.

33-2287

Oxygen isotope investigation of the origin of the basal zone of the Matanuska Glacier, Alaska.

Lawson, D.E., et al, *Journal of geology*, 1978, Vol.86, MP 1177, p.673-685, 34 refs.

Kulla, J.B.

Glacier ice, Ice structure, Oxygen isotopes, Thermodynamic properties.

An analysis of the oxygen isotope content of ice of the englacial and basal zones of the Matanuska Glacier at its terminus reveals the origin of the ice and entrained debris. The decrease with depth in the change of O18 values of ice of the diffused facies of the englacial zone and the dispersed facies of the basal zone is consistent with previous studies and indicates this ice originates in the accumulation area. Characteristics of the ice and debris of the dispersed facies indicate a subglacial source for

most of the debris. The sharp increase of more than 4 per mill in the change of O18 values of ice of the lower, stratified facies of the basal zone and its young radiocarbon age indicate this facies formed by subglacial freezing of isotopically enriched meltwater, probably surface-derived, to the glacier sole. The bubble-poor, fine-grained ice, thickness, stratification, rounded pebbles, and undisturbed sedimentary structures in this facies support this conclusion. The location, extent, and rates of subglacial ice formation and sediment entrainment vary. The Matanuska Glacier is therefore thermally complex, with zones of ice at the glacier sole that are at or below the pressure-melting point.

33-2293

Climatic change.

Gribbin, J., ed, London, Cambridge University Press, 1978, 280p., Refs. For selected papers see 33-2294 through 33-2298 or F-21190, I-21187 through I-21189, and I-21191.

Climatic changes, Ice sheets, Snow cover, Sea ice, Heat balance, Isotope analysis, Glaciation.

This volume contains fourteen contributions on the subject of climatic change, arranged under the following headings: studying the climates of the past, balancing the global heat budget, astronomical influences, modelling the changing climate, and climate and man. A paper by H. Flohn (1974; 30-2570 or I-16225), providing an overall model of the initiation of a glaciation, is contained in an appendix.

33-2294

Geological-geophysical framework of ice ages.

Tarling, D.H., Climatic change, edited by J. Gribbin, London, Cambridge University Press, 1978, p.3-24, Refs. p.20-25.

DLC QC981.8.C5C55

Ice age theory, Climatic changes, Glaciation, Ice sheets, Paleoclimatology.

This discussion identifies some of the characteristics of previous ice ages and evaluates the significance of various geological and geophysical factors that have influenced past climatic changes and may be responsible for current change. With the arguable exception of the Late Precambrian Ice Age(s), the most notable feature of all ice ages is that they only occur at high latitudes, mostly within 30 deg of the pole. Throughout the Mesozoic, the South Pole was close to Antarctica, but it was only after it

became located inland that ice sheet formation commenced. The drift of the Gondwanan continent to the situation where the pole, by Middle Permian times, was merely on the edge of the land mass seems to coincide with the rapid, simultaneous disappearance of ice sheets throughout the Gondwanan continent, leaving only isolated mountain glaciers until the continent drifted sufficiently far back under the pole in Miocene times. It seems, therefore, that it is essential for the pole to lie well within a continental block before ice sheets can form, with shallow, epicontinental seas sufficiently near to provide a moisture supply.

33-2295

Isotope studies.

Duplessy, J.C., Climatic change, edited by J. Gribbin, London, Cambridge University Press, 1978, p.46-67, 122 refs.

DLC QC981.8.C5C55

Climatology, Ice sheets, Ice cores, Isotope analysis.

The application of oxygen isotopic analysis in benthic and pelagic foraminifera in deep sea cores is examined, with particular attention given to the factor controlling the isotopic composition of a given foraminifera specimen and to the assessment of which of these factors are likely to have changed in the past. The O-18 content of sea water is directly related to the extent of the continental ice volume; the larger the ice sheets formed on the continent, the heavier the isotopic composition of the sea water. The isotopic compositions of ice cores from Camp Century, Byrd Station, and the Vostok borehole, are examined. An upper limit of delta = -30 per mill has been estimated for the mean isotopic composition of continental excess ice during the latest glacial maximum. The isotopic balance between sea water and continental ice demonstrates that the increase of the mean O-18/O-16 of ocean water during the last glacial period was at least 1.2 per mill, in line with the benthic foraminifera and ice cap evidence.

33-2296

Heat balance of the Earth.

Budyko, M.I., Climatic changes, edited by J. Gribbin, London, Cambridge University Press, 1978, p.85-113, 48 refs.

DLC QC981.8.C5C55

Ice cover effect, Snow cover effect, Albedo, Heat balance.

This paper treats the heat balance of the Earth's surface, the Earth-atmosphere system and the atmosphere, as well as the water balance of the Earth. The effects of arctic and antarctic snow and ice cover on the albedo to the Earth's surface and the Earth-atmosphere system are taken into account.

33-2297

Recent changes in snow and ice.

Kukla, G.J., Climatic change, edited by J. Gribbin, London, Cambridge University Press, 1978, p.114-129, 36 refs.

DLC QC981.8.C5C55

Snow cover, Ice conditions, Pack ice, Sea ice, Ice sheets, Insolation, Climatic changes.

Observations on the sensitivity of snow and ice fields in both hemispheres to the seasonal march of insolation are summarized. In the southern hemisphere, the extent of the antarctic pack-ice fields is especially sensitive to insolation in early Nov. Higher insolation to pack-ice fields at this time should result in shorter ice seasons and a smaller average extent of the pack. Minimum global extent of snow and ice and minimum radiation losses over snow and ice areas are reached in Aug. and Sep.

33-2298

Global influences of mankind on the climate.

Kellogg, W.W., Climatic change, edited by J. Gribbin, London, Cambridge University Press, 1978, p.205-227, Refs. p.223-227.

DLC QC981.8.C5C55

Ice conditions, Sea ice, Pack ice, Climate, Heat balance, Surface temperature, Human factors.

Studies of the global influences of mankind on climate lead to the conclusion that barring a major natural perturbation to the climate, mankind's activities will in all likelihood warm the Earth in the next few decades. It is expected that the rate will be appreciably larger than any change of mean surface temperature seen in the past 100 yr. The greatest changes will probably take place in the polar regions. Four regimes of arctic and antarctic ice and snow are considered: winter snow cover on the land that melts in summer; floating sea ice or pack ice; mountain glaciers; and the ice sheets of Greenland and the Antarctic. It is considered unlikely that the polar ice masses will be greatly affected by anthropogenic warming in the next century or so.

Field guide for portland cement concrete construction in Antarctica.

Keeton, J.R., *U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Civil Engineering Laboratory. Technical note*, Oct. 1969, NCEL-TN-1060, 18p., AD-861 520, 3 refs.

Cements, Concretes, Construction materials, Cold weather construction.

The guide was prepared for field use by military crews in producing, placing and curing portland cement concrete in Antarctica under summer temperatures down to 15F. Since the principal factors are mix control and mix temperature during production and exposed surface temperature control for 3 days following placement, these steps are discussed in considerable detail. The technical information presented in this document is based on field experiments at McMurdo Station, during Deep Freeze 69. (Auth. mod.)

33-2307

Icebreaker propulsion systems feasibility study. Vol.7. Mission sensitivity analyses.

NUS Corporation, Rockville, Md., Its report No.323, Feb. 1967, 51p. AD-861 585.

Icebreakers, Engines, Cost analysis.

The feasibility of polar icebreaker propulsion systems is studied. A ship with the characteristics of the reference design can accomplish approx 50% of individual antarctic scientific missions in the continuing mode, and 100% in the ramming mode. The results of the analysis appear to amply reinforce the validity of prior conclusions as to the superior cost effectiveness of nuclear propulsion systems for proposed polar icebreakers.

Investigation of creep instability as a mechanism for glacier surges. Paterson, W.S.B., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No.32, p.82-92, In Russian and English. Discussion p.190-191, 278-280. 30 refs.

Nitsan, U., Clarke, G.K.C. Glacier surges, Glacier flow, Glacier heat balance, Mathematical models, Antarctica—Byrd Station, Antarctica—Law Dome, Antarctica—Meserve Glacier.

A schematic model is offered to analyze creep instability as a possible mechanism for glacier surges. The main differences between the authors' analysis and those of previous workers are 1) inclusion of the effect of vertical advection, an important means of heat transfer, and 2) use of the Arrhenius relation for the temperature dependence of the flow law of ice rather than an approximation to it. Theoretical predictions are compared to field data gathered at three antarctic glaciers, two in Greenland, and a number in Canada.

33-2333

Internal heating and surges of nontemperate glaciers. (Vnutrennyi razogrev i podvizhki kholodnykh lednikov). Bozhinski, A.N., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.92-98, 210-213. In Russian and English. Discussion p.191, 278-279. 19 refs.

Grigorian, S.S. Glacier flow, Glacier heat balance, Glacier movement, Glacier surges, Antarctica—Meserve Glacier. Temperature gradients, heat conductivity, heat balance and pressure are discussed with relation to the possibility of analyzing flow and surging in cold glaciers. The mathematical analysis supports the theory that cold glacier movement is tied to internal heating especially at the bed. Data on a number of cold glaciers, including the Meserve Glacier in Antarctica, are compared in a chart.

33-2334

Theory of glacier oscillations. (Teoriia kolebani lednikov). Shumskii, P.A., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.99-109, 213-233. In Russian and English. Discussion p.191-192, 279-280. 8 refs.

Glacier oscillation, Glacier ice, Glacier movement, Glacier surfaces.

33-2335

Sliding velocity of a surge-type glacier during its quiescent phase of motion. Bindshadler, R., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.109-117, 224-229. In Russian and English. Discussion p.192-193, 280-281. 10 refs.

Raymond, C., Harrison, W. Glacier movement, Glacier surges, Glacier ice, Glacier surfaces, Analysis (mathematics).

33-2336

Longitudinal compressive stresses in pulsating glaciers. (Prodol'nye napriazheniia szhatiia v pul'siruiushchem lednike). Volkovskii, K.F., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.117-123, 229-232. In Russian and English. Discussion p.193, 280. 2 refs.

Glacier surges, Glacier ice, Stresses.

33-2337

Numerical calculation of adjustment of a glacier surface to perturbations of ice thickness. Landon, J., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.123-133, 233-239. In Russian and English. 20 refs.

Raymond, C. Glacier ice, Ice cover thickness, Glacier surfaces.

33-2338

Ablation streams as regulators of glacier pulsations. (Vozmozhnost' regulirovaniia roli zhidkogo stoka v rezhime pul'siruiushchego lednika). Kazanski, A.B., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.133-137, 239-243. In Russian and English. Discussion p.193, 281. 4 refs.

Glacier ablation, Glacial hydrology, Runoff, Glacier surges.

33-2339

Studying the mechanism and causes of glacier surges by the natural analogues technique. (Izuchenie prichin i mekhanizma lednikovyykh podvizhek metodom prirodnykh analogov). Litosh, V.A., *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.137-143, 243-247. In Russian and English. 19 refs.

Glacier movement, Glacier surges, Models, Computerized simulation, Slope processes, Glacial erosion.

33-2340

Periodically surging Medvezhi Glacier matched with a general ice flow model. Budd, W.F., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.143-161, 247-260. In Russian and English. Discussion p.194-197, 281-285. 19 refs.

McInnes, B.G. Glaciers, Models, Glacier ice, Glacier movement, Flow rate, Glacier surges.

33-2341

Balance of the pulsating Medvezhi glacier as the basis for forecasting its periodic surges. (Balans pul'siruiushchego lednika Medvezh'ego kak osnova prognozirovaniia ego periodicheskikh podvizhek). Dolgushin, L.D., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.161-170, 260-265. In Russian and English. Discussion p.197-198, 285-286. 4 refs.

Osipova, G.B. Mountain glaciers, Glacier movement, Glacier surges, Glacier ice, Flow rate, Mass balance, Glacier ablation, Glacier surfaces, Alimentation, Avalanches.

33-2342

Surges of former ice sheets: their mechanism and environmental impact. Grosswald, M.G., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.170-184, 265-273. In Russian and English. 45 refs.

Hughes, J., Denton, G.H. Ice sheets, Ice growth, Ice deterioration, Dynamic properties, Ice shelves.

33-2343

Causes and nature of glacial oscillations in Pleistocene obtained by computer simulation. (Prichiny i kharakter lednikovyykh kolebani v Pleistotsene po dannym modelirovaniia na EVM). Sergin, V.I.A., et al, *Akademiia nauk SSSR. Institut geografii. Materialy gliatsiologicheskikh issledovani. Khronika obsuzhdeniia*, Jan. 1978, No. 32, p.184-190, 274-277. In Russian and English. Discussion p.198-199, 285-286. 26 refs.

Sergin, S.I.A. Pleistocene, Glacier oscillation, Theories, Tectonics, Volcanoes, Meteorological factors, Geothermy.

33-2344

Tidal marshes in cold regions, particularly the St. Lawrence estuary. (Caractéristiques des schorres des régions froides, en particulier de l'estuaire du Saint-Laurent). Dionne, J.C., *Zeitschrift für Geomorphologie. Supplement*, July 1972, No.13, p.131-162. In French with English and German summaries. 46 refs.

Swamps, Tides, Estuaries, Sediment transport, Drift, Climatic factors, Canada—Saint Lawrence Estuary.

33-2345

Glaciers of the Mont Blanc Range (north slope) 1974-1977. (Les glaciers du massif du Mont-Blanc (versant nord) de 1974 à 1977). Veyret, P., *Revue de géographie alpine*, 1978, 66(2), p.105-113. In French.

Mountain glaciers, Glacier flow, Glacial erosion, Moraine, Glacial features, Glacier ablation, Alpine glaciation.

33-2346

Subglacial karst and its relation to deep karst. (Les karsts sous-glaciaires et leurs relations avec le karst profond). Maire, R., *Revue de géographie alpine*, 1978, 66(2), p.139-148. In French with English summary.

Karst, Subglacial caves, Glacial hydrology, Meltwater.

33-2347

Glacial and nival karst phenomena on the geomorphological map of the Southern Devoluy, Bure and Aurouze Plateaus. (Phénomènes glacio-karstiques et nivo-karstiques sur la carte geomorphologique de Devoluy meridional, plateaux de Bure et d'Aurouze). Nicod, J., *Revue de géographie alpine*, 1978, 66(2), p.149-165. In French with English summary.

Karst, Glacial features, Cirque glaciers, Glacial hydrology, Frost shattering, Talus, Nivation.

33-2348

Development of perennially frozen ore and placer deposits. (Razrabotka vechnomerzlykh rudnykh i rospynnykh mestorozhdenii poleznykh iskopaemykh). Emel'ianov, V.I., ed, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, 110p., In Russian. For selected papers see 33-2349 through 33-2357. Refs. passim.

Placer mining, Artificial melting, Permafrost preservation, Artificial freezing, Ground ice, Permafrost hydrology, Permafrost, Cost analysis.

33-2349

Calculating hydraulic thawing of perennially frozen water-permeable rocks. (K raschetu gidravlicheskogo ottaivaniia massivov merzlykh vodopronitsaemykh porod). Perlshtein, G.Z., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.3-6, In Russian. 3 refs.  
Zinchenko, A.I., Korshunov, G.I.  
Frozen rocks, Artificial melting, Ground ice, Frozen sand, Peat, Heat transfer, Analysis (mathematics).

33-2350

Nomogram for calculating heat release of a "plane" seepage flow. (Nomogramma dlia rascheta teplootdachi "ploskogo" fil'tratsionnogo potoka). Chernykh, E.I.A., *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.7-10, In Russian. 3 refs.  
Placer mining, Heat transfer, Artificial melting, Ground ice, Permafrost, Analysis (mathematics), Water seepage.

33-2351

Numerical solution of the problem on hydraulic melting of permafrost. (K chislennomu resheniiu zadachi o gidravicheskom ottaivani merzlykh porod). Ignatov, A.A., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.10-20, In Russian. 11 refs.  
Perlshtein, G.Z., Chernykh, E.I.A.  
Placer mining, Heat transfer, Artificial melting, Permafrost, Analysis (mathematics), Water seepage.

33-2352

Studying thermal effect of water vapor condensation in sand dumps of underground excavations. (Issledovanie teplovogo effekta kondensatsii parov vody v otvalakh peskov podzemnoi dobychi). Zinchenko, A.I., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.21-29, In Russian. 6 refs.  
Papernov, I.M.  
Tailings, Frozen sand, Water vapor, Vapor transfer, Phase transformations, Mining, Arctic climate.

33-2353

Calculating heat-carrier temperature in the cold-air freezer tubes. (K raschetu temperatury teplonositelia v vozdukhnykh morozil'nykh kolonkakh). Znamenskiĭ, V.V., *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.30-46, In Russian. 4 refs.  
Permafrost hydrology, Taliks, Artificial freezing, Heat transfer, Analysis (mathematics).

33-2354

Computerized solution of the problem on ice lining of underground excavations. (Reshenie zadachi o ledianoi oblitovke podzemnykh vyrabotok na EVM). Chaban, P.D., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.47-58, In Russian. 6 refs.  
Gutin, I.M., Koriagina, T.N.  
Linings, Underground storage, Ice cover thickness, Permafrost, Analysis (mathematics), Computer applications.

33-2355

Thermal regime of rocks around deep shafts. (Temperaturnyi rezhim porod, okruzhaiushchikh stvol'y glubokikh shakht). Kalmykov, P.N., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.59-73, In Russian. 3 refs.  
Dedukh, I.U.M.  
Placer mining, Mine shafts, Permafrost structure, Ground ice, Frozen rock temperature, Permafrost thermal properties.

33-2356

Interpretation of some regularities of ground water formation, based on allowance for vertical zonality of water balance elements. (Interpretatsiia nekotorykh zakonov formirovaniia podzemnykh vod na osnove ucheta vertikal'noi zonal'nosti elementov vodnogo balans). Katiurina, S.O., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.74-81, In Russian. 6 refs.  
Motrich, L.T., Papernov, I.M., Pril'mak, A.I.  
Permafrost distribution, Water supply, Permafrost hydrology, Suprapermafrost ground water, Alluvium, Subpermafrost ground water, Taliks, Charts, Valleys, USSR—Kolyma River.

33-2357

Approximate calculation of heat source intensities for the electrical melting of frozen rocks. (Priblizhennyĭ raschet intensivnosti teplovykh istochnikov pri elektricheskom ottaivani merzlykh porod). Perlshtein, G.Z., et al, *Magadan. Vsesoiuznyi nauchno-issledovatel'skii institut zolota i redkikh metallov. Sbornik nauchnykh trudov*, 1977, Vol.37, p.82-87, In Russian. 5 refs.  
Savenko, L.P.  
Frozen rocks, Artificial melting, Electric heating, Heat sources, Heat transmission, Analysis (mathematics).

33-2358

Symposium Geography of Polar Countries. Extended summaries. International geographical congress, 23rd, Moscow, Jul.-Aug. 1976, Leningrad, Gidrometeoizdat, 1976, 164p.  
DLC G578.S95  
Glaciers, Ice sheets, Avalanches, Slope processes, Soils, Permafrost hydrology, Glacial rivers, Maps, Snow cover distribution, Ice (water storage), Snow water content.

33-2359

Calculation of ice edge movement during freezing from aerial survey data of the Syr-Dar'ya River. (O raschete prodvizheniia kromki l'da pri zamerzaniĭ po dannym aviarazvedok (na primere Syr-Dar'ya)). Arkhipov, V.A., *Tashkent. Gosudarstvennyi universitet. Nauchnye trudy*, 1964, Vol.237, p.153-160, In Russian. 5 refs.  
Ice formation, Ice edge, Aerial surveys, Ice forecasting, USSR—Syr Dar'ya River.

33-2360

Glaciation of the Chile River Basin. (K voprosu ob oledeneniĭ basseina reki Chile). Suslov, V.F., *Tashkent. Gosudarstvennyi universitet. Nauchnye trudy*, 1964, Vol.237, p.178-185, In Russian. 7 refs.  
River basins, Mountain glaciers, Nivation, Allmentation, Glacial hydrology, Glacial rivers, Glacial deposits, Aerial photographs, USSR—Chile River.

33-2361

Problems of the Arctic and the Antarctic; collection of articles, Vol.43-44. Treshnikov, A.F., ed, New Delhi, Amerind Publishing Co., 1978, 20/p, TT-75-52082. For individual papers see 33-2362 through 33-2380. For Russian original see 29-2009 through 29-2027.

Ice navigation, Drift, Ice reporting, Ice forecasting, Atmospheric circulation, Ocean currents, Ice formation, Ice cover thickness, Ice air interface, Ice water interface, Heat transfer, Mathematical models.

33-2362

Some problems of numerical experiments with atmosphere-ocean interaction involving polar ice. Borisenkov, E.P., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.2-17, TT-75-52082, For Russian original see 29-2009. 6 refs.

Ice navigation, Drift, Ice reporting, Ice forecasting, Atmospheric circulation, Ocean currents, Mathematical models.

33-2363

Ice cover as a product of atmosphere-ocean interaction.

Doronin, I.U.P., et al, *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.18-30, TT-75-52082, For Russian original see 29-2010. 10 refs.  
Sychev, V.I.

Ice navigation, Ice formation, Ice cover thickness, Polynyas, Air temperature, Heat transfer, Ice water interface, Ice air interface, Ocean currents, Drift, Mathematical models.

33-2364

Modeling of combined planetary dynamics of the ocean-atmosphere system.

Efimov, V.A., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.31-41, TT-75-52082, For Russian original see 29-2011. 3 refs.

Air water interactions, Atmospheric circulation, Ocean currents, Heat transfer, Weather forecasting, Sea ice, Drift.

33-2365

Empirical studies of global auto-oscillatory processes in the hydrosphere and the atmosphere of the earth. Iakovleva, N.I., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.42-55, TT-75-52082, For Russian original see 29-2012. 11 refs.

Ice navigation, Ocean currents, Atmospheric circulation, Air water interactions, Heat transfer, Synoptic meteorology, Long range forecasting, Arctic regions.

33-2366

Estimation of some small forces in the hydrodynamic equations of the atmosphere and the ocean.

Nagurnyi, A.P., et al, *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.56-60, TT-75-52082, For Russian original see 29-2013. 3 refs.

Savchenko, V.G.

Drift, Weather forecasting, Long range forecasting, Sea ice, Ice navigation, Air water interactions, Polar regions.

33-2367

Influence of the ice cover on the heat exchange between the atmosphere and the ocean.

Doronin, I.U.P., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.61-72, TT-75-52082, For Russian original see 29-2014. 15 refs.

Sea ice distribution, Ice cover thickness, Air water interactions, Heat transfer, Glacier ice, Heat balance, Solar radiation, Albedo.

33-2368

Some mechanisms of atmosphere-ocean interaction under stormy weather conditions.

Borisenkov, E.P., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.73-83, TT-75-52082, For Russian original see 29-2015. 5 refs.

Storms, Air water interactions, Heat transfer, Mathematical models, Arctic seas.

33-2369

Moisture, heat and momentum exchange between atmosphere and ocean under different conditions of the surface of the sea.

Bortovskii, R.S., et al, *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.84-93, TT-75-52082, For Russian original see 29-2016. 10 refs.

Biutner, E.K.

Atmospheric circulation, Ocean currents, Storms, Water waves, Air water interactions, Heat transfer, Analysis (mathematics).

33-2370

Energy exchange between the ocean and the atmosphere in the north polar region.

Khrol, V.P., *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.94-101, TT-75-52082, For Russian original see 29-2017. 12 refs.

Sea ice, Polynyas, Ice cover thickness, Ice surface, Snow cover distribution, Water temperature, Air temperature, Air water interactions, Heat transfer, Analysis (mathematics).

33-2371

Determination of internal stresses in the ice cover generated during ice drift.

Ivchenko, V.O., et al, *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.102-111, TT-75-52082, For Russian original see 29-2018. 10 refs.

Khelsin, D.E.

Sea ice, Drift, Ice cover thickness, Stresses, Strains, Analysis (mathematics).

33-2372

Calculation of interaction between ice fields in the hydrodynamic model of ice drift.

Appel, I.L., et al, *Problems of the Arctic and the Antarctic; collection of articles*, 1978, Vol.43-44, p.112-120, TT-75-52082, For Russian original see 29-2019. 16 refs.

Gudkovich, Z.M.

Sea ice, Drift, Mathematical models, Arctic Ocean.

- 33-2373  
Use of numerical methods for modelling autumn-winter ice phenomena in the Arctic seas.  
Smetannikova, A.V., et al, *Problems of the Arctic and the Antarctic: collection of articles*, 1978, Vol.43-44, p.121-129, TT-75-52082, For Russian original see 29-2020. 6 refs.  
Tettelbaum, K.A.  
Ice navigation, Ice forecasting, Sea water, Cooling rate, Ice formation, Ice conditions, Mathematical models.
- 33-2374  
Influence of ice cover on internal waves generated by atmospheric disturbances in a continuously stratified sea.  
Bukatov, A.E., et al, *Problems of the Arctic and the Antarctic: collection of articles*, 1978, Vol.43-44, p.130-138, TT-75-52082, For Russian original see 29-2021. 17 refs.  
Cherkesov, L.V.  
Sea ice, Ice cover thickness, Water waves, Wave propagation, Ice water interface, Ice friction, Analysis (mathematics).

Special needs and problems of high-altitude revegetation in national parks.  
Stevens, D.R., Colorado. State University, Fort Collins. *Environmental Resources Center. Information series*, Aug. 1976, No.21, p.83-91, 9 refs.  
Alpine vegetation, Revegetation, National parks, Land reclamation.
- 33-2403  
Revegetation and stabilization of roadsides on Vail Pass.  
Gregg, J., Colorado. State University, Fort Collins. *Environmental Resources Center. Information series*, Aug. 1976, No.21, p.92-101.  
Revegetation, Alpine vegetation, Slope stability.

- 33-2404  
Forest service high-altitude revegetation. Hendzel, L., Colorado. State University, Fort Collins. Environmental Resources Center. Information series, Aug. 1976, No.21, p.102-107, 6 refs. Alpine vegetation, Revegetation, Forest land.
- 33-2405  
Plant materials. Cuany, R.L., Colorado. State University, Fort Collins. Environmental Resources Center. Information series, Aug. 1976, No.21, p.110-116. Alpine vegetation, Plants (botany), Revegetation, Classifications, Acclimatization.
- 33-2406  
Casing programs for gas wells in permafrost regions. (Konstruktsii gazovykh skvazhin v raionakh mnogoletnemerzlykh porod). Griaznov, G.S., Moscow, Nedra, 1978; 137p., In Russian with English table of contents enclosed. 41 refs. Concretes, Petroleum industry, Cements, Natural gas, Gas wells, Well casings, Well completion, Permafrost.
- 33-2407  
On the strains in the drifting sea ice in the Arctic Basin. Legen'kov, A.P., Akademiia nauk SSSR. Izvestiya. Atmospheric and oceanic physics, 1977 (Published May 78), 13(10), p.728-733, Translated from its Izvestiya. Fizika atmosfery i okeana. 7 refs. Sea ice, Drift, Ice cover thickness, Strains, Arctic Ocean.
- 33-2408  
Permafrost in the Angara River and Lake Baykal areas. (Merzlye porody Priangara i Pribalkal'ia). Leshchikov, F.N., Novosibirsk, Nauka, 1978, 141p., In Russian with English table of contents enclosed. Refs. p.131-140. DLC GB648.79.L47  
Permafrost distribution, Permafrost structure, Ground ice, Permafrost physics, Permafrost thermal cycles, Active layer, Cryogenic processes, Human factors, Environmental protection, USSR—Angara River, USSR—Baykal Lake.
- 33-2409  
Effect of snow cover on the formation of the deficit and excess of total monthly precipitation in the southern part of the European USSR and West Siberia. Babkin, A.V., Soviet hydrology: Selected papers, 1977, 16(2), p.123-126, For Russian original see 32-4199. 6 refs.  
Precipitation (meteorology), Air temperature, Humidity, Weather forecasting, Snow cover effect, Snow line, Snow depth, Charts.
- 33-2410  
Numerical study of the two-dimensional flow of a binary mixture with a vapor-ice phase transition at the channel wall. Volynets, A.Z., et al. Journal of engineering physics, Aug. 1978, Pub. Feb. 79, 35(2), p.953-957, Translated from Inzhenerno-fizicheskii zhurnal. 12 refs. Postnikov, V.M.  
Ice vapor interface, Water vapor, Phase transformations, Ice growth, Ice sublimation, Analysis (mathematics).
- 33-2411  
Frost resistance of wall plates. (Morozostoikost' fasadnykh plitok). Ryschenko, M.I., et al. Stroitel'nye materialy i konstruktsii, Jan.-Mar. 1978, No.1, p.33-34, In Russian. Livson, Z.A., Samoilenko, E.P.  
Buildings, Construction materials, Prefabrication, Plates, Frost resistance.
- 33-2412  
Hydrogeology of the Komi Autonomous Soviet Socialist Republic and the Nenets National District in the Arkhangelsk Region of the RSFSR. (Komi ASSR i Nenetskiĭ natsional'nyi okrug Arkhangel'skoĭ oblasti RSFSR). Chernyi, V.G., ed. Gidrogeologiya SSSR, Vol.42, Moscow, Nedra, 1970, 188p., In Russian with English table of contents enclosed. Refs. p.279-288. DLC GB1108.K6K6  
Arctic climate, Tundra soils, Tundra vegetation, Taiga soils, Taiga vegetation, Forest tundra, Permafrost distribution, Permafrost structure, Permafrost hydrology, Thermokarst, Cryogenic processes, Maps, Charts, USSR—Komi ASSR, USSR—Nenets National District.
- 33-2413  
One-dimensional model for geothermal problems. Goodrich, L.E., National Research Council, Canada. Division of Building Research. Technical paper, June 1974, No.421, 22p., In English with French summary. 27 refs.  
Latent heat, Phase transformations, Mathematical models, Geothermy.
- 33-2414  
Some unusual alkali-expansive aggregates. Gillott, J.E., et al. Engineering geology, 1973, Vol.7, p.181-195, In English with French summary. 19 refs. Swenson, E.G.  
Engineering geology, Concrete aggregates, Concrete durability, Freeze thaw cycles.
- 33-2415  
Sediment transport studies in Norwegian glacier streams, 1977. Kjeldsen, O., ed. Norway. Vassdrags- og elektrisitetsvesenet. Hydrologiske avdeling. Rapport, Oct. 1978, No.4-78, 71p., In Norwegian with extended English summary. 24 refs. Ekman, S.R., Kjeldsen, O., Olsen, H.C., Østrem, G.  
Glacial rivers, Suspended sediments, Sediment transport, Norway.
- 33-2416  
Glaciological research in Norway, 1977. (Glasiologiske undersøkelser i Norge 1977). Wold, B., ed. Norway. Vassdrags- og elektrisitetsvesenet. Hydrologiske avdeling. Rapport, Aug. 1978, No.3-78, 54p., In Norwegian with extended English summary. 30 refs. Haakensen, N., ed.  
Glacier mass balance, Glacial hydrology, Meteorological data, Norway.
- 33-2417  
Permafrost investigations in Quebec and Newfoundland (Labrador). (Études du pergélisol au Québec et à Terre-neuve (Labrador)). Brown, R.J.E., National Research Council, Canada. Division of Building Research. Technical bulletin, Sep. 1976, No.449, c50 leaves, In French with French and English summaries. 53 refs.  
Permafrost distribution, Climatic factors, Discontinuous permafrost, Terrain analysis.
- 33-2418  
Frost action and foundations. Burn, K.N., Canadian building digest, Nov. 1976, CBD 182, 4p., 3 refs.  
Frost heave, Soil freezing, Foundations.
- 33-2419  
Ground temperatures. Williams, G.P., et al. Canadian building digest, July 1976, CBD 180, 4p., 6 refs. Gold, L.W.  
Soil temperature, Solar radiation, Air temperature, Snow cover effect.
- 33-2420  
Adfreezing and frost heaving of foundations. Penner, E., et al. Canadian building digest, Aug. 1970, CBD 128, 4p. Burn, K.N.  
Frost penetration, Frost heave, Foundations, Thermal insulation.
- 33-2421  
Data on the principles of the study of frozen zones in the earth's crust. Issue 2. Meister, L.A., ed. National Research Council, Canada. Technical translation, 1962, TT-1006, 75p., For Russian original see SIP 13727 through 13735. For individual papers see 33-2422 through 33-2430.  
Fossil ice, Permafrost distribution, Thermokarst, Soil moisture migration, Active layer, Frozen ground physics, Thaw depth, Frost penetration.
- 33-2422  
Origin and development of massive fossil ice. Popov, A.I., National Research Council, Canada. Technical translation, 1962, TT-1006, p.5-24, 22 refs. Fossil ice, Ground ice, Ice wedges, Ice formation, Patterned ground.
- 33-2423  
Is the development of thermokarst always indicative of a recession of the permafrost table. Kachurin, S.P., National Research Council, Canada. Technical translation, 1962, TT-1006, p.25-32, 11 refs. Permafrost depth, Thermokarst development, Soil temperature, Thermal regime, Vegetation.
- 33-2424  
Concerning M.N. Gol'dshtein's hypothesis on the redistribution of moisture and ice segregation in frozen soil. Bakulin, F.G., National Research Council, Canada. Technical translation, 1962, TT-1006, p.33-36, 13 refs. Soil moisture migration, Frozen ground mechanics, Frost heave, Theories.
- 33-2425  
Southern boundary of the range of perennally frozen soils. Baranov, I.I.A., National Research Council, Canada. Technical translation, 1962, TT-1006, p.37-43, 5 refs. Permafrost distribution, Seasonal freeze thaw, Soil temperature, Discontinuous permafrost, Perelotoks.
- 33-2426  
On the idea of an "active layer" in areas of perennally frozen soils. Khomichevskaya, L.S., National Research Council, Canada. Technical translation, 1962, TT-1006, p.44-51, 9 refs. Frozen ground mechanics, Active layer, Seasonal freeze thaw, Soil temperature, Thermal regime.
- 33-2427  
Definition of the terms "moisture content" and "ice content" of frozen ground. Bakulin, F.G., National Research Council, Canada. Technical translation, 1962, TT-1006, p.52-56, 11 refs. Frozen ground physics, Moisture content, Ground ice, Terminology.
- 33-2428  
Certain concepts in the science of permafrost. Sidenko, F.D., National Research Council, Canada. Technical translation, 1962, TT-1006, p.57-58, 2 refs. Permafrost, Terminology.
- 33-2429  
On the shortcomings in the classification of ground water in regions of perennally frozen soil. Meister, L.A., National Research Council, Canada. Technical translation, 1962, TT-1006, p.59-64, 4 refs. Ground water, Permafrost hydrology, Ground ice, Hydrogeology, Terminology.
- 33-2430  
Use of the "reduced coefficient of thermal capacity" in computing the depth of the freezing and thawing of soils. Volkovskii, K.F., National Research Council, Canada. Technical translation, 1962, TT-1006, p.65-75, 3 refs. Frost penetration, Thaw depth, Heat transfer, Analysis (mathematics).
- 33-2431  
Proceedings of the International Meeting on Snow and Avalanches, 1978. (Comptes rendus). Rencontre internationale sur la neige et les avalanches, 2d, Grenoble, France, April 12-13, 1978, Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, 355p., In English and French with French and English summaries. Refs. passim. For individual papers see 33-2432 through 33-2465.  
Snow surveys, Snow hydrology, Avalanche triggering, Avalanche countermeasures, Snow cover distribution, Safety, Protection, Accidents.
- 33-2432  
Optimal avalanche-protection—safety expectations on various permanent and temporary measures. Aulitzky, H., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.9-15, 20 refs. Includes discussion in French.  
Avalanche countermeasures, Protection, Research projects.
- 33-2433  
State of avalanche protection in Bavaria. (Etat de la protection contre les avalanches en Bavière). Seyberth, M., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.17-22, In French.  
Avalanche countermeasures, Protection, Meteorological data, Statistical data.

- 33-2434**  
Avalanche observations in Austria and their consequences for avalanche research and control. Kronfellner-Kraus, G., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.23-35, In English with French summary.
- Merwald, I.  
Avalanche countermeasures, Avalanche formation, Trees (plants), Damage, Observation, Protection, Revegetation, Research projects.
- 33-2435**  
Avalanche control structures and avalanche hazard zone maps in Austria and the Tyrol. Hanaušek, E., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.37-41, In English with French summary.
- Avalanche countermeasures, Protection, Roads, Trees (plants), Revegetation, Maps.
- 33-2436**  
Temperature-gradient and equilibrium-temperature metamorphism of dry snow. Perla, R., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.43-48, In English with French summary. 4 refs.
- Metamorphism (snow), Ice crystal growth, Ice temperature, Surface energy, Vapor pressure, Snow recrystallization, Analysis (mathematics).
- 33-2437**  
Snow depth measurement with ultrasound. (Mesure de la hauteur de neige par ultrasons). Marbouty, D., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.49-59, In French with English and German summaries.
- Pougatch, B.  
Snow depth, Wind factors, Measuring instruments, Sounding, Ultrasonic tests, Thermal effects, Meteorological data, Precipitation (meteorology).
- 33-2438**  
On the calculation of the dielectric constant of snow. Denoth, A., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.61-70, In English with French summary. 11 refs.
- Snow dielectrics, Snow water content, Ice crystal structure, Analysis (mathematics).
- 33-2439**  
Glide mechanism of a snow cover on a slope covered with dwarf bamboo bushes. Endo, Y., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.71-80, In English with French summary. 6 refs.
- Akitaya, E.  
Avalanche countermeasures, Avalanche mechanics, Snow cover stability, Slopes, Vegetation factors, Topographic factors, Snow accumulation.
- 33-2440**  
Variation of stable isotopes in an Alpine snow cover and their application to hydrologic studies. (Variations d'isotopes stables dans une couche de neige alpine et leur application aux études hydrologiques). Herrmann, A., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.81-91, In French with English summary. 10 refs. Includes discussion.
- Stichler, W.  
Snow hydrology, Isotope analysis, Measuring instruments, Runoff, Moisture transfer.
- 33-2441**  
On the evaluation of drainage experiments using wet snow. Seidenbusch, W., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.93-103, In English with German and French summaries. 4 refs.
- Denoth, A.  
Wet snow, Snow hydrology, Snow water content, Snow permeability, Saturation, Meltwater, Drainage, Experimentation.
- 33-2442**  
Incremental rheological law of snow. (Loi rhéologique incrémentale de la neige). Navarre, J.P., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.105-113, In French with English summary.
- Desrués, F.  
Snow hydrology, Snow mechanics, Rheology, Snow plasticity, Snow elasticity, Flow measurement, Experimentation, Fluid dynamics.
- 33-2443**  
Laboratory and field determination of intrinsic strength curves of snow: classical and new methods. (Détermination in situ ou en laboratoire des courbes intrinsèques de la neige: méthodes classiques et nouvelle méthode). Montmollin, V., de, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.115-125, In French with English summary. 8 refs. Includes discussion.
- Snow strength, Shear strength, Snow mechanics, Measuring instruments, Experimentation.
- 33-2444**  
Development in electronics applicable to the rescue of avalanche victims and to snow, ice and avalanche measurement. (Les tendances en électronique en vue de sauvetage de victimes d'avalanches et pour les mesures de la neige, de la glace et des avalanches). Fritzsche, W., Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.127-136, In French with English and German summaries. 15 refs.
- Rescue equipment, Avalanches, Electronic equipment, Snow electrical properties, Ice electrical properties, Measuring instruments, Crevasse detection.
- 33-2445**  
Statistical analysis of precipitation in the French Alps. (Analyse statistique des précipitations sur les Alpes Françaises). Navarre, J.P., et al, Deuxième Rencontre internationale sur la neige et les avalanches, 12-13 et 14 avril 1978, Grenoble, France, Comptes rendus (International Meeting on Snow and Avalanches, Grenoble, France, April 12-13, 1978, Proceedings), Grenoble, France, Association nationale pour l'étude de la neige et des avalanches, p.137-149, In French with English summary. Includes discussion.

Polar icebreaker preliminary structural design and special studies. Dayton, R.B., Jr., Washington, D.C., U.S. Coast Guard, Office of Engineering, Aug. 1968, 175p. AD-845 560. Icebreakers, Structural analysis, Stresses, Sea ice, Ice loads.

The purpose of this document is to record and present the information and concepts that have been compiled and developed during the preliminary design of a 20,000 shp diesel electric icebreaker. This report deals with 2nd cycle preliminary structural design of a polar icebreaker for use in arctic and antarctic regions. It includes the development of dynamic ice loads, a critique on the possibility of fatigue failure, elastic vs plastic plate design and those structural analyses required to determine preliminary hull scantlings. (Auth.)

33-2476

Ice engineering—tensile properties of sea ice grown in a confined system. Dykins, J.E., U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Civil Engineering Laboratory. Technical report, July 1970, NCEL-TR-689, 55p., AD-874 807, 10 refs. Sea ice, Tensile properties, Ice mechanics, Structural analysis, Shear stress.

Increasing operational use of ice areas in arctic and antarctic regions has created a need for improved knowledge for utilization of polar ice for shore based activities and floating platforms. Tensile strength envelopes were developed for horizontally and vertically oriented specimens of saline ice. The salinity, density, and petrographic structure of the 7- to 9-ppt salinity natural seawater ice, which was grown in the laboratory, are closely identifiable with the characteristics of sea ice formed in a natural environment. This observation was based on comparison of the upper 44 cm of laboratory ice with a similar thickness of natural sea ice. The tensile strength was found to be a nonlinear function of temperature; there were strong implications, however, that a linear relationship with salinity may exist. The strength was found to be dependent on orientation of the stress field with both the grain (crystal) and subgrain (platelet) structure. Limited study indicates that the tensile strength of saline ice is appreciably reduced as stress rates increase above 25 psi/sec. (Auth.)

Selected bibliography of disturbance and restoration of soils and vegetation in permafrost regions of the USSR (1970-1977).  
Andrews, M., *U.S. Army Cold Regions Research and Engineering Laboratory*, Oct. 1978, SR 78-19, 175p. ADA-062 339.  
Bibliographies, Human factors, Environmental impact, Continuous permafrost, Discontinuous permafrost, Revegetation, Cryogenic soils, Damage.  
This compilation of literature, published in Russian since 1970, comprises 1225 bibliographic citations relating to disturbance and restoration of soils and vegetation. Sixty-five percent of these were found by a manual search of CRREL Bibliography Vols. 25-32; the others were obtained through off-line searches from the relevant computerized data bases and personal files. Only one of these data bases, that of the National Agricultural Library, is shown to be of significance in providing a valuable checking source. The literature is discussed in chronological fashion, with general statements followed by highlights of each year's contributions. The years 1972 and 1973 produced the most publications, and by 1976 there was a noticeable lag in pickup of publications by the indexing services. A trend is apparent from a reconnaissance and description approach in earlier papers toward an integrated ecosystem approach in more recent publications. Increased consciousness of the effects of disturbance on the permafrost environment, and the importance of restoration and preservation of these environments, are reflected in the recent literature, particularly in symposium proceedings.

Computer file for existing land application of wastewater systems: a user's guide.  
Iskandar, I.K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1978, SR 78-22, 24p., ADA-062 658, 4 refs.  
Robinson, D., Willcockson, W., Keefauver, E.  
Waste disposal, Water treatment, Computer programs.  
Two computer programs, both written in BASIC, have been developed to store and retrieve information on existing wastewater land treatment systems. The purpose of establishing these programs is to provide assistance to design engineers during the planning of new land treatment systems by making available the design criteria and performance characteristics of operating systems. The SEARCH program is designed to locate systems with specific design parameters, such as flow rate, waste type, application rate and mode, ground cover and length of operation. The PRINTOUT program includes a list of articles on similar systems in addition to the design parameters. The UPDATE program is used for the revision of information on file. Currently, there are about 350 domestic and 75 foreign systems on file.

Larson, R.E., Clapp, C.E., Linden, D.R., Larson, W.E.  
Waste disposal, Water treatment, Waste treatment, Irrigation, Land reclamation.  
A research system was designed and installed at the Apple Valley Wastewater Treatment Plant, two miles south of Rosemount, Minnesota, to develop agricultural management practices for removal of nitrogen from municipal wastewater effluent. A solid set irrigation system was designed and installed to apply wastewater effluent to 12 test blocks, each measuring 60 x 150 ft. A perforated plastic drainage tile was placed lengthwise in each block at a depth equivalent to the normal water table level and opening at one end of the block into a sampling station. Six blocks were planted to corn and six planted to eight species of forages. The effluent was applied at rates up to 15 ft/yr. This report presents the engineering considerations in the design of a solid set irrigation system and drain tile and monitoring system for evaluating the influence of the effluent application and agronomic practices on drainage waters.

Increasing the effectiveness of soil compaction at below-freezing temperatures.  
Haas, W.M., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1978, SR 78-25, 58p., ADA-062 875, 57 refs.  
Alkire, B.D., Kaderabek, T.J.  
Soil compaction, Frozen ground compression, Compressive strength, Soil water, Chemical reactions.  
This report presents data from an experimental program undertaken to determine the effect of low temperatures on the compaction characteristics of a silty sand. The effects of compactive effort and chemical additives were also investigated to determine possible methods of improving the densities of soils placed and compacted at low temperatures. A single soil type was used throughout the test program, and test results were obtained using Standard and Modified AASHTO compactive efforts on an untreated soil prepared and tested at temperatures of 20°C and -7°C. Additional test series, using the same compactive efforts and temperatures, were performed on the soil after it had been treated with an additive. The amounts of additive used, based on the dry weight of soil, were 3, 2, 1, 0.5, and 0.25% of calcium chloride and 0.5% of sodium chloride. From the results of the experimental program, several important conclusions concerning the effect of low temperature compaction were drawn.

Waste disposal, Water treatment, Stabilization, Ponds, Linings, Sealing, Seepage.  
A review of the literature on wastewater stabilization lagoon linings, covering the work during the past 20 years, is presented. Design, operating and maintenance experiences are presented for soil sealants, natural sealants, bentonite clays, chemical treatments, gunite, concrete, asphaltic compounds, plastics and elastomers. The characteristics of various materials, applicability to different wastes, construction techniques and details of installation techniques are presented. Installation costs for various materials and comparative costs are summarized. A summary of reported seepage rates for various types of lining materials is presented. A survey of the 50 states was conducted to determine the requirements for liners and allowable seepage rates. Requirements are varied and depend upon the local soil conditions and the experiences of the regulatory agencies with various materials. The trend is toward more stringent requirements. Accepted design and installation procedures are summarized, and detailed drawings of installation techniques are presented. Recommendations of the manufacturers and installers of liners are also presented.

Summary of Corps of Engineers research on roof moisture detection and the thermal resistance of wet insulation.  
Tobiasson, W., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec. 1978, SR 78-29, 6p., ADA-063 144, 12 refs.  
Korhonen, C.  
Roofs, Moisture transfer, Detection, Infrared spectroscopy.  
Nuclear, infrared, capacitance, microwave and impulse radar methods for nondestructively detecting moisture in roofs were evaluated. No system was reliable enough by itself or by cross-checking with another system to eliminate the need for a few core samples of membrane and insulation to verify findings. Airborne infrared surveys are a cost-effective way of reconfirming numerous roofs at a major installation. However, follow-up on the roof surveys are necessary. Of the several grid techniques examined, nuclear surveys were the most reliable. Hand-held infrared surveys are the most accurate on-the-roof method studied. Although an infrared camera costs significantly more than a nuclear meter (\$27,000 vs \$3,000), infrared surveys can be conducted more rapidly. Where numerous roofs are to be surveyed, infrared surveys appear to be the most cost-effective method. *In-situ* measurements have been made of the thermal resistance of wet and dry portions of roofs. A laboratory apparatus has been built to subject 12 in x 12 in specimens of roof insulation to combined thermal and moisture gradients. Thermal resistance and moisture content are periodically determined, and characteristic curves are being developed for various roof insulations.

Ice fog suppression using reinforced thin chemical films.  
McFadden, T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Nov. 1978, SR 78-26, 23p., ADA-063 107, 20 refs.  
Collins, C.M.  
Ice fog, Fog dispersal, Chemical ice prevention.  
Ice fog suppression experiments on the Fort Wainwright Power Plant cooling pond were conducted during the winters of 1974-76. Baseline information studies occupied a sizable portion of the available ice fog weather in 1974-75. Then hexadecanol was added to the pond and dramatically improved visibility by reducing fog generated from water vapor released by the pond at -14°C. Although this temperature was not low enough to create ice fog, the cold vapor fog created was equally as devastating to visibility in the vicinity of the pond. During the winter of 1975-76, suppression tests were continued, using films of hexadecanol, mixtures of hexadecanol and octadecanol, and ethylene glycol monobutyl ether (EGME). Suppression effectiveness at colder temperatures was studied and limits to the techniques were probed. A reinforcing grid was constructed that prevented breakup of the film by wind and water currents. Lifetime tests indicated the EGME degrades much more slowly than either hexadecanol or the hexadecanol-octadecanol mix. The films were found to be very effective fog reducers at warmer temperatures but still allowed 20% to 40% of normal evaporation to occur. The vapor thus produced was sufficient to create some ice fog at lower temperatures, but this ice fog occurred less frequently and was more quickly dispersed than the thick fog that was present before application of the films.

Melting of ice in sea water: a primitive model with application to the antarctic ice shelf and icebergs.  
Gade, H.G., *Journal of physical oceanography*, Jan. 1979, 9(1), p.189-198, 17 refs.  
Sea ice, Ice shelves, Icebergs, Ice melting, Sea water, Ice models.  
Steady-state conditions are assumed to exist everywhere in the case of melting of the underside of an infinite slab of ice floating in sea water. Basic transfer equations for heat and salt are established, and solutions derived for the interior corresponding to given far field values of the temperature and salinity of the water. The solutions are discussed in the T-S diagram where the behavior is particularly simple. Determining parameters are the characteristic velocities  $k_d$  and  $k_h$ , where  $k_d$  and  $k_h$  are the molecular and turbulent diffusivities, respectively, of salt,  $d$  and  $h$ , the thicknesses of the corresponding laminar and turbulent layers. Also, the nonmelting/nonfreezing case is discussed and the determining parameter established. Application of the theory to the Ross Ice Shelf (Little America V) gives acceptable results. Analysis of the static stability of the melt water mixtures reveals that with ambient temperatures approaching 17°C, the stratification becomes unstable. Icebergs brought to tropical waters will cause melt water mixtures to intrude at subsurface levels. Finally, convection obtained in laboratory experiments with melting ice in sea water is reported to be in concordance with the theoretically derived stability criterion. (Auth.)

Role of lichens in antarctic ecosystems.  
Lindsay, D.C., *Bryologist*, Summer 1978, 81(2), p.268-276, 49 refs.  
Lichens, Ecosystems, Soil microbiology.  
Antarctic terrestrial ecosystems can be divided into two main series: those of continental Antarctica and those of the maritime Antarctic. Within the former series, plant communities exist as isolated groupings of plants growing under a severe continental polar-desert climate and appear to be similar to communities of the High Arctic (e.g. the interior plateau of Devon Island). Communities in the maritime Antarctic region are more diverse, with less severe environmental conditions, and show affinities with lichen communities occupying similar habitats in boreal-Arctic zones of the northern hemisphere. Roles played by lichens in the two series of ecosystems are influenced considerably by environmental conditions and in continental Antarctica are often completely subordinated to physical processes. Weathering of substrata, for instance, in continental Antarctica, consists of the operation of several physical processes with lichens playing an insignificant role. It is only in the more suitable habitats found in the maritime Antarctic that lichens are able to play their full role in the development and functioning of ecosystems. (Auth.)

Tunnelling in glacial materials in the British Isles.  
Bevan, O.M., et al, Symposium on the Engineering Behaviour of Glacial Materials, University of Birmingham, England, April 21-23, 1975. Proceedings, Birmingham, Midland Soil Mechanics and Foundation Engineering Society, 1978, p.212-220.  
Parkes, D.B.  
Glacial deposits, Tunneling (excavation), Soil mechanics.
- 33-2568**  
Full scale pile testing to failure to determine the effect of fissuring in stiff boulder clay in Cheshire.  
Al-Shaikh-Ali, M.M.H., Symposium on the Engineering Behaviour of Glacial Materials, University of Birmingham, England, April 21-23, 1975. Proceedings, Birmingham, Midland Soil Mechanics and Foundation Engineering Society, 1978, p.229-234, 4 refs.  
Glacial deposits, Cracks, Clays, Shear strength, Piles, Soil strength, Soil structure, Tests.
- 33-2569**  
Determination of time dependent heave characteristics of mixed glacial materials.  
Harrington, E.J., Symposium on the Engineering Behaviour of Glacial Materials, University of Birmingham, England, April 21-23, 1975. Proceedings, Birmingham, Midland Soil Mechanics and Foundation Engineering Society, 1978, p.235-238.  
Glacial deposits, Glacial till, Soil mechanics, Admixtures, Hydraulic structures, Earthwork, Time factor, Swelling, Sewage.
- 33-2570**  
Determination of *in situ* permeability using a down hole current meter.  
Binnie, C.J.A., Symposium on the Engineering Behaviour of Glacial Materials, University of Birmingham, England, April 21-23, 1975. Proceedings, Birmingham, Midland Soil Mechanics and Foundation Engineering Society, 1978, p.139-140.  
Glacial deposits, Permeability, Engineering geology, Measuring instruments.
- 33-2571**  
General geocryology. Papers prepared for the 3rd International Conference on Permafrost. (Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu).  
Mel'nikov, P.I., ed. Novosibirsk, Nauka, 1978, 257p. In Russian. For individual papers see 33-2572 through 33-2606. Refs. passim.  
Permafrost origin, Permafrost distribution, Permafrost structure, Permafrost thickness, Maps, Active layer, Soil air interface, Heat transfer, Heat balance, Ground ice, Ice formation, Permafrost hydrology, Naleds, Thermokarst.
- 33-2572**  
Regularities governing formation and distribution of permafrost in the northeast European USSR. (Zakonomernosti rasprostraneniia i formirovaniia kriolitovnykh Severo-Vostoka evropeiskoi chasti SSSR).  
Sukhodol'skii, S.E., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.5-14, In Russian. 9 refs.  
Permafrost origin, Permafrost distribution, Permafrost structure, Permafrost thickness, Active layer, Soil air interface, Heat transfer, USSR—Bol'shezemel'skaya Tundra, USSR—Malozemel'skaya Tundra.
- 33-2573**  
Geocryological conditions of the Kolyma Plain. (Geokriologicheskie uslovia Kolym'skoi nizmennosti).  
Kaplina, T.N., et al, Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.14-23, In Russian. 13 refs.  
Kuznetsova, I.L., Koreisha, M.M., Lakhtina, O.V. Cryogenic relief, Thermokarst, Permafrost structure, Permafrost hydrology, Ground ice, Ice veins, Snow cover distribution, Vegetation factors, Wind factors, USSR—Kolyma River.
- 33-2574**  
Regional peculiarities of perennial freezing of rocks in Central Siberia during the Quaternary Period. (Regional'nye osobennosti mnogoletnego promerzaniia gornykh porod Srednei Sibiri na protiazhenii chetvertichnogo perioda).  
Sheveleva, N.S., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.24-30, In Russian. 8 refs.  
Quaternary deposits, Cryogenic processes, Permafrost distribution, Permafrost structure, Ice veins, Ice wedges, Permafrost thickness, USSR—Vilyuy River, USSR—Yakutia.
- 33-2575**  
Permafrost thickness in Pay-Khoy. (Moshchnost' merzlot zony Pay-Khoia).  
Oberman, N.G., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.30-34, In Russian. 5 refs.  
Permafrost distribution, Frozen rock temperature, Permafrost thickness, Temperature measuring instruments, Thermal regime, Boreholes, USSR—Bol'shezemel'skaya Tundra.
- 33-2576**  
History of permafrost formation in the Val'karay Plains. (Istoriia formirovaniia mnogoletnemerzlykh porod Val'karskoi nizmennosti).  
Arkhangellov, A.A., et al, Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.35-38, In Russian. 3 refs.  
Kolesnikov, S.F., Pliakht, I.R., Fishkin, O.N. Permafrost origin, Permafrost distribution, Permafrost structure, Arctic vegetation, Tundra, Forest tundra, USSR—Chukotskiy Peninsula.
- 33-2577**  
Regularities governing the process of recent permafrost formation in northern West Siberia. (Zakonomernosti protsessa sovremennogo obrazovaniia mnogoletnemerzlykh porod na severe Zapadnoi Sibiri).  
Kritskii, L.N., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.38-50, In Russian. 10 refs.  
Discontinuous permafrost, Permafrost origin, Active layer, Climatic changes, Snow cover effect, Vegetation factors.
- 33-2578**  
Seasonally frozen rocks and the problem of their investigation. (Sezonomerzlye gornye porod i problema ikh izucheniia).  
Vtiurina, E.A., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.50-56, In Russian. 5 refs.  
Frozen ground, Seasonal freeze thaw, Permafrost, Active layer, Classifications, Terminology.
- 33-2579**  
Ice formation in the seasonally thawing layer (field observations at the Ust'-Yenisey research station). (K voprosu o l'dovydenii v sezonnotatom sloe (po naturnym nabludeniiam na Ust'-Yeniseiskoi stantsii)).  
Lagov, P.A., et al, Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.56-59, In Russian. 4 refs.  
Parmuzina, O.I.U.  
Frozen fines, Clay soils, Active layer, Frost penetration, Ice formation.

33-2580

Generalized scheme for the classification of cryogenic structures of fine-grained deposits. (Obobshchennaya skhema klassifikatsii kriogennykh tekstur dispersnykh otlozheniy). Maksimova, L.N., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.60-69, In Russian. 13 refs.

Frozen fines, Cryogenic structures, Classifications.

33-2581

Temperature regime as a factor in the formation of cryogenic structure of perennially frozen rocks. (Temperaturnyi rezhim kak faktor formirovaniya kriogennoy stroeniya merzlykh porod). Tumel', N.V., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.70-77, In Russian.

Shpolianskaia, N.A.

Forest tundra, Permafrost structure, Cryogenic processes, Thermal regime, Frozen rock temperature, Heat balance, Tundra.

33-2582

Types of ice-bearing loess and fine-grained material in the permafrost zone. (O tipakh konstrativnogo alluvia oblasti mnogoletnemerzlykh porod). Kaplina, T.N., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.77-87, In Russian. 19 refs.

Alluvium, Loess, Frozen fines, Ground ice, Cryogenic processes, Permafrost structure, Ice veins, USSR—Yakutia.

33-2583

Cryogenic structure of mantle deposits in the Anabar-Olenok Plateau. (O kriogenom stroenii pokrovykh obrazovaniy Anabaro-Olenokskogo plato). Kunitskii, V.V., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.87-95, In Russian. 12 refs.

Alluvium, Glacial deposits, Frozen fines, Frozen gravel, Cryogenic structures.

33-2584

Studying microstructures of frozen rocks (methods, results, prospects). (Issledovanie mikrostroeniya merzlykh porod (metody, rezul'taty, perspektivy)). Rogov, V.V., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.95-98, In Russian. 9 refs.

Frozen fines, Microstructure, Permafrost samplers, Microscope slides, Electronic equipment, Cold chambers, Laboratory techniques.

33-2585

Influence of the base-layer of ground on formation of the contacting bottom-layer of ice. (Vliyanie gruntovogo osnovaniya na formirovaniye prikontaktnogo sloia l'da).

Solomatin, V.I., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.98-101, In Russian.

Kriuchkov, M.V., Kabanova, T.N. Ground ice, Ice formation, Ice models, Soil freezing, Ice growth.

33-2586

Sheet ice as an indication of Pleistocene glaciation conditions in northern West Siberia. (Plastovye l'dy kak pokazatel' usloviy pleistotsenovykh oledeneni' severa Zapadnoi Sibiri). Solomatin, V.I., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.102-112, In Russian. 12 refs.

Permafrost structure, Ground ice, Ice sheets, Ice formation, Ice structure, Ice deformation, Ice composition, Ice crystal structure.

33-2587

Improving the techniques of drilling and sampling frozen rocks and ice. (Sovershenstvovanie tekhnologii bureniya i otbora prob v merzlykh porodakh i l'dakh). Kudriashov, B.B., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.112-123, In Russian. 9 refs.

Chistiakov, V.K.

Permafrost structure, Ground ice, Drilling, Permafrost samplers, Boreholes, Ice sampling, Thermal regime.

33-2588

Thermokarst as a process in historical geology. (Termokarst kak istoriko-geologicheskii protsess). Katasonov, E.M., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.124-131, In Russian. 15 refs.

Thermokarst, Ground ice, Ice melting, Active layer, Cryogenic relief, Origin, Ice veins, Thermokarst lakes, Terminology.

33-2589

Systems approach to the study of thermokarst. (K izucheniiu termokarsta na osnove sistemnogo podkhoda). Shur, I.U.L., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.131-141, In Russian. 31 refs.

Thermokarst, Permafrost hydrology, Thermokarst lakes, Ice veins, Ice melting, Polygonal topography, Systems analysis.

33-2590

Post-cryogenic solifluction on inclines and shore slopes. (Postkriogennye splyvy-gruntov na sklonakh i beregovykh otkosakh). Zhigarev, L.A., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.141-151, In Russian. 13 refs.

Cryogenic processes, Slope processes, Solifluction, Mudflows, Soil moisture, Frozen fines, Ground thawing, Terminology.

33-2591

Naleds in the periglacial zone of East Siberian mountains. (Naledi prilednikovoi zony gor Vostochnoi Sibiri). Sheinkman, V.S., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.151-156, In Russian. 10 refs.

Nekrasov, I.A. Glacial hydrology, Naleds, Origin, Mountain glaciers, Glacier oscillation, Periglacial processes.

33-2592

Probability approach to frost fracturing. (Veroyatnostnyi podkhod k obrazovaniyu morozobolnykh treshchin).

Podbornyi, E.E., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.156-161, In Russian. 15 refs.

Soil freezing, Frost penetration, Frost shattering, Ground ice, Ice veins, Snow cover effect, Statistical analysis.

33-2593

Underground drainage in different cryohydrogeological structures of East Siberia. (Osobennosti podzemnogo stoka v razlichnykh kriogidrogeologicheskikh strukturakh Vostochnoi Sibiri). Afanasenko, V.E., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.161-165, In Russian. 4 refs.

Permafrost distribution, Water supply, Water reserves, Permafrost hydrology, Water chemistry, Suprapermafrost ground water, Subpermafrost ground water, Taliks.

33-2594

Formation of ground water reserves in the cryolithosphere, related to vertical zonality of water balance elements in mountains. (O nekotorykh osobennostyakh formirovaniya zapasov podzemnykh vod kriolitofery, obuslovlennykh vertikal'noi zonal'nost'iu elementov vodnogo balansa v usloviakh gornogo rel'efa).

Zinchenko, A.I., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.165-170, In Russian. 6 refs.

Mel'nikova, T.V., Motrich, L.T., Papernov, I.M. Permafrost hydrology, Water reserves, Suprapermafrost ground water, Subpermafrost ground water, Frozen rock temperature, Permafrost thermal properties, Water balance.

33-2595

Peculiarities of talik development beneath lakes in the West Siberian Plain. (Osobennosti razvitiya podozernykh talikov Zapadno-Sibirskoi nizmennosti). Uvarin, I.U.T., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.171-175, In Russian. 3 refs.

Shamanova, I.I. Permafrost hydrology, Taliks, Thermokarst, Permafrost structure, Ground ice, Forest tundra, Lakes, Permafrost beneath lakes.

33-2596

Experience in producing artificial taliks for water supply. (Opyt sozdaniya iskusstvennogo talika dlia vodosnabzheniya). Gol'dtman, V.G., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.175-186, In Russian. 5 refs.

Motrich, L.T. Water supply, Permafrost hydrology, Taliks, Artificial melting, Ground ice.

33-2597

Applying systems analysis to permafrost forecasting in engineering and geological investigations. (Mnogoletnemerzlye skal'nye porody kak ob'ekt sistemnogo prognozirovaniya pri inzhenerno-geologicheskikh issledovaniyakh).

Kagan, A.A., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.186-197, In Russian. 16 refs.

Krivosnogo, N.F. Engineering geology, Permafrost structure, Permafrost forecasting, Permafrost distribution, Permafrost hydrology, Frozen rock temperature, Ground ice, Ice formation, Systems analysis.

33-2598

Ecologic conditions of natural and disturbed land in the cryolithozone of West Siberia. (Ekologicheskie uslovia estestvennykh i narushennykh territorii kriolitofony Zapadnoi Sibiri). Moskalenko, N.G., et al., Obshchee merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (General geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1978, p.197-204, In Russian. 6 refs.

Snow composition, Aerosols, Atmospheric composition, Chemical composition.  
The results of the variations of the concentrations of 12 elements, including Pb, Cd, Cu, Zn and Ag in snow deposited from 1914 to 1974 at an uncontaminated site in East Antarctica, are discussed here. As the composition of snow in central Antarctica is shown to be closely correlated to that in the lower atmosphere, this provides a valuable historical record of the composition of remote aerosols in the Southern Hemisphere. It is found that Pb, Cd, Cu, Zn and Ag were already strongly enriched 60 yr ago (with respect to the composition of reference crustal and marine sources), and that both the concentrations and the enrichment factors observed in 1914 for these five elements are comparable to the present ones. This suggests that the present background atmospheric concentrations of Pb, Cd, Cu, Zn and Ag in the Southern Hemisphere are not strongly influenced by global pollution, but are related to natural phenomena, possibly volcanism.

Polar icebreaker cruise report, Operation Deep Freeze '79.  
U.S. Coast Guard, Seattle, Washington, Mar. 8, 1979, Var. p.  
Ice navigation, Ice breaking, Ships.  
This cruise report presents details of operations aboard the USCGC icebreaker *Polar Star* in support of *Deep Freeze '79*. The main tasks of the cruise were to break open the channel to McMurdo Sound and provide science logistics support. Other tasks included conduct training and gathering engineering data. The following events are described: ship and air operations, navigation, communications and postal affairs, science activities, engineering aspects, administration, supply and logistics, medical practices, and public relations. Assigned personnel and recommendations for future cruises are listed.

This paper traces the history of the British Antarctic Survey and describes its bases and support vessels, organization, administration, and scientific research activities. The Survey maintains permanent bases at South Georgia, Signy I., Argentine Is., Rothera Point, and Halley Bay. Another small base at Darnley Point, Wiencke I. serves as an air facility and transit point. Logistics and research support are provided by the vessels John Biscoe and Bransfield, and two ski-wheeled Twin-Otter aircraft. The Survey's staff numbers about 360. Research activities include programs in the atmospheric sciences, geology, geophysics, glaciology, biology, and physiology.

Firn, Glacier ice, Ice composition, Isotopes, Impurities, Antarctica—Plateau Station.  
Mineral impurities can originate from four main sources: the ocean, the lithosphere, extra-terrestrial space and man's activities. Whatever the particular objective envisaged, besides analytical problems, any research in this field faces a common general problem: determination of the relative contributions from each source. This paper discusses chemical and isotopic methods which will give a solution to this problem. The main difficulty lies in the large chemical fractionations which appear to take place at all stages of the passage between the source and the place of deposition. Two cases of definite identification of the origin are presented: evaluation of the extraterrestrial component in firn samples from Plateau Station (East Antarctica) based on the measurement of Mn-53, and the identification of a man-made component in the Pb found in an alpine glacier, based on the relative abundance of the stable isotopes of Pb. (Auth.)

Research projects, Plants (botany), Tundra vegetation, Trees (plants).  
A 15-day visit to Alaska by a Soviet botanist is reported. The 1975 visit was part of the US-USSR exchange on environmental protection and included stops at Palmer, Cantwell, and the University of Alaska in Fairbanks, McKinley Park, Barrow, Bettles, the Seward Peninsula, and several small villages. An account of the main vegetation types of Alaska and comparisons and contrasts with the Soviet tundra and taiga vegetation are given.

Sea ice, Ice conditions, Drift.  
With data available on the sea ice area at specific times and on the area of ice entering the sea, and removed from it in the interval between these moments, it is not hard to determine the dimensions of the area of ice formed or melted during the same period. Here the term "ice area" means the area of the sea occupied by ice with an undetermined density greater than one. If there are sufficiently great numbers of these estimated areas, then, having established the relationship between them and the hydrometeorological factors governing them, it is possible to estimate the sea ice area from its component elements. In this study this method of estimating ice area is applied to the entire region of East Greenland ice south of 80N.

Reservoirs, Thermal regime, Flow rate, Water flow, Heat transfer, Ice temperature.  
The present book considers laws governing the creation and variation of thermal conditions in large river storage basins at different seasons of the year. Heat exchange between the water masses and the surrounding space, as well as heat transport in an aquatic medium, are studied, and the effect of the size of the reservoirs and rate of water flow on water temperature is investigated. The theory of the thermal conditions of inland bodies of water is introduced, and methods and formulas for computing the water temperature in reservoirs is made. Many examples using material drawn from studies of the thermal conditions of reservoirs are presented.

Interpreting the results of temperature gradient measurements in the bottom layer of water in Lake Bol'shoie Toko.  
Efimov, A.V., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, TL 693, 15p., ADB-033 479, For Russian original see 32-343. 5 refs. Distribution limited to U.S. government agencies only.  
Temperature gradients, Probes, Thermal measurements, Ocean bottom.  
In view of the great labor consumption and high cost of drilling operations under sea conditions, a detailed study of the thermal regime of the shelf by the borehole methods appears to have low probability. The so-called marine geothermal studies can be used here. Their essence consists in measuring the temperature gradient by a thermal probe introduced into the first few meters of the bottom and separate determination of the coefficient of thermal conductivity of the ground. Thus it is possible to determine the surface thermal flux through the bottom of the body of water.

Microrelief of the bottom surface of drifting sea ice.  
Grishchenko, V.D., *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, TL 694, 6p., ADB-033 100, For Russian original see 31-1197. 2 refs. Distribution limited to U.S. Government agencies only.  
Ice bottom surface, Microrelief, Sea ice.  
Scuba divers on one of the North Pole drifting ice stations examined the bottom surfaces of annual and multi-year sea ice. The bottom of young and annual ice is smooth in the early spring. During summer melting, depressions form and grow on the bottom because of inclusions in the ice, meltwater pools on the top surface, and phytoplankton accumulations, all of which allow increased penetration of radiation. By early fall depressions may be 2-12 cm or more in diameter and 5-10 cm deep. During winter new ice growth fills in the depressions and the bottom surface becomes smooth again, although large irregularities may retain their shapes.

River ice, Ice navigation, Ice conditions, Ice breaking.  
This book summarizes experience operating river icebreakers and transports in ice. A classification of forms of river ice is given; and the behavior of ice in rivers and reservoirs is briefly described. The book describes river icebreakers and transports adapted to navigate in ice, reviews questions of preparation for ice navigation, and considers ways to guide icebreakers in different ice conditions and during the performance of certain icebreaking jobs. Recommendations are given for navigators sailing through ice on their own, and principles are set forth for the organization and execution of icebreaker pilotage.

Observations on vertical profiles of the snow cover on roofs and melt at the bottom of the snow cover.  
Nakamura, T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, TL 697, 19p., ADB-063 109, 4 refs. For Japanese original see 33-548.  
Abe, O.  
Snow loads, Roofs, Snow melting.  
Observations on vertical profiles of the snow cover on nearly flat roofs of three different buildings were made, and the observational results were compared with that of the snow cover on the ground. Comparison of these four results revealed that the layered structure of the snow cover on flat roofs is similar to the upper part of the snow cover on the ground, and a granular snow layer was observed at the bottom of each snow cover. This means that each snow cover melts at the bottom due to the heat flow either through the ceilings of the buildings or through the ground surface.

Algae, Plankton, Sea ice, Photosynthesis, Cryobiology, Arctic Ocean.  
Microflora and conditions for photosynthesis in different layers of sea ice and undersea ice are described from the data in the literature. In spite of the sharp drop in light energy as the ice thickness increases, the upper layers are relatively poor in unicellular algae in comparison with the middle and lower layers. Ice flora are mainly pinnate and centric diatoms. Photosynthetic intensity is maximal in the upper and middle (solid) layers of ice. Primary production of solid sea ice in Antarctic coastal waters in the summer is comparable to the eutrophic and mesotrophic regions of the World Ocean. Algae in the lower (cellular) layer of ice and under sea ice phytoplankton, far removed from the edge of the ice, have a low light optimum of photosynthesis. Primary production of upper layers of undersea ice water depends greatly on the transparency and thickness of ice. (Auth.)

Snow composition, Ice sheets, Glacier ice, Geochemistry, Pollution, Aerosols, Human factors.  
Over 200 samples of snow from Antarctica, Greenland, and Devon Island have been analyzed for 12 elements. The methods of contamination-free sampling and analysis, developed after considerable experimentation, are described in detail. The background fallout rate for Central Antarctica and Greenland—assumed to be representative of the entire globe—does not appear to have been influenced significantly by human activity during the last century, except perhaps for Pb and Zn in the Northern Hemisphere. The origin of each element is determined by a statistical method refined by the introduction of space and time variables. Na, Mg, K, and Ca may be of both oceanic and continental origin; the other elements are always of continental origin, which is detrital in the case of Al, Fe, Mn, K, and Ca, and nondetrital for Pb, Cd, Cu, Zn, and Ag. Concentrations vary little with distance from the sea, except for Na, Mg, K, and Ca in Antarctica, which decrease rapidly for the first 100 km from the coast, then increase slightly toward the center of the continent. Concentrations show a fluctuation in time, but present values are comparable to those obtained at the beginning of this century.

- trails, a winter runway, excavations, pilings, remains of camp structures, steel drums and other solid waste, and hydrocarbon spills. The most intense and lasting disturbance to the vegetation, soils, and permafrost resulted from bulldozing of surface materials, diesel fuel spills, and trails developed by multiple passes of vehicles. Thermokarst subsidence and thermal erosion, caused by increased thaw of permafrost due to disturbance, resulted in the development of a hummocky topography and water-filled depressions at the drill site. Some ice wedges disturbed in 1949 are still melting. Soil disturbance ranges from minor modification to complete destruction of the soil morphology. The effects of hydrocarbon spills are still detectable in the soils. Little of the original vegetation remains in the intensely disturbed area, such as around the drill pad where a grass-dominated community prevails. After 28 years, the vegetation cover is closed over most mesic sites, shallow wet sites are well vegetated, and xeric sites, areas of diesel fuel spills and areas of severe erosion remain mostly bare. Pioneering plant species on bare, disturbed areas are members of mature vegetation assemblages from the undisturbed tundra which have high reproductive and dispersal capacities. A hypothetical model of natural revegetation and vegetation recovery is proposed. Vascular plants, bryophytes, and lichens were collected from the Fish Creek site area for the first time. Recommendations on cleanup and restoration of sites are presented.

Webber, P.J., Everett, K.R., Brown, J.  
Oil spills, Environmental impact, Tundra vegetation, Indexes (ratios), Maps.  
Crude oil was spilled on six of the major Prudhoe Bay plant communities at an intensity of 12 liters/sq m. The communities occurred along a topographic-moisture gradient. The reaction of the major species of the various communities was recorded one year following the spill. Sedges and willows showed substantial recovery from crude oil spills. Mosses, lichens, and most dicotyledons showed little or no recovery. On a very wet plot with standing water, the vegetation showed very poor recovery. *Dryas integrifolia* M. Vahl, the most important vascular species on dry sites, was killed. Identical experiments using diesel oil rather than crude oil showed all species except an aquatic moss to be killed. A sensitivity index for the communities was calculated on the basis of the percentage cover of the resistant species divided by the original total plant cover of the community. With this information an oil spill sensitivity map for an area of Prudhoe Bay was constructed using a vegetation map as a base. Using the crude oil data from Prudhoe Bay together with some from the literature, a predictive sensitivity map was also constructed for an accidental crude oil spill at nearby Franklin Bluffs. In this example all the community types are considered to have moderate to excellent recovery potential.

Oil spills, Tundra soils, Hydrocarbons, Microbiology.  
Prudhoe Bay crude oil and refined diesel fuel were applied to five topographically distinct tundra soils at Prudhoe Bay, Alaska. The penetration of hydrocarbons into the soil column depended on soil moisture and drainage characteristics. Biodegradation, shown by changes in the pristane to heptadecane and resolvable to total gas chromatographic area ratios, appeared to be greatly restricted in drier tundra soils during one year exposure. Some light hydrocarbons were recovered from soils one year after spillages. Hydrocarbons were still present in soils at Fish Creek, Alaska, contaminated by refined oil spillages 28 years earlier, attesting to the persistence of hydrocarbons in North Slope soils.

Ice cores, Firn, Depth hoar, Ice crystals, Boreholes, Antarctica—Mizuho Station.  
This volume is an outgrowth of a joint program of ice core drilling at Mizuho Station in East Antarctica by the Japanese Antarctic Research Expedition (JARE) in 1971-1975 and collaborative research on ice analysis done at the drilling site and in home laboratories up to 1978. The volume contains 16 papers: one on drilling technology and operation, eight on the physical and chemical characteristics of retrieved cores, and 7 containing data from the core analysis and borehole logging. Core analysis is still in progress.

Ice coring drills, Thermal drills, Ice cores, Antarctica—Mizuho Station.  
Ice drillings were carried out in 1971, 1972 and 1974-75 at Mizuho Station as part of the Glaciological Research Program in Mizuho Plateau of the Japanese Antarctic Research Expedition. Four holes, 41.0 m, 75.0 m, 147.5 m and 145.4 m deep, were drilled and 350 m of cores from them were sent to Japan. The operation is chronologically outlined from the embryo stage of its planning, with emphasis placed on its technical aspects. (Auth.)

Kato, K., Satow, K., Okuhira, F.  
Firn stratification, Ice sheets, Ice cores, Snow accumulation, Ice composition, Oxygen isotopes, Snow density, Antarctica—Mizuho Station.  
Stratigraphy of the 150-m core from Mizuho Station is studied by visual observations as well as by analysis of density and oxygen isotope profiles. Stratigraphic structures are well preserved to a depth of 70 m. Considerably deviated values of density from the average depth-density curve serve as good indicators of the texture of initially deposited snow. From stratigraphic interpretation, about 10.6 g/sq cm is estimated as the mean annual accumulation. With this value the age of the lowermost part of the 150-m core is estimated to be some 1100 years B.P. excluding the periods of hiatus of annual layers. In the delta O-18 profile to the depth of 60 m, the smallest peak indicating the coldest climate is seen at a depth of 32 m which is dated back to some 2000 years B.P. Comparison of the delta O-18 profile in the Mizuho core with that in the Camp Century core indicates that the period of hiatus of annual layers is about one-third of the real duration of the core formation and the mean annual accumulation is about two-thirds of 10.6 g/sq cm at Mizuho Station in the past 300 years. Maeno, N., Nakawo, M.  
Firn, Ice cores, Ice crystal size, Ice structure, Structural analysis, Ice crystal structure, Antarctica—Mizuho Station.  
Sizes, shapes and c-axis orientations of crystal grains as well as specific areas of grain boundaries and internal free surfaces were measured for firn and ice core samples of 147.5 m length obtained in 1971 and 1972 at Mizuho Station, East Antarctica. Five critical depths were found at which some structural changes occurred. They were 8 m, 30 m, 55 m, 70 m and 110 m. Their corresponding densities were 550, 730, 840, 855 and 882 kg/cu m, respectively. The densities of 550 and 840 kg/cu m correspond to frequently reported figures at which the densification mechanism changes from mechanical packing of air voids to plastic deformation of ice grains, and from the plastic deformation to shrinkage of closed-off air bubbles. The critical density of 730 kg/cu m (30 m) was first pointed out by Maeno in 1974, who concluded that the bonding between ice grains reached its maximum or optimum state for packing at this density. The present analyses showed that air voids were gathered only at intersections of grain boundaries in the core samples at the critical density. The remaining two critical densities, 855 kg/cu m (70 m) and 882 kg/cu m (110 m), are related to alterations of mechanical stress fields; samples below 70 m contained layers of small grains intermittently, and at depths deeper than 110 m crystal sizes decreased, suggesting the presence of shear components. (Auth.)

Narita, H., Araoka, K.  
Snow elasticity, Snow mechanics, Firn, Antarctica—Mizuho Station.  
Air permeability and elastic modulus were measured for firn samples prepared from a 20-m pit and cores drilled to the depth of 147.5 m at Mizuho Station in East Antarctica. Air permeability decreased and elastic modulus increased with increasing depth or density. Two distinct changes were found to densities of 550 and 730 kg/cu m, i.e. at porosities of 0.40 and 0.20, in the plots of air permeability and elastic modulus against density or porosity. The former change is explained by the alteration of the densification mechanism from mechanical packing to plastic deformation of ice particles, and the latter by the attainment of an optimum configuration of ice bounding for air permeation and mechanical strength. Observed results are compared with the theoretical air permeability of an ideal snow, to which all polar snows are considered to approach in a long aging

period under high hydrostatic pressure and high homologous temperature. It is suggested that the optimum state, which is reached at the density of 730 kg/cu m or the porosity of 0.20, is that of snow in which air channels are mainly located at intersections of grain boundaries and some 30 percent of them are unblocked. **Electrical behaviors of antarctic ice drilled at Mizuho Station, East Antarctica.**

Maeno, N., Tokyo. *National Institute of Polar Research. Memoirs. Special issue, Dec. 1978, No.10, p.77-94, 25 refs.*

**Ice cores, Firn, Ice dielectrics, Ice electrical properties, Antarctica—Mizuho Station.**

The electrical properties of Antarctic firn and ice cores drilled at Mizuho Station to the depth of 145 m were studied in a wide range of frequency (0.1 Hz to 1 MHz) and temperature (0 to -50°C). Remarkable differences were found between the cores taken from depths shallower than 55 m and those from deeper parts. Dielectric properties of the cores above 55 m, corresponding to cores permeable to air flow and with densities less than 840 kg/cu m could be explained as those of heterogeneous mixture-dielectrics of ice and air, though the physical meaning of the activation energies for dielectric relaxation and high-frequency conduction were not clarified completely. Cores deeper than 55 m, corresponding to impermeable cores with densities higher than 840 kg/cu m, showed extremely large dielectric constants and conductivities. Based on the results of the present electrical measurements, the alteration of densification mechanisms was suggested to occur at a depth around 30 m corresponding to the density of 730 kg/cu m, where the bonding and compaction of composing ice particles were regarded to have reached their optimum mode, which was also confirmed by petrographic analyses of cores such as areas of internal free surfaces and grain boundaries.

**Stress-strain tests of ice core drilled at Mizuho Station, East Antarctica.**

Shoji, H., Tokyo. *National Institute of Polar Research. Memoirs. Special issue, Dec. 1978, No.10, p.95-101, 7 refs.*

**Ice cores, Ice mechanics, Strain tests, Stresses, Antarctica—Mizuho Station.**

The mechanical properties of an ice sample (No. 143) taken from 100 m depth at Mizuho Station were investigated with stress-strain tests in uniaxial compression at temperatures of -6 and -16°C. Strain rate employed in experiments ranged from 10,000,000 to 1,000,000/s. Stress-strain curves obtained are classified into two types: stress-yield type and stress-saturation type, according to the occurrence and non-occurrence of yield drop due to the internal cracking. The relationships between the maximum stress obtained from the curves and the strain rate (the stress dependence of the strain rate) thus obtained were compared with those for core samples taken at Byrd Station. It was found that the Mizuho core sample resembled Byrd core sample No.145 (300 m depth) in the mechanical property shown in the relationships stated above. Peculiarity in the property exhibited at -16°C experiments is interpreted by the generation of cracks during deformation of high strain rate. (Auth.)

**Internal friction of antarctic Mizuho ice cores at low frequency.**

Nakamura, T., et al, Tokyo. *National Institute of Polar Research. Memoirs. Special issue, Dec. 1978, No.10, p.102-113, 8 refs.*

**Ice cores, Shear modulus, Internal friction, Ice mechanics, Antarctica—Mizuho Station.**

Internal friction and shear modulus of Antarctic ice cores drilled at Mizuho Station were measured with an inverted torsion pendulum in a frequency range of 4 to 9 Hz and a temperature range of 96 to 272K. As a function of temperature, the measured internal friction of every core showed two peaks. One around 265K was considered due to the grain boundary and the other around 150K to the mechanical relaxation, because the internal friction of a single crystal has only one peak around 170K corresponding to the latter peak. The height of the former peak decreased with an increase in the density of the core. The shear modulus decreased very slowly with increase of temperature to around 253K, where internal friction begins to increase sharply. The decrease of shear modulus was rapid above that temperature. The shear modulus increased linearly with the density. (Auth.)

**Anisotropy of ultrasonic wave velocities in Mizuho cores.**

Yamada, T., Tokyo. *National Institute of Polar Research. Memoirs. Special issue, Dec. 1978, No.10, p.114-123, 13 refs.*

**Snow cover, Ice sheets, Depth hoar, Wave propagation, Anisotropy, Sound waves, Antarctica—Mizuho Station.**

The snow cover at Mizuho Station is characterized by well-developed depth hoar. To clarify how the anisotropy of elastic wave velocities changes with the densification process of the depth hoar having an anisotropic texture, the P- and the S-wave velocities were measured directly as a function of depth for both the vertical and the horizontal direction using the ultrasonic pulse method applied to deep core samples drilled to the depth of 145 m at Mizuho Station. As for the P-wave velocity, the

upper part of the ice sheet from the surface to the depth of 25-30 m (0.72-0.73 Mg/cu m density) was found to be anisotropic, while below that depth the ice sheet became isotropic. The curve of P-wave velocity versus density disclosed discontinuities at the densities of 0.65 and 0.84 Mg/cu m, which correspond to the depths of 10-16 and 55-60 m respectively. The facts indicate that the process of densification and metamorphism of snow and ice may change at these levels in the ice sheet at Mizuho Station. As for the S-wave velocity, the ice sheet was isotropic through all depths, whereas on the curve of S-wave velocity versus density only one discontinuity was clearly noticed, at the density of 0.65 Mg/cu m. **Ice sheets, Ice creep, Rheology, Shear stress, Heat flux, Heat transfer.**

Creep instability, the runaway increase of temperature and deformation due to internal strain heating, is analyzed with a very simple model of one-dimensional heat transfer to estimate the stability of the antarctic and Greenland ice sheets. Derived stability maps indicate that for the assumed rheology both ice sheets are completely stable; however, the stability of the coastal region of Wilkes Land in Antarctica is only marginal and cannot be accurately determined because of uncertainties in the data, especially basal shear stress. - 33-2889**  
Bentley, C.R. Ice shelves, Mass balance, Ice volume, Ice cover thickness, Antarctica—Ross Ice Shelf. Measurements of ice thickness, velocity, snow accumulation rates, and surface strain-rates are used to examine the state of equilibrium of three flow bands of the Ross Ice Shelf. The analysis gives the rate of thickening of the ice shelf in terms of the basal freezing rate, which is unknown. However, indirect evidence suggests that the basal flux ranges from a small value of freezing in the south to a melting rate of about one meter of ice per year at the ice front. If these values are correct, then the flow band in the south-east corner of the ice shelf appears to be thickening at an average value of (34) cm of ice per year. Persistent thickening at this rate must lead to grounding of large areas of the ice shelf. This would restrict drainage from west antarctic ice streams which feed this part of the ice shelf, and these would tend to thicken and advance their grounding lines into the ice shelf. Further north, near the RISP bore-hole site, the ice shelf is probably in equilibrium. The largest flow band is to the south and east of Roosevelt Island, and this also may be in equilibrium if there is significant bottom melting from ice shelf that is more than 100 km from the ice front. Kovacs, A., Mellor, M. Pressure ridges, Ice islands, Ice cover thickness, Profiles. The environmental conditions in the southern Beaufort Sea are described, with special emphasis on pressure ridges and ice islands. Techniques for determining the geometric configurations and the physical and mechanical properties of sea-ice structures and ice islands are described. Profiles of pressure ridges were determined by surface surveys, drill-hole probes and side-looking sonar scanning. Multi-year pressure ridges with thicknesses up to 20 m and widths up to 120 m were examined in detail. The first-year ridge of 22 m thickness and 100 m width was studied. Results are given for several multi-year and the first-year ridges. Information obtained from dives under the ice is also given. Corresponding data are given for grounded ice islands, with emphasis on contact between the ice and sea bed. A 20 m thick ice-island fragment grounded in 15 m of water was one of several investigated. Measurements of temperature, salinity, tensile strength, and compressive strength are given for ice taken from old pressure ridges; and factors influencing the interpretation of test data are discussed.

Numerical modelling of iceberg towing for water supplies—a case study. Job, J.G., *Journal of glaciology*, 1978, 20(84), p.533-542, In English with French and German summaries. 13 refs.
- 33-2891**  
Ice models, Ice melting, Ice deterioration, Ice (water storage), Water supply, Iceberg towing. The towing of unprotected icebergs from the antarctic continent (66S) to latitude 38S, has been simulated using an explicit hydrodynamic model and an extended two-dimensional melting model. It was found that nominal towing accelerations in excess of .00002 m/sec sq were required to deliver ice over this route in most circumstances, and minimum energy consumptions were obtained at accelerations around .0001 m/sec sq. Unprotected icebergs could be delivered with about 50% yield to latitude 38S, but the rate of deterioration in the warm waters indicates that protection would be required for longer journeys. The towing simulation was most sensitive to north-south current components, the total towing distance, and the rate of iceberg deterioration. Efforts directed towards locating suitable icebergs in the region of 50S to 60S, and towards increasing knowledge of the changing current patterns in the Southern Ocean would be most valuable, as would a knowledge of the mechanisms and rates of deterioration of icebergs in warm seas. Bituminous concretes, Seasonal freeze thaw, Frost resistance, Frost penetration, Subgrade preparation, Frost heave.  
Two full-depth pavement sections were built on highly frost-susceptible subgrades that had been properly prepared. Suitable structural and service performances were achieved in spite of substantial, though uniform, frost heaves. A full-depth pavement built on a local municipal street has not approached structural failure. However, poor service performance caused by differential heaves and severe differences at surface castings has resulted. This paper reports on these studies and attempts to underscore the importance of proper design and construction of pavements on highly frost-susceptible soils. Particular emphasis is placed on the quality of subgrade preparation. Finally, the importance of transition sections at surface castings is considered necessary to diminish differential heave at the castings.

Losev, K.S., Loseva, I.A.  
Mass balance, Ice sheets, Antarctica.  
The components of the water-ice budget of Antarctica are analyzed on the basis of available Soviet and foreign data. According to a newly constructed map, annual snow accumulation in Antarctica averages 15.6 g/sq cm, or 2,000 cu km of water. Several ice domes have been identified in East Antarctica proceeding from the stable relation between accumulation and absolute surface elevation. The computed ice losses (in cu km per year) are: 10 through glacial runoff, 0 for evaporation-condensation, 20 through snow removal by the wind, 50 through ice melting at the bedrock, 320 through bottom melting of ice shelves, and 2,000 through iceberg calving. The amount of precipitation falling over Antarctica exceeds by 1.5% its accumulation on the ice sheet. The low accuracy of individual components of the budget does not permit a categorical conclusion to be made regarding its sign. (Auth.)

Collins, C.M.  
Ice fog, Fog dispersal, Chemical reactions.  
Ice fog suppression experiments on the Fort Wainwright Power Plant cooling pond were conducted during the winter of 1974-76. Hexadecanol was added to the pond and dramatically improved visibility by reducing fog generated from water vapor released by the pond at -14C. Although this temperature was not low enough to create ice fog, the cold vapor fog created was

equally as devastating to visibility in the vicinity of the pond. During the winter of 1975-76, suppression tests were continued using films of hexadecanol, mixes of hexadecanol and octadecanol, and ethylene glycol monobutyl ether (EGME). Suppression effectiveness at colder temperatures was studied and limits to the techniques were probed. A reinforcing grid was constructed that prevented breakup of the film by wind and water currents. Lifetime tests indicated that EGME degrades much more slowly than either hexadecanol or the hexadecanol-octadecanol mix. All the films were found to be very effective fog reducers at warmer temperatures but still allowed 20% to 40% of normal evaporation to occur. The vapor thus produced was sufficient to create some ice fog at lower temperatures, but this ice fog occurred less frequently and was more quickly dispersed than the thick fog that was present before application of the films.

Patterns of communication and social interaction within a work organization are significantly influenced by architecture. Nearly all work organizations are dependent upon information flow, both informal and formal, between coworkers. As a rule, the more open and informal the communication, the more productively and efficiently the organization operates. The architectural design concept of focal points is presented as a strategy for planning the work facility for improved informal communication. Examples of energy-efficient building design schemes for cold regions are presented. These prototype buildings combine design for improved worker efficiency with thermal efficiency.

**Aerial photography, Glaciology.**

This publication is the first in a newly established series of publications from the National Oceanic and Atmospheric Administration's Environmental Data Service. Its purpose is to show in an easily understandable form the various types of

environmental data available from EDS. The inventory illustrates in graphic form the types and amounts of data available from EDS for specific geographic regions. For this issue the Antarctic was chosen. Future issues will cover the Arctic, Mediterranean Sea, and tropical oceans of the world (four areas in all).

**Climatonomical modeling of temperature response to dust contamination of antarctic snow surfaces.**

Lettau, H.H., *Boundary-layer meteorology*, 1977, No.12, p.213-229, 10 refs.

**Climate, Mathematical models, Albedo, Snow surface temperature, Heat transfer, Snow air interface, Antarctica—South Pole.**

Monthly averages of the surface energy balance are parameterized, resulting in a reduced solar forcing function and a nondimensional time scale for computing the thermal response at the air-snow interface by numerical forward integration. The climatonomical transform of the balance equation assesses surface-temperature perturbations resulting from parameter modifications that simulate effects of dust contamination of a snow surface. Three climatonomical model experiments permit these conclusions: 1) an albedo reduction increases primarily the summer temperatures; 2) an emissivity decrease raises the temperature of all months nearly uniformly; and 3) the thermally induced feedback on submedium structure (if summer melting is initiated) increases the storage capacity and reduces spring and summer temperatures with compensating rise in autumn and winter temperature. Quantitative results are exemplified by assumed modification of conditions that exist at the South Polar Plateau. (Auth.)

33-2982

**Sintering and compaction of snow containing liquid water.**

Colbeck, S.C., et al, *Philosophical magazine A*, Jan. 1978, 39(1), MP 1190, p.13-32, Refs. p.31-32.

**Snow compaction, Snow mechanics, Firnification, Ice density, Salinity, Meltwater, Wet snow.**

**Solid waste disposal by landspreading techniques.**

Durlak, E.R., *U.S. Naval Construction Battalion Center, Port Hueneme, Calif. Civil Engineering Laboratory. Technical note*, Feb. 1977, CEL-TN-1471, 74p.

**ADB-017 149. Waste disposal, Sludges, Land reclamation.**

Landspreading is the disposal of solid waste by mixing compostable materials into the topsoil so that the decomposition process remains aerobic. Some of the advantages for landspreading include minimum settling of the land, no formation of undesirable odors or leachates, a potential for the support of vegetation, continued usefulness of the land, restoration in a minimum amount of time, and improvement in soil texture and water retention. Construction industry rototillers were selected as the most likely candidates for successfully homogenizing solid waste into the topsoil to depths up to 20 inches. Three types of these machines in two types of soil were studied, as well as the agricultural, chemical, and biological aspects of the process.

Ice crystals, Ice composition, Ice physics, Meetings, Glaciology.  
A total of 58 papers based on ice crystal studies in the Antarctic were presented at the Symposium on Physics and Chemistry of Ice at Cambridge, England, Sep. 10-24, 1977. Studies carried out by the Soviet Union, U.S.A., Australia, Japan and England were concerned with ice crystal structure and its deformation due to temperature variations and pressure. The IAGP meeting took place with the participation of Australia, England, the Soviet Union, the United States and France. Reports of work done in 1976/77 and plans for future research were presented; the latter concerned routes for radio sounding of ice, locations for deep drilling, and traverses for general glaciological and geophysical surveys. Summaries of the papers are given.

Godelchik, A.V., Moiseeva, G.P.  
Iceberg towing, Marine transportation, Ice melting, Ice thermal properties, Water supply, Analysis (mathematics).  
Theoretical aspects of ice melting in water are considered. Experimental data, obtained on the Bolshoye Khadatskoye Lake (Polar Urals) and in the laboratory of the Institute of Geography (Moscow), along with available literature permitted to deduce a criterion equation and formula. Melting of an iceberg transported from Antarctica to Australia and Arabia was calculated on the basis of the formula. Calculations show that without special thermal protection the iceberg will be totally consumed by underwater melting.

33-3049

Some problems of photogrammetry in Antarctica.  
Dressler, K., *Jena review*, 1975, No.2, p.88-92, back cover, 10 refs.  
Photogrammetry, Stereophotography, Topographic features, Geodetic surveys, Glacier surfaces, Meteorological data, Measuring instruments.  
An aerophotogrammetric method used during the 17th Soviet Antarctic Expedition to determine topographic features of a traverse of 100 km length with side lengths of 3 to 5 km is described. Difficulties encountered because of frequent snowstorms, low air temperature, poor visibility and excessive albedo are discussed. About 140 stereomodels and 36 single photographs were taken from 25 bases in 76 directions, using a 191318 Phototheodolite. To reduce errors in aerophotogrammetry the following suggestion is made: the tracks of sledges are distinctly recognizable in the aerial photograph. If the caterpillar tractor moves around the geodetic fixed points in a circle, the tracks can serve as ground control points of maximum accuracy visible from the air. The photographic flight should be carried out as soon as possible after having finished this marking work.

Proceedings.  
Colloquium on Planetary Water and Polar Processes, 2nd, Oct. 1978, MP 1193, Hanover, N.H., U.S. Army Cold Regions Research and Engineering Laboratory, 1978, 209p., For selected papers see 33-3058 through 33-3080. Abstracts of many of the papers in this volume have been previously accessioned from the preliminary publication of this colloquium, Collection of Abstracts, and may be found as 33-1984 through 33-2001. Texts of question and answer sessions which followed presentations have been added to most of the abstracts duplicated in the Proceedings, volume. Meetings, Mars (planet), Planetary environments, Permafrost hydrology, Geologic structures, Water.

33-3058

Studies on terrestrial ice cores.  
Langway, C.C., Jr., Colloquium on Planetary Water and Polar Processes, 2nd, Oct. 1978. Proceedings, Hanover, N.H., U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.11-27., Refs. p.24-27.  
Ice sheets, Ice cores, Isotope analysis, Age determination.

The author reviews the progress achieved since about 1965 in retrieving and analyzing polar ice cores. Most of the studies concern Greenland cores but many of the citations include work done in Antarctica. Significant advances are recorded in the technology of retrieval as well as in the scope and detail of the analyses which include: chemistry, stratigraphy, physical properties, microparticles, and stable and radioactive isotopes. Results of the investigations over the years have had significant bearing on a substantial number of scientific disciplines.

33-3059

Development of a simplified method for field monitoring of soil moisture.  
Walsh, J.E., et al, MP 1194, Colloquium on Planetary Water and Polar Processes, 2nd, Oct. 1978. Proceedings, Hanover, N.H., U.S. Army Cold Regions Research and Engineering Laboratory, 1978, p.40-44, Includes comments. 3 refs.

Parker, B.C.

Ice sheets, Ice cores, Ion density (concentration), Antarctica—Amundsen-Scott Station.

The authors describe the results of chemical analyses made on an ice core from South Pole Station. Nitrate and ammonium ion levels are identified and traced from the 10th century to the early part of the 20th. The fluctuations in ionic level are related to solar activity and climatology during this 1000 yr period. Extending this type of sequential analysis to other planets or satellites having ice caps must take into account the composition and structure of their atmospheres.

Ice blockage of water intakes. Carey, K.L., *U.S. Nuclear Regulatory Commission. Contractor report*, Mar. 1979, NUREG/CR-0548, MP 1197, 27p., 19 refs.
- Water intakes, Frazil ice, Bottom ice, Ice cover.
- Ice blockage of water intake structures can pose serious threats to the availability of cooling water at thermal power plants. Ice blockage difficulties are described as they may occur in rivers, lakes, reservoirs, and estuaries, and as they may affect intakes either at the surface or submerged. Characteristics of both surface sheet ice and frazil ice are examined: formation processes, sizes, thicknesses, movement or mobility, and modes of blockage or adhesion. Case histories of incidents of ice blockage of intakes are given. Solving ice blockage problems, either through original design, post-construction modification, or revised operational techniques is discussed.

Ignatov, V.S., ed.

Research projects, Antarctica.

This volume reports on the winter activities of the 19th SAE. The first half includes a description of the expedition's program, short reports on the activities of each working group's accomplishments, and a summary of engineering and construction work carried out during the period. The second half is composed of articles written by expedition members to report on

their work in geophysics, atmospheric physics, oceanography, zoology, medicine and other disciplines.

Winter activities of the 19th SAE. [Zimovochnye raboty deviatnadtsatoi sovetsskoj antarkticheskoi ekspeditsii], Ignatov, V.S., *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.69, p.9-48, In Russian.

Research projects, Antarctica.

This overall description of the wintering over activities of the 19th SAE is divided into two sections. The first outlines the organization and methods of the scientific activities—observational program, surface and upper-air meteorological research, geophysical studies, glaciological investigations, oceanographic research, and medical research. The second portion covers the engineering and construction work accomplished by the group. Appended is a list of expedition participants by station and specialty.

Geodetic and meteorological investigations of ground refraction over antarctic continental ice. [Geodezicheskie i meteorologicheskie issledovaniya zemnoi refraktsii nad poverkhnost'iu antarkticheskogo materikovogo l'da],

Dittrich, G., et al, *Sovetskaya antarkticheskaya ekspeditsiya. Trudy*, 1978, Vol.69, p.100-119, In Russian. 10 refs.

Helwig, A.

Glacial meteorology, Refraction.

Preliminary results of investigations into the effect of ground refraction on accuracy of vertical angles and distance measurement in Antarctica are given. Studies were done by a group of meteorologists and geodesists by means of simultaneous geodetic and meteorological observations at three fixed points under various weather conditions. The coefficient of refraction was computed from vertical gradient air temperature data, then compared with the refraction coefficient from geodetic readings. Thus can the effect of ground refraction on accuracy in high southern latitudes be assessed.

Influence of freezing and thawing on the resilient properties of a silt soil beneath an asphalt concrete pavement.

Johnson, T.C., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, CR 78-23, 59p., See also 32-3761.

Cole, D.M., Chamberlain, E.J.

Bituminous concretes, Subgrade soils, Soil freezing, Ground thawing, Elastic properties.

Stress-deformation data for silt subgrade soil were obtained from in-situ and laboratory tests, for use in mechanistic models for design of pavements affected by frost action. Plate-bearing tests were run on bituminous concrete pavements constructed directly on a silt subgrade, applying repeated loads to the pavement surface while the silt was frozen, thawing, thawed, and fully recovered. Repeated-load laboratory triaxial tests were performed on the silt in the same conditions. Analysis of deflection data from the in-situ tests showed resilient moduli of the silt as low as 2000 kPa for the critical thawing period, and 100,000 kPa or higher when silt was fully recovered. Analysis of the laboratory tests, which gave moduli comparable to the latter values, showed that resilient modulus during recovery from the thaw-weakened condition can be modeled as a function of the changing moisture content.

U.S. contribution to the Polar Experiment (POLEX). Part 1. POLEX-GARP (North). Part 2. POLEX-GARP (South).

Joint U.S. Polex Panel, Washington, D.C., 1974, 173p.

Research projects, Sea ice, Ice cover effect, Weather forecasting, Heat balance.

This publication reviews the national research effort in both polar regions to determine the physical basis for climates; defines the national contribution to polar research; explores the means for international collaboration; and continues review of the scientific merits of the Arctic Ice Dynamics Joint Experiment (AIDJEX). Both parts outline general and specific recommendations, background information and considerations affecting the U.S. contribution, a summary of program elements, and a time schedule for execution of the program. In addition, Part 1 contains appendices A through F which are devoted to the following respective topics: meteorological observations in support of weather forecasting, processes at and above the ice, heat balance of the polar oceans, numerical modeling experiments, climate record, and abbreviations. CEL building and experimental subgrade cooling system, Barrow, Alaska—construction history and performance characteristics. Barthelmy, J.L., U.S. Naval Construction Battalion Center, Port Hueneme, Calif. *Civil Engineering Laboratory. Technical report*, Mar. 1979, R870, 56p., 14 refs.  
Permafrost preservation, Cooling, Buildings, Subgrades, Heat transfer.  
During the summer of 1976, personnel from the Civil Engineering Laboratory erected a building on the ice-rich permafrost near Barrow, Alaska. The structure, placed on just 1 foot of gravel, has been used as a test bed to evaluate an experimental subgrade cooling system. The cooling system consists of 15 loop-configured heat exchangers called convection cells. During the winter months, heat losses from the building into the permafrost are redirected via these convection cells to the cold environment outside, thus preventing progressive degradation from thaw. To date, data collected from some 150 thermocouples located in the subgrade and heat-exchange systems have shown that the rate of winter heat removal is even greater than originally anticipated. Although a small cyclical displacement of the floor and foundation resulting from seasonal summer thaw and winter freezeback has been apparent, this movement is minimal compared to settlement which would have occurred had the massive ice present in the subgrade been allowed to thaw unchecked.

Blank corrections for ultratrace atomic absorption analysis. Cragin, J.H., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, CR 79-3, 5p., ADA-066 979, 2 refs.  
Quarry, S.T.  
Water chemistry, Chemical analysis, Metals, Atomic absorption.  
Both flame and flameless atomic absorption (AA) measurements require a distilled water blank correction. This correction is due to the analyte contained in the distilled water used to prepare the standards and not, as commonly thought, to the reference "blank" used to zero the instrument. Flameless AA analyses of acidified heavy metal samples generally require additional corrections for the furnace deflection blank and for an acid blank. To prevent adsorption losses, the acid blank should be determined by extrapolation of a series of acid dilutions in distilled water.

- Tels, R.V., Kiselevskii, M.A., Kochetkova, S.N.  
Snow composition, Isotope analysis, Oxygen isotopes, Antarctica—East Antarctica.
- Oxygen isotope composition was measured in snow samples taken at five locations between Mirnyy and Pionerskaya Stations. Delta-O-18 value decreases with distance from the coast and altitude, as average air temperature does. In the coastal zone (less than 50 km from Mirnyy, altitude less than 0.86 km, air temp. above -19°C) snow oxygen isotope levels do not vary significantly. Between 50 and 353 km from the coast delta-O-18 values change 0.6‰ per degree of average air temperature. Observed variations of oxygen isotopes in annual snow layers are also due to local features of snow cover formation; thus they cannot be used directly to indicate temperature changes over the years. Spatial irregularities in snowfall lead to significant variation in isotope composition in samples taken from several points in the same general area.

Effect of the oceanic boundary layer on the mean drift of pack ice: application of a simple model.  
McPhee, M.G., *Journal of physical oceanography*, Mar. 1979, 9(2), p.1198, p.388-400, 14 refs. For this paper from another source, see 32-4551.
- Pack ice, Drift, Boundary value problems, Mathematical models, Ice water interface.
- Smoothed records of ice drift, surface wind and upper ocean currents at four manned stations of the 1975-76 AIDJEX experiment in the central Arctic have been analyzed to provide a statistical relationship between stress at the ice-ocean interface and ice-drift velocity during a 60-day period when the ice was too weak to support internal forces. Essential features of the model are dynamic scaling for velocity, kinematic stress and length, with exponential attenuation of a linear dimensionless eddy viscosity. Currents measured 2 m below the ice confirmed the shape of the stress vs ice speed curve and provided an estimate of the angle between surface stress and velocity. The model was used to qualitatively estimate the effect of a pycnocline at 25 m on surface characteristics. The observed behavior when stratification at that level was most pronounced tended toward slightly higher drag at higher speeds, which is qualitatively consistent with the model results.

Shoji, H.

Ice cores, Drill core analysis, Ice mechanics, Ice strength, Static loads, Ice hardness, Ice compression, Hydrostatic pressure, Mechanical tests.

Effects of hydrostatic pressure on the mechanical properties of antarctic deep core ice were investigated by the use of a special uniaxial testing machine installed in a high pressure cell. The design and construction of the pressure cell as well as of the testing machine are described. Hydrostatic pressure up to 100 MPa could be attained and kept for several days in the cell, using a hydraulic pump with silicone oil. The testing machine was driven from the outside of the pressure cell by a rod penetrated through its thick wall. Volume change of the inner space of the cell caused by the movement of the driving rod was compensated by the movement of another rod from the opposite direction at the opposite end of the cell. The frictional force exerted on the driving rod at the bore hole in the cell wall was well separated from the real stress generated in a specimen, due to its uniaxial deformation. Preliminary compressive tests carried out at 30 MPa revealed that the strength of the deep core ice increased under hydrostatic pressure. This hardening effect is attributed to the shrinkage or closure of air-bubbles and cleavage cracks formed in the relaxation process of the deep core ice.

Choudhury, B.J., Gloerson, P.

Microwaves, Brightness, Firn, Temperature measurement.

The microwave emission from a half-space medium, characterized by coordinate dependent scattering and absorbing centers, was calculated by numerically solving the radiative transfer equation by the method of invariant imbedding. A Mie scattering phase function and surface polarization was included in the calculation. Also included are the physical temperature profile and the temperature variation of the index of refraction for ice. Using published values of grain size and temperature profile data of polar firn, the brightness temperature was calculated for the 1.35 cm and 0.8 cm wavelengths. For selected regions in Greenland and Antarctica, the results are in reasonable agreement with the observed Nimbus-5 and Nimbus-6 ESMR data. (Auth.)

Effect of formation of the west antarctic ice sheet shallow-water marine faunas of Chile. Zinsmeister, W.J., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.25-26, 3 refs. Ice sheets, Ice formation, Ocean currents, Plankton, Climatic changes. The biological and geological processes along the west coast of South America are dependent on the Humboldt Current, and any variation in the marine and polar climate in the southern Circum-Pacific should be reflected by corresponding changes in the Humboldt Current. The history of past climatic events in this area is examined. Recent work on the shallow-water molluscan faunas of central Chile indicates that subtropical conditions existed during the Middle and Upper Miocene when temperatures would have been expected to be much colder. These faunas abruptly disappear at the end of the Miocene and are replaced by cool temperate faunas similar to those existing today along the coast of Chile. This sudden faunal change appears to be related to the formation of the west antarctic ice sheet during the latest Miocene and Lower Pliocene and the subsequent introduction of colder subantarctic waters into the Humboldt Current.

Soil weathering sequences in Wright Valley. Bockheim, J.G., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.36-39, 7 refs. Weathering, Soils, Alpine glaciation, Alpine soils, Moraines, Antarctica—Wright Valley. Soils in Wright Valley were examined during the 1977-78 field season to establish their relationship to Wright Lower, Wright Upper, and alpine glaciations, and to compare them with soils previously investigated in Taylor Valley. Detailed descriptions were made for 55 profiles. A total of 295 soil samples were collected, and surface weathering features were recorded at 28 localities. A map of Wright Valley gives the location of soil profiles and landforms, and tabular data reflect the soil morphology, surface weathering characteristics, the effects of advances of the Wright Lower Glacier, and correlation of Wright and Taylor Valley soils.
- 33-3345  
Antarctic search for meteorites during the 1977-78 field season. Cassidy, W.A., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.39, 4 refs. Glacier flow, Ablation. Of 310 samples recovered from major bare ice patches along the western side of Allan Hills, 307 were identified as meteorites. One meteorite was found on ice at a field camp located between the eastern and western arms of Allan Hills. It is believed that the collection represents 20 to 50 new finds. The specimens were found for the most part on the upper and lower limbs of an ice monoclone, which may reflect the existence of a near-surface ridge across which the ice is flowing. Data on ice-flow regimes could help in the search for meteorite concentrations. On the other hand knowledge of meteorite concentrations should help to interpret ice-flow regimes and to infer past climate.
- 33-3346  
Ross Sea glaciations: events in Lower Victoria Valley. Borns, H.W., Jr., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.43-44, 3 refs. Glacial geology, Glaciation, Glacial deposits, Antarctica—Victoria Valley. The glacial geology of the Lower Victoria Valley was studied in order to determine whether, and to what extent, lower Victoria Valley had been invaded from the seaward side by ice of the Ross Sea glaciations. The broad distribution of volcanic clasts and apparent lack of in-place young volcanics in the lower Victoria Valley area suggest that a Ross Sea source is the most

reasonable explanation. Preliminary field work suggests that Victoria Lower Glacier has expanded several times and out of phase with at least many of the alpine glaciers that drain into the valley. This evidence, coupled with the elevation of the bedrock beneath the Victoria Lower Glacier and with the presence of scoreaceous basalt clasts in the drift, suggests the possibility that ice of the Ross Sea glaciations moved into Lower Victoria Valley several times. An 18-kg iron meteorite, thought to be the largest yet found in Antarctica, was discovered embedded in the till surface on the north side of the valley floor approx 1 km in front of the Victoria Lower Glacier.

**Glacial geologic studies in the McMurdo Sound region.**

Stuiver, M., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.44-45, 7 refs.

Denton, G.H., Kellogg, T.B., Kellogg, D.E.

**Glacial geology, Moraines, Glacial deposits, Drift, Antarctica—McMurdo Sound.**

Glacial geologic studies during the 1977-78 field season included the following projects: mapping surficial deposits in Wright Valley between Wright Lower Glacier and Lake Vanda; collecting additional algal C-14 samples from deltas deposited in Glacial Lake Washburn in Taylor Valley; obtaining a chronology for young, ice-cored moraine ridges that border most glaciers in the McMurdo Sound Region; collecting shells and obtaining initial C-14 dates from the McMurdo Ice Shelf; and examining the glacial geology of the Ruppert and Hobbs Coasts.

33-3348

**Reconnaissance of the glacial geology of Hobbs Coast and Ruppert Coast, Marie Byrd Land.**

Karlén, W., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.46-47, 7 refs.

Melander, O.

**Glacial geology, Striations, Weathering, Glacier oscillation, Antarctica—Marie Byrd Land.**

Examples of striations, weathering, and glacial polish observed during reconnaissance of the glacial geology of Hobbs Coast and Ruppert Coast are discussed. In the Ruppert Coast area striations shown an ice movement mainly toward north and north-west (essentially the same as the present). At a few places striations indicate that an ice movement toward northeast occurred at some time. Directions of the striations in the Hobbs Coast area were also basically the same as the direction of ice movement that now occurs (north and, locally, west). Striations dated at 13 m.y. old have been reported from Boyer Butte. Field observations indicate that glaciers in direct contact with the sea have retreated through calving, while glaciers not in direct contact with the sea show no evidence of a retreat in recent time.

33-3349

**Fixed nitrogen in antarctic ice and snow.**

Parker, B.C., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.47-48, 4 refs.

Zeller, E.J., Harrower, K., Thompson, W.J.

**Ice composition, Snow composition, Firn, Chemical analysis, Ice cores, Antarctica—South Pole.**

Using portions of a 100-m South Pole firn core and snow pit samples, both a short term and long term cyclicity have been identified in the concentrations of nitrate (NO<sub>3</sub>) and ammonium (NH<sub>4</sub><sup>+</sup>) ions. The presence of significant NH<sub>4</sub><sup>+</sup> and absence of detectable nitrite (NO<sub>2</sub>) in clean antarctic firn, ice, and snow had not been previously reported. Several climatic minimums apparently correspond to low NO<sub>3</sub> and NH<sub>4</sub><sup>+</sup> levels generally. A Vostok ice core sample approx 10,000 yr old revealed the highest NO<sub>3</sub> concentration of 525 microg of NO<sub>3</sub>-N per liter. Potential sources of these substances in antarctic snow and ice are being tested.

33-3350

**Ultrasonic measurements on deep ice cores from Antarctica.**

Gow, A.J., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), MP 1202, p.48-50, 3 refs.

Kohnen, H.

**Ice cores, Ultrasonic tests, Ice crystal structure, Antarctica—Byrd Station.**

This report discusses some results of recent measurements of ultrasonic velocities performed on ice cores collected in 1968 at Byrd Station. The analytical technique is described. It is concluded that measurement of ultrasonic velocities of cores from deep drill holes enables monitoring of the relation characteristics of the cores and determination of the gross trends of c-axis orientation in the ice sheet. Supplemented by optical thin section, studies can verify the exact nature of the fabric at any given depth and any inclination of the fabric symmetry axis with respect to the direction of propagation of P-wave velocity.

33-3351

**905-meter deep core drilling at dome C (East Antarctica) and related surface programs.**

Lorius, C., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.50-51, 8 refs.

Donnou, D.

**Ice cores, Ice composition, Drilling, Ice mechanics, Snow surveys, Antarctica—East Antarctica.**

Using a newly developed electromechanical corer a 905-m core was recovered after drilling at dome C for 42 days. Several operations were carried out along with the drilling: logging and sampling for further laboratory studies, total gas content determinations, crystal size measurements, tests for mechanical properties of the ice, and filtration of the collected meltwater.

*In situ* measurements consisted of diameter and temperature profiles. A surface program was also carried out. It included meteorological observations and atmospheric sulfur dioxide sampling. Snow surface and accumulation studies were conducted, and the 5-m-deep pit was extended down to 8 m for stratigraphy and snow sampling. Shallow coring and temperature measurements were also performed.

33-3352

**Radio echo sounding of the antarctic ice sheet, 1977-78.**

Drewry, D.J., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.52-53, 11 refs.

Meldrum, D.T.

**Radio echo soundings, Ice sheets, Ice shelves, Subglacial observations.**

A total of 141 flight hours were flown during 13 radio echo sounding missions in Antarctica between Jan. 13 and 23, 1978. Sounding was achieved along 25,000 km. Investigations were carried out in the International Antarctic Glaciological Project area, in West Antarctica, and in the Ross Ice Shelf Project area. The first large sub-ice lake in West Antarctica was detected along the western flank of the Ellsworth Mountains. The water body is at least 13 km in extent occupying a bedrock hollow beneath 3,500 m of ice. Several smaller lakes were also identified. Other investigations include studies of layering in East Antarctica; studies of birefringence and thus anisotropy of the dielectric constant of radar wave propagation in ice sheets; sounding behind the McMurdo dry valley area indicating the presence of sub-ice water, moraines, and a local ice surface dome; estimation of the heat flux through the base of an ice sheet; and study of the relative chronology between formation of ice sheets in East and West Antarctica.

33-3353

**Glaciology near Byrd Station.**

Whillans, I.M., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.53-54, 6 refs.

**Ice sheets, Glacier flow, Glacier oscillation, Boreholes, Snow accumulation, Antarctica—Byrd Station.**

The dynamics of ice flow along the Byrd Station strain network, and the interpretation of the Byrd Station core results are discussed. It is found that the ice sheet near Byrd Station has been flowing in a simple, nearly steady-state fashion for some tens of thousands of years. Although the ice sheet is close to steady-state, it is thinning slowly, at a rate of little more than 0.03 m/yr. This is attributed to a warming effect of about 8°C which took place 14,000 yr ago. Because the tilting of the Byrd Station core hold has been measured, it is now possible to model the ice flow and to calculate the depth-age relationship for the core with some reliability. Variations in snow accumulation on the ice sheet near Byrd Station have been analyzed statistically.

33-3354

**Ross Ice Shelf Project 1977-78.**

Clough, J.W., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.54.

**Ice shelves, Research projects, Antarctica—Ross Ice Shelf.**

The 1977-78 Ross Ice Shelf Project (RISP) field season was marked by two major achievements: penetration of the ice shelf at the RISP drill camp J-9 and completion of the Ross Ice Shelf Geophysical and Glaciological Survey (RIGGS).

33-3355

**Access hole drilling through the Ross Ice Shelf.**

Browning, J.A., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.55.

Somerville, D.A.

**Ice shelves, Ice drills, Boreholes, Drilling, Antarctica—Ross Ice Shelf.**

Two access holes were drilled through the 1,380-ft ice thickness of the Ross Ice Shelf, using a flame-jet drill powered by an internal burner whose reactants are compressed air and fuel oil provided at high pressure. The drilling equipment and procedures used are described. The diameter of one of the holes showed large irregularities over the entire hole length. Reasons for the formation of these irregularities are not understood. It is considered doubtful that flame drilling beyond 3,000 ft in solid ice is practical.

**Glaciological measurements on the Ross Ice Shelf.**

Thomas, R.H., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.55-56, 6 refs.

MacAyeal, D.R.

**Ice shelves, Strains, Antarctica—Ross Ice Shelf.**

Field work to complete the Ross Ice Shelf Geophysical and Glaciological Survey (RIGGS) was to involve remeasurement of 82 Kehnle-type strain rosettes planted the previous season in a grid pattern on the ice shelf. It was further planned to remeasure detailed strain networks along two 40-km lines near camp C-6 and along a 35-km line on Cray Ice Rise. Precise position fixes were to be made at grid stations using a Geociever. Most of the work was accomplished following major delays.

33-3357

**Ross Ice Shelf Geophysical survey, 1977-1978.**

Greischar, L.L., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.56-59, 11 refs.

Shabtaie, S., Albert, D.G., Bentley, C.R.

**Ice shelves, Geophysical surveys, Sounding, Radar echoes, Electrical resistivity, Antarctica—Ross Ice Shelf.**

The geophysical program on the ice shelf began with gravity and radar sounding profiles and a seismic-surface-wave experiment

at station Q-13. During the last week of Dec., five remote field sites were occupied with support of the Twin Otter airplane. Gravity measurements, radar sounding of ice thickness, and seismic sounding of water depth beneath the ice were made at all sites. In addition, studies of seismic and radio-wave velocities within the ice shelf were made at two of these sites and an electrical resistivity profile was completed at one. Early in Jan. airborne radar sounding was made along 1,800 kilometers of flight lines. The measurements are described.

**Antarctic ice core recovery.**

Chiang, E., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.59-61, 9 refs.

Langway, C.C., Jr.

**Ice cores, Ice composition, Ice density, Ice temperature, Ice shelves, Aerosols.**

As part of the Polar Ice Core Analysis Program ice cores were obtained from sites Q-13, C-16, J-9, on the Ross Ice Shelf, and South Pole. These cores and other samples were collected to permit further investigation of the seasonal variation in sea salt concentrations, delineation of aerosol sources by chemical analysis, and assessment of the factors influencing the variations in the physical characteristics of the ice at these and other selected sites. In addition to the ice cores, snow and ice samples were collected from the ice towers near the summit of Mt. Erebus and also on the Ross Ice Shelf for preliminary investigations of the dispersion of aerosols emitted in the Mt. Erebus plume toward the shelf. Surface-to-core tie-in studies were conducted in the vicinity of each site, and measurements were made of core density, stratigraphy, and corehole temperature.

33-3359

**Erebus glacier tongue movement.**

Holdsworth, G., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.61-63, 3 refs.

Holdsworth, R.

**Glacier tongues, Glacier oscillation, Ice deformation, Ice mechanics, Stresses, Antarctica—Erebus Glacier Tongue.**

Ice deformation measurements were made on the Erebus Glacier Tongue, McMurdo Sound, in an attempt to support the hypothesis that, as a result of ocean wave excitation, a floating glacier may oscillate at a frequency that corresponds to one of its higher modes. Under storm conditions with open water, the amplitude and duration of vertical oscillations may be caused by the bending stresses in the resonant-like motion that cause fatigue failure in the ice. Other measurements included density, temperature, ice thickness, and water depth.

33-3360

**Green iceberg samples in the Weddell Sea.**

Amos, A.F., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.63-64, 2 refs.

**Icebergs, Ice composition, Weddell Sea.**

A green and white iceberg was observed and sampled in the eastern Weddell Sea from ARA Isla Orcadas cruise 15 in Feb. 1978. The bulk of the iceberg was comprised of bluish-white, opaque ice that was horizontally stratified but had a rougher top surface than a typical tabular iceberg. The "abnormal" portion of the iceberg was a deep green color, appearing almost black in certain light. The iceberg was estimated to be about 20 m high, 100 m long, and 40 m wide and was tilted at an angle of approximately 35 deg. The green "outcrop" stretched along the entire side that was tilted downward and extended beneath the sea surface. The maximum height of green ice above the surface was approximately 14 m. Results of analyses of the iceberg sample are presented. None of the results so far can be used to postulate an origin for the green iceberg.

33-3361

**Numerical model of antarctic sea ice.**

Parkinson, C.L., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.65-67, 4 refs.

Rayner, J.N.

**Sea ice distribution, Mathematical models, Ice cover thickness.**

A large scale numerical model, developed to simulate the annual cycle of sea ice in the Southern Ocean, is described. The model employs a 41 by 41 rectangular grid with 200-km horizontal resolution, an 8-hr timestep, and four vertical layers: ice, snow, ocean, and atmosphere. Both thermodynamic and dynamic processes are incorporated and there is an allowance for leads. The model is run for a 4-yr simulation period, allowing sufficient time for the yearly cycle to reach an approximate equilibrium. Although the model produces some satisfactory results on a large scale, smaller scale features such as the observed tendency for thicker ice at the northern reaches of the Weddell Sea than at the Weddell Sea coast are generally not reproduced. The results, however, demonstrate the feasibility of including sea ice in global models of the atmosphere and/or oceans.

33-3362

**Continuous surface strain measurements on sea ice and on Erebus Glacier Tongue, McMurdo Sound, Antarctica.**

Goodman, D.J., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.67-70, 12 refs.

Holdsworth, R.

**Sea ice, Glacier tongues, Ice runways, Strains, Ice mechanics, Antarctica—Erebus Glacier Tongue.**

These investigations included measurement of the flexural wave energy on the sea ice close to the Erebus Glacier Tongue, monitoring of the surface strain changes on the glacier itself, and measurement of continuous surface strain (in a frequency range

between 1 hertz and d.c.) close to the annual runway on the sea ice close to McMurdo Station as LC-130 transport planes landed and vehicles passed along the ice road to the runway. Strains were measured continuously to an accuracy of 1 in 100,000,000 strain, over a 5-m gage length with a geophysical wire strainmeter. Typical examples of the data obtained are presented and discussed.

33-3363

**Sea ice and ice algae relationships in the Weddell Sea.** Ackley, S.F., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), MP 1203, p.70-71, 7 refs. Taguchi, S., Buck, K.R.

**Sea ice, Pack ice, Algae, Cryobiology, Ice breakup, Chemical composition, Weddell Sea.**

Analysis of data obtained during a 1977 cruise in the Weddell Sea indicates that the ice algal community found during that cruise is distinct from others that have been described (for example, the bottom epontic community in the land-fast ice in McMurdo Sound, the surface communities off East Antarctica, and the bottom communities in Arctic Pack ice.) Unlike these other communities, the Weddell pack algae is dominantly an interior one, existing not at the surface or bottom but at mid-depth (65 to 2.15 m) within the ice. The formation of this community is dependent on the unique thermal and physical setting for Weddell sea pack ice. Brine drainage processes are initiated by summer warming, but are not carried through to completion as in the Arctic. This process causes a redistribution of salinity, maximizing in the mid-depth regions of the ice and apparently leading to algae production because of the relatively higher nutrient levels at these mid-depths. A qualitative model indicating the relationship between the thermally induced brine migration and subsequent algae growth is given.

33-3364

**Tritium and carbon-14 distributions in McMurdo Sound, 1977.** Jackson, T.L., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.71-73, 7 refs.

Linick, T.W., Michel, R.L., Williams, P.M.

**Ice composition, Radioactive isotopes, Ice cores, Fall-out, Sea ice, Pack ice.**

Sea waters from McMurdo Sound sampled for tritium and C-14 concentrations, and ice cores of 1-yr-old pack ice from the McMurdo Station sampling site were analyzed for tritium. Data for the samples are tabulated. Biological studies have indicated that water flows northward from under the Ross Ice Shelf on the west side of McMurdo Sound. The highest microbial activity was found at McMurdo Station, and the lowest activity, on the west of the Sound. These investigations indicate that the seawater on the east side of McMurdo may have undergone a more recent interaction with the atmosphere than the west side, causing higher concentrations of bomb-produced radionuclides such as tritium and C-14. Higher concentrations of both radionuclides were found at the McMurdo sampling site. However tritium concentration closer to values found in the west side of McMurdo were found in the open Ross Sea. Thus, other factors, such as snow melt, may influence concentrations at McMurdo. The average tritium concentration for the ice cores was 1.01 tritium units, slightly higher than that found in the McMurdo seawater.

33-3365

**Melting snow in the dry valleys is a source of water for endolithic microorganisms.**

Friedmann, E.I., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.162-163, 10 refs.

**Snow melting, Microbiology, Meltwater, Deserts, Cryobiology.**

The role played by melting snow on endolithic microbial growth on rocks in the antarctic dry valleys has been investigated. Observations suggest that melting snow is a major, or perhaps exclusive, source of water for endolithic microorganisms in the antarctic desert. Like dew in hot deserts, meltwater is available only intermittently; endolithic microorganisms that rely on these water sources periodically undergo stages of desiccation. It appears likely that endolithic microorganisms of the antarctic cold desert are being moistened less frequently than those in hot deserts.

33-3366

**Airborne particles and electric fields near the ground in Antarctica.**

Benninghoff, W.S., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.163-164.

Benninghoff, A.S.

**Aerosols, Particles, Snow composition, Electric fields.**

The kinds, numbers, and deposition of airborne particles within 2 m of the ground were investigated at several antarctic sites. The airborne organic particles, derived from indigenous organisms, were relatively few at Arrival Heights and Lake Vanda, still fewer at McMurdo, and absent at South Pole station. Two categories of introduced organic particles greatly outweighed the numbers of native particles: cells and tissue fragments of conifer wood, and clothing fibers, both natural and synthetic. Snow samples collected at South Pole station contained incompletely burned diesel fuel residue and small quantities of mineral grains as well as conifer wood cells and clothing fibers, all presumably introduced by station activity. Electric field studies suggest that during periods of blowing snow and/or dust, greater numbers of airborne particles would tend to be deposited on wet soil or rock surfaces. This principle may be of basic significance in processes of diaspore lodgment and germination.

33-3367

**Ecosystem comparisons of oasis lakes and soils.**

Parker, B.C., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.168-169, 8 refs.

Simmons, G.M., Jr.

**Lakes, Ecosystems, Meltwater, Limnology, Soils, Antarctica—Victoria Land.**

The objective of this research was to gain an understanding of the interaction between dry valley (oasis) lakes and their associated soil and glacial meltstream ecosystem, and to assess the importance and magnitude of biotic processes influencing the development and evolution of these arctic antarctic lakes. Ten lakes in southern Victoria Land were surveyed during the 1977-78 austral summer. Most of the lakes had a benthic (attached) algal mat community. Wherever foam was collected, it was very high in chlorophyll, ATP, and cell numbers. In deeper arctic and nonmixing lakes such as Bonney, Vanda, Fryxell, and Chad, much of the fluorescence near the saline bottom was pheophytin, suggesting a long history of productivity. In contrast, Miers, Joyce, and Hoare, with relatively fresh bottom water, had little pheophytin. Phosphate in all lakes was scarce relative to certain potential nutrients. Phosphorus-33 uptake data suggest that phosphorus may be the major nutrient limiting productivity in these lakes. The high diversity of algal and microfaunal species from the lakes was unexpected. The first psychrophilic freshwater algae from Antarctica have been obtained. Despite the high concentrations of NO<sub>3</sub> and NH<sub>4</sub> ions in glacial ice and lake water, acetylene reduction studies showed that nitrogen fixation by benthic algal mats takes place.

33-3368

**Atmospheric ice crystals at the South Pole in summer.**

Ohtake, T., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.174-175, 6 refs.

**Ice crystal formation, Precipitation (meteorology), Ice crystal nuclei, Clouds (meteorology), Antarctica—Amundsen-Scott Station.**

The formation mechanisms of atmospheric ice crystals at the South Pole have been studied. The ice crystals formed in three different layers. High clouds (cirrus or cirrostratus) formed 1 mm or larger assembled-bullet ice crystals. Middle clouds (altostratus or altocumulus) created combined ice crystals in the form of side planes, bullets, and columns about 1 mm in size. Ice crystals from both high and middle clouds form and grown in the clouds, then fall out over long distances. The lowest 1,000 m, without visible cloud layer, but sometimes accompanied by fractostratus clouds, created ice crystals in the form of thin hexagonal plates and columns smaller than 0.2 mm. This last kind of ice crystal is the most complicated and forms by water vapor deposition directly onto nuclei under sub-ice saturation conditions. The stepped column ice crystals at South Pole station may result from the freezing of low-level stratus cloud droplets.

**Trace elements in the antarctic atmosphere.**

Zoller, W.H., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.187-188, 6 refs.

Cunningham, W.C., McGregor, C., Duce, R.A.

**Snow composition, Aerosols, Ice composition, Atmospheric composition.**

The project described in this article is designed to ascertain the composition of antarctic aerosols and to determine their source. The results will be used to evaluate the relationship of atmospheric aerosol burdens and the composition of snow. Efforts at South Pole Station are concentrating on the collection of particle samples for trace metal analysis and on both particulate and gaseous halogen samples. Radon-222 measurements are also being made daily. The results of chemical analysis of snow samples from the surface and from a 5-m pit will be compared with the atmospheric concentrations of elements measured. A plot of the chemical compositions of the atmosphere and snow from earlier measurements shows agreement within a factor of 3 or 4 for 13 elements determined. These results may indicate that the concentrations of these elements in snow are closely related to atmospheric burdens. Samples of ice were also collected from the summit of Mt. Erebus for analysis of halogens and other trace species.

**Gamma ray activity from radioactive fallout at the South Pole.**

Dreschhoff, G., et al, *Antarctic journal of the United States*, Oct. 1978, 13(4), p.193-194, 4 refs.

Zeller, E.

**Fallout, Radioactivity, Snow impurities, Antarctica—South Pole.**

Significant variations in the gamma ray activity at specific levels below the surface were detected in a 4-m-deep pit on the Ross Ice Shelf at Williams Field and in a 5-m-deep pit in Marie Byrd Land. A much more successful test conducted in a 10-m-deep glaciological pit near South Pole Station revealed three individual zones of fallout concentration at depths of 1.4 m, 3.1 m, and 4.4 m. The increased gamma ray activity at these levels is very distinct and amounts to a 5 to 10% increase over the level of the background radiation. Beta activity peaks have been found at the same three locations by laboratory measurements. Each fallout zone can be correlated with a nuclear weapons test series.

33-3372

**Ship operations, Deep Freeze 78.**

Eckman, J.F., *Antarctic journal of the United States*, Oct. 1978, 13(4), p.227-229.

**Icebreakers.**

The itineraries and operations of the icebreakers *Glacier*, *Burton Island*, and *Polar Star*, the cargo ship *Bland*, and the tankship *Maumee* in support of the U.S. Antarctic Research Program are described. The *Glacier* and *Burton Island* furnished support for scientific activities. The channel break into Winter Quarters Bay was accomplished by the *Polar Star*. The *Bland* and *Maumee* provided resupply support. Icebreaker helicopters flew 169 flights in support of science and operations. The *Burton Island* was decommissioned after her return to Oakland, Calif.

Meteorology.  
This report contains the formal papers presented at the Polar Meteorology Workshop, held in Reno, Nevada, 6-8 May 1975. The discussion and planning which occurred at the workshop are presented under four principal headings: Climatology and Synoptic Meteorology; The Chemistry of Atmospheric Particulates and Gases and Their Roles in Precipitation Processes; Energy Transfer and Atmospheric Structure; and Facilities and Techniques. The three day workshop was attended by 46 scientists engaged in meteorological research in both north and south polar regions. Critical issues were identified, as were new areas of research need. Recommendations for future research in polar areas are presented, together with explanations and justifications for the provision of specific facilities for the conduct of this research in the Arctic and Antarctic. (Auth.)

Snow crystals, Snow impurities, Snow composition, Precipitation (meteorology), Antarctica—Ross Ice Shelf.  
Preliminary study of replicated snow crystals in Antarctica indicates that the relative proportions of diffusional and accretional growth change with distance from the ocean, with diffusional processes becoming dominant in the more inland regions. It was proposed that variations in the chemistry of antarctic snow and ice may in part be accounted for by the temporal and spatial distribution of the atmospheric growth mechanisms of snow. These phenomena were investigated at two camps on the Ross Ice Shelf. The first results of analysis comparing relationships between precipitation processes and snow chemistry in time and space are presented in tables. The ratios shown are indicative of normal sea water values for the coastal stations. Further inland the ratios show evidence of enrichment in K and Mg. Apparently significant enrichment is occurring in specific precipitation types and depends on the type, e.g., water droplets, accreted ice crystals, and diffusional growth crystals.

Underground facilities, Heat transfer, Waste disposal, Heat recovery, Heat sinks.  
This report presents criteria, engineering information and estimation procedures for the disposal of waste heat associated with the generation of power required to supply the needs of hardened defense underground installations. The major emphasis is placed on the temporary disposal of waste heat below ground while the installation is under attack and cannot rely upon aboveground disposal. A series of sample problems is included to illustrate the use of the estimation procedures presented in the report. All of the sample problems are based on the sizing of a heat sink system for an underground nuclear power plant. Under the design criteria which were assumed for the sample problems, it is shown that the combination ice/water type heat sink concepts provide the most cost effective solutions.

Infrared thermography of buildings—a bibliography with abstracts. Marshall, S.J., *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1979, SR 79-1, 67p. ADA-068 682.  
Bibliographies, Infrared radiation, Buildings, Heat loss, Moisture.  
This report contains annotated abstracts of over 100 reports (66 more than the 1977 edition) on the new, but rapidly expanding subject of infrared thermography of buildings. The references cover remote sensing airborne surveys of large numbers of buildings, close-up ground surveys of individual buildings, and qualitative (speculative) and semi-quantitative (ground-truth) field surveys. The report presents examples of thermographic energy audits, roof moisture surveys, building retrofit surveys, solar panel analysis, window assessments, and other practical applications by government agencies and private sector survey teams. It lists research and development efforts to provide fundamental information to improve quantification accuracy, evaluate equipment, and develop interpretation standards, along with examples of daily usage in contract specifications, public awareness programs, and product testing.

Rotary snowplow for clearing sidewalks. Horikawa, G., *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1979, TL 710, 23p., ADA-067 989, Translation of Engineering report (Japan) 5(46):51-60.  
Snow removal equipment.  
The design and development of a rotary snowplow for use on sidewalks is described. The vehicle was designed to remove 600 tons/hr of snow at a forward speed of 4 km/hr. It weighs about 6000 kg and is powered by a 130-hp diesel engine. The snow removal equipment consists of a two-stage rotary blower with a screw type auger. Two plows were constructed and tested. Results so far have been unsatisfactory, mainly because the rear end wobbles at full speed and steering becomes difficult. The snow removal capability also did not meet the design figure.

Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, 928p., Principal investigators' annual reports for the year ending March 1978. Numerous refs. For selected individual reports see 33-3479 through 33-3492.  
Sea ice, Ice mechanics, Remote sensing, Ocean currents, Meteorology, Offshore land forms, Oceanography, Mathematical models.
- 33-3479**  
Morphology of Beaufort, Chukchi and Bering Seas near shore ice conditions by means of satellite and aerial remote sensing.  
Stringer, W.J., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.1-220, 16 refs.  
Fast ice, Remote sensing, Ice conditions, Spaceborne photography, Mapping, Ice structure.
- 33-3480**  
Development of hardware and procedures for in-situ measurement of creep in sea ice.  
Shapiro, L.H., et al, Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.221-259, 13 refs.  
Hoskins, E.R.  
Sea ice, Ice creep, Ice strength, Ice elasticity, Viscoelasticity, Mathematical models.
- 33-3481**  
Operation of an Alaskan facility for applications of remote-sensing data to OCS studies.  
Belon, A.E., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.262-291.  
Data processing, Remote sensing, Photointerpretation, Aerial photography, Spaceborne photography.
- 33-3482**  
Circulation and water masses in the Gulf of Alaska.  
Royer, T.C., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.292-323.  
Ocean currents.
- 33-3483**  
Near-shore meteorology.  
Reynolds, R.M., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.324-568, Includes as appendices: Coastal meteorology in the Gulf of Alaska Icy Bay to Yakutat Bay by R.M. Reynolds et al; A look at wind conditions in lower Cook Inlet; Surface wind in some Alaskan coastal passes by G.P. Weber; Valdez wind forecast procedure by H.T. Knowles. 13 refs.  
Meteorology, Wind factors, Atmospheric pressure, Weather forecasting.
- 33-3484**  
Modeling of tides and circulations of the Bering Sea.  
Leendertse, J.J., et al, Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.570-579.  
Liu, S.-K.  
Ocean currents, Tidal currents, Models.
- 33-3485**  
Coastal meteorology of the Alaskan Arctic coast.  
Leavitt, E., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.580-606, 12 refs. Includes as an appendix: Progress on the sea breeze study on the Alaskan Arctic coast by T. Kozo.  
Wind (meteorology), Topographic factors.
- 33-3486**  
Characterization of the nearshore dynamics of an Arctic barrier island-lagoon system.  
Matthews, J.B., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.607-627, 16 refs.  
Offshore land forms, Meteorological factors, Water flow, Estuaries.
- 33-3487**  
Sediment characteristics, stability, and origin of the barrier-island complex, north Arctic Alaska.  
Naidu, A.S., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.628-686, 21 refs.  
Offshore land forms, Sediments, Chemical analysis.
- 33-3488**  
Environmental geology and geomorphology of the barrier island-lagoon system along the Beaufort Sea coastal plain from Prudhoe Bay to the Colville River.  
Cannon, P.J., Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.687-731, 12 refs.  
Offshore land forms, Tundra soils, Shore erosion, Ice cover effect.
- 33-3489**  
Oceanographic processes in a Beaufort Sea barrier island-lagoon system: numerical modeling and current measurements.  
Mungall, J.C.H., et al, Environmental assessment of the Alaskan continental shelf, Vol.10, Transport. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, Oct. 1978, p.732-834, 6 refs. Includes PI's quarterly report for period Jan.-Mar. 1978.  
Hann, R.W., Jr., Horne, D.J., Whitaker, R.E., Abel, C.E.  
Offshore land forms, Shoreline modification, Oceanography, Water transport, Ocean currents, Mathematical models.

Delineation and engineering characteristics of permafrost beneath the Beaufort Sea. Sellmann, P.V., et al, MP 1206, Environmental assessment of the Alaskan continental shelf, Vol.11, Hazards. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, 1978, p.50-74.

Chamberlain, E. Submarine permafrost, Bottom sediment, Boreholes, Temperature measurement.

Observations include determinations of subsea sediment temperature, type, ice content, and chemical composition. These data, coupled with geophysical studies and results from other Beaufort Sea geological studies, are being used jointly to ascertain subsea permafrost distribution. This report includes a summary of the spring 1977 field program and a general summation of the results from two years of field study in the Prudhoe Bay area. The 1977 field study produced six additional drilled and sampled holes plus 27 probe sites which yielded both material property and temperature data. The field observations and the results of laboratory analyses of the samples help to demonstrate the complex nature of subsea permafrost.

33-3594

Offshore permafrost studies, Beaufort Sea. Hopkins, D.M., et al, Environmental assessment of the Alaskan continental shelf, Vol.11, Hazards. Principal investigators' annual reports for the year ending March 1978, Boulder, Colorado, Outer Continental Shelf Environmental Assessment Program, 1978, p.75-146, Includes as appendixes: Microfossils—benthic foraminifera by K. McDougall; Ostracodes by E. Compton et al; Final report on pollen from borehole PB-2 and Modern pollen rain on the Chukchi and Beaufort Sea coasts, Alaska both by R.E. Nelson.

Hartz, R.W. Submarine permafrost, Boreholes, Temperature measurement, Thermokarst, Marine biology, Fossils, Pollen, Radioactive age determination.

**Meetings, Research projects, Antarctica.**

This volume comprises papers read at the 2nd All-Union Conference on Antarctic Research, commemorating the 20th year of Soviet activity and international cooperation in the Antarctic. The papers review the most significant findings in the last 20 years, their practical application in exploiting the polar areas, and the direction research should take in the future.

33-3620

**Soviet research in the Southern Ocean. (Itogi sovetskikh issledovaniĭ i Iuzhnom okeane, Treshnikov, A.F., Antarktika; doklady komissii, 1978, No.17, p.82-95, In Russian. 32 refs.**

**Sea ice distribution, Icebergs.**

A history of Soviet Antarctic Expedition work in the Southern Ocean in the last 20 years is given. Over this period 1,500 oceanographical sampling points were used, hundreds of thousands of miles covered by echo sounding, characteristics of surface circulation studied over 35,000 miles, and deep circulation investigated at 26 stations. Bottom sediments were sampled at more than 500 stations and more than 200 measurements taken of sediment depth. Biological studies include more than 4,000 plankton and 400 benthic probes. These data allowed the geographical limits of the Southern Ocean to be established, the frontal zones and bordering seas defined, water masses identified, icebergs classified, sea ice masses located and tracked, and both surface and deep water circulation more completely charted.

33-3621

**Glaciology in Antarctica on the eve of the 1980's. (Gliatsiologiya Antarktidy na rubezhe 80-kh godov XX v.).**

**Kotliakov, V.M., Antarktika; doklady komissii, 1978, No.17, p.111-124, In Russian. 14 refs.**

**Ice sheets, Glaciology, Antarctica.**

Antarctic glaciology in the last 10 years is reviewed. During this time there has been a shift from complex studies carried out by individual countries to international projects. The article discusses the major one: International Antarctic Glaciological Project—its aims, the area under study, methodology, the Soviet role, and main results to date. The disposal of radioactive waste by burying it in Antarctica is considered but rejected. Antarctic mass balance is estimated and some problems affecting precision of such estimates are discussed. The possibilities either of catastrophic collapse of the West Antarctic ice sheet or of massive surges are touched upon. Suggestions for further glaciological research in Antarctica are offered.

33-3622

**Paleogeology in Antarctica. (O probleme paleogeologii Antarktidy).**

**Bardin, V.I., Antarktika; doklady komissii, 1978, No.17, p.125-131, In Russian. 28 refs.**

**Paleoclimatology, Glaciation.**

The results of paleogeological research in Antarctica are reviewed. Studies of the complex of moraines of various ages in Victoria Land, Dronning Maud Land and Mac. Robertson Land have shown definite similarities in main glacial events among these regions and have proved that the East Antarctic ice sheet, at least after it reached its fullest extent, developed as one entity and underwent three great cyclical oscillations. Comparative lithological and morphological descriptions of moraines and glacial sediment dating have led to a correlation of the glacial events in various parts of Antarctica and to an understanding of the general course of East Antarctic Cenozoic glaciation.

33-3644

Present state and problems of the investigation of permafrost shores of reservoirs. Are, F.E., U.S. Army Cold Regions Research and Engineering Laboratory, Mar. 1979, TL 714, 13p., ADB-036 864L, 21 refs. Distribution limited to U.S. Government agencies only. For Russian original see 32-440. Reservoirs, Permafrost hydrology, Shore erosion, Shoreline modification, Thermokarst. With increasing development in Siberia has come increased use of natural lakes and construction of artificial lakes in permafrost terrain. The reworking of the shores of these water bodies through thawing of ice in the ground has become a significant engineering factor in their construction and utilization. The basic processes of shoreline reworking are thermokarst (erosion of the underwater part of the shoreline through the thermal and mechanical energy of moving water), thermokarst (subsidence of the lake bottom as a result of thawing), and the thermomodulation (action of thermal energy of the air and solar radiation on the abovewater part of the shoreline). The degree of reworking of shorelines depends greatly on the ice content of the soil, and determining this is difficult. Prediction of the reworking of frozen shorelines suffers from a lack of factual data on 1) the nature and rate of reworking, 2) the morphometry of the shore zone, and 3) the erodability of the permafrost material in different hydrological and geological conditions.

33-3645

Consolidation of cohesionless soils by blasting. Ivanov, P.L., U.S. Army Cold Regions Research and Engineering Laboratory, Mar. 1979, TL 713, 171p., ADB-036 863L, 68 refs. Distribution limited to U.S. Government agencies only. Translation of Izdatel'stvo literat'ury po stroitel'stvu, Leningrad, 1967, p.1-170. Soil stabilization, Soil compacting, Explosion effects, Blasting.

This book gives the basic precepts of the effects of an explosion on water-saturated soil and the processes which occur when cohesionless soil is consolidated, and it gives necessary data concerning the technology of blasting. It examines in detail the methods of consolidating cohesionless water-saturated soil by means of subsurface, surface and underwater blasting. Examples are given of the application of the method for consolidating aggraded sandy soil, the rock beds of harbor facilities, the foundations of hydraulic engineering works, the bases of power lines, and civil-engineering works. An evaluation is given of the area of application of the blasting method of consolidation, its efficiency and technical effectiveness as well as the methods for monitoring consolidation.

33-3646

Calculating the pattern of talik zones and steady temperature fields of rocks beneath water bodies of arbitrary form.

Balobaev, V.T., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1979, TL 712, 15p., ADB-036 862L, 10 refs. Distribution limited to U.S. Government agencies only. For Russian original see 29-1395.

Shast'evich, I.U.G.

Frozen rocks, Permafrost beneath lakes, Temperature effects, Taliks beneath lakes.

In areas where perennially frozen rock is present beneath a lake basin, talik zones are formed in the frozen strata. The talik zones have different depths and configurations and can be either enclosed or open. Their configuration depends on the surface temperature at the bottom of the lake, and other factors. Since the talik zones are often used as water supplies, for grounding power installations and other industrial purposes, it is necessary to be able to calculate their configuration. This paper presents a method for calculating the stationary temperature field of rock beneath a lake basin of any shape, which can serve as a basis for determining the configuration of the talik zones.

33-3647

Characteristics of the reshaping of shorelines of thermokarst lakes in central Yakutia.

Are, F.E., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1979, TL 711, 23p., ADB-036 861L, 8 refs. Distribution limited to U.S. Government agencies only. For Russian original see 29-1388.

Balobaev, V.T., Bosikov, N.P.

Thermokarst lakes, Shoreline modification, Shore erosion, Ice cover effect.

The reshaping of the shorelines of thermokarst lakes in Yakutia takes place primarily under the influence of the mechanical energy of waves. Thermal reconstruction of the shorelines is a function of the ice content of the shoreline rock and the water level in the lake. The shorelines of lakes in which the shore runs along the bottom of an alas are stable and can grow. Shorelines running along the slope of the edge of the alas, composed of an ice complex, undergo thermal restructuring leading to shoreline retreat. The intensity of this process does not exceed 1 meter annually.

33-3648

Thermophysical processes in the "frozen soil-water" system during the construction of dams from local materials.

Kuznetsov, A.L., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, TL 701, 17p., ADB-036 860L, 7 refs. Distribution limited to U.S. Government agencies only. For Russian original see 33-1715.

Pekhovich, A.I., Razzgovorova, E.L.

Earth dams, Frozen ground thermodynamics, Ice temperature, Soil freezing, Ground thawing.

In permafrost regions, characterized by harsh climatic conditions and difficult geological conditions with frozen ground, especially when earth which settles when warmed is involved, dams are constructed from local materials of the frozen type. The goal of this paper is to promote the development of a new technique for erecting dams under the conditions which exist in the Far North, using frozen soil without preliminary thawing.

33-3649

LandSat data collection platform at Devil Canyon site, upper Susitna Basin, Alaska—Performance and analysis of data.

Haugen, R.K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Feb. 1979, SR 79-2, 17 refs., ADA-068 508, 7 refs.

Tuinstra, R.L., Slaughter, C.W.

Data transmission, Remote sensing, LANDSAT.

In October 1974, a LandSat Data Collection Platform was installed near the prospective Devil Canyon damsite on the Susitna River, south central Alaska. The development of sensor interfaces and characteristics of transmitted data for air and ground surface temperature, windspeed and wind run, water equivalent snow accumulation, and battery voltage are discussed. Temperature data are analyzed statistically and compared with data from surrounding National Weather Service stations. Although some difficulties were encountered in operation during the winter of 1974-75, it was demonstrated that the LandSat data collection system could provide useful environmental data from a remote, subarctic location in the winter on a near-real-time basis.

33-3650

Effect of water content on the compressibility of snow-water mixtures.

Abele, G., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, CR 79-2, 26p., ADA-066 936, 6 refs.

Haynes, F.D.

Snow water content, Snow compression, Snow density, Snow deformation.

The stress-density relationships of snow-water mixtures were investigated and are shown as functions of water content, initial snow density, initial snow-water mixture density and rate of deformation. An increase in water content in snow at a par-

ticular density or a decrease in the rate of deformation (or strain rate) decreases the stress, but apparently not the specific energy required to reach a specific mixture density.

33-3651

Computer modeling of atmospheric ice accretion.

Ackley, S.F., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Mar. 1979, CR 79-4, 36p., ADA-068 582, 25 refs.

Templeton, M.K.

Ice accretion, Meteorological factors, Ice physics, Helicopters.

A computer model is described to compute the amount of ice accretion on an object under a variety of initial conditions. Numerical techniques are best applied to these problems because of time dependent effects governing the amount of ice collected and the variety of initial conditions that can lead to ice accumulation. The helicopter rotor icing problem adds an additional complexity since the velocity along the rotor blade varies over a wide range, strongly affecting the amounts of ice collected at different blade positions. The physics of ice accretion is reviewed, and the accounting for the time-dependence in the computer model is described. Some model results are presented and indicate the dependence of ice accretion on velocity, droplet sizes, cloud liquid water content, and temperature for a cylindrical object of constant size.

33-3652

New land reclamation equipment. (Novaya meliorativnaia tekhnika).

33-3653

High-water structures and regional forecasts of river discharge in the non-chernozem zone of the European USSR. (Struktura polovod'ia i territorial'nye prognozy vesennego stoka rek v nechernozemnoi zone evropeiskoi territorii SSSR).

Subbotin, A.I., Leningrad, Gidrometeoizdat, 1978, 98p., In Russian with English table of contents enclosed. 53 refs.

Floods, Flood forecasting, Rivers, Runoff, Ground water, Snowmelt, Snow water equivalent, Mapping, Charts.

33-3654

Fundamentals of deep roadbed stabilization. (Osnovy glubinnogo zakrepleniia gruntov zemliannogo polotna avtomobil'nykh dorog).

Volotskiĭ, D.V., Moscow, Transport, 1978, 119p., In Russian with English table of contents enclosed. 49 refs.

Roadbeds, Soil stabilization, Frost heave, Slope stability, Cements, Roads.

33-3655

Fundamentals of sagging ground mechanics. (Osnovy mekhaniki prosadochnykh gruntov).

Mustafaev, A.A., Moscow, Stroizdat, 1978, 263p., In Russian with English table of contents enclosed. 220 refs.

Fines, Loess, Soil moisture migration, Soil mechanics, Rheology, Foundations, Settlement (structural), Buildings, Deformation, Design.

33-3656

Summary reports prepared by principal investigators for the Bering Sea-Gulf of Alaska Geological Studies Review Meeting Jan. 31-Feb. 3, 1978, Menlo Park, California. *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3, c65 leaves. These reports, a part of OC-SEAP, are included as Appendix 1 to the Newsletter.

For selected report summaries see 33-3657 through 33-3663.

Research projects, Oil spills, Coastal topographic features, Geology, Sediments, Sea ice, Volcanoes, Earthquakes, Meetings.

33-3657

Coastal morphology, sedimentation and oil spill vulnerability—Gulf of Alaska project summary.

Hayes, M.O., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 5 leaves.

Ruby, C.H.

Coastal topographic features, Oil spills, Logistics, Countermeasures.

33-3658

Faults, unstable sediment masses, sediment distribution, and geochemistry of sediments, outer continental shelf, southern Bering Sea.

Vallier, T.L., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 8 leaves, 3 refs.

Gardner, J.V., Kvenvolden, K.A., Dean, W.E.

Marine geology, Sedimentation, Seismology, Chemical analysis.

33-3659

Yukon delta coastal processes study.

Dupré, W.R., *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 4 leaves.

Estuaries, Permafrost distribution, Fast ice, Coastal topographic features, Marine geology.

33-3660

Summary of the eastern Gulf of Alaska environmental program.

Molnia, B.F., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 9 leaves. Includes bibliography of project papers as of Jan. 29, 1978.

Carlson, P.R.

Bottom sediment, Marine geology, Geologic processes.

33-3661

Environmental geologic studies in northern Bering Sea.

Nelson, H., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 3 leaves, 7 refs.

Thor, D.R.

Marine geology, Sea ice, Ice scoring, Ocean currents, Bottom sediment.

33-3662

Sediment transport in Norton Sound, Alaska.

Cacchione, D.A., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 6 leaves, 2 refs.

Drake, D.E.

Sediment transport, Tidal currents.

33-3663

Coastal processes of the Bering Sea coast of Alaska. Sallenger, A.H., et al, *Bering Sea-Gulf of Alaska newsletter*, May 1978, Vol.3 (Appendix 1). Bering Sea-Gulf of Alaska Geological Studies Review Meeting, Jan. 1978, Menlo Park, Calif. Principal investigators' summary reports, 3 leaves.

Dingler, J., Hunter, R.E.

Marine geology, Shoreline modification, Ocean waves, Shore erosion.

33-3664

USA/USSR Symposium on recycling water supply systems and reuse of treated water at industrial plants, 5th, Moscow, Sep. 1977. Washington, D.C., U.S. Environmental Protection Agency, 1978, 64p., PB-289 865, English reprints of the 14 papers presented at the symposium.

Water treatment, Waste disposal, Sewage treatment, Meetings.

33-3665

Thermal conductivity of ice, water and steam.

Engineering Sciences Data Unit, London, England, 1978, 18p. ESDU-78039.

Thermal conductivity, Ice, Water, Steam.

33-3666

Risk assessment and health effects of land application of municipal wastewater and sludges. Proceedings of a conference held in San Antonio, Tex., Dec. 12-14, 1977.

Sagik, B.P., ed. San Antonio, University of Texas, 1977, 344p., PB-289 675, Numerous refs.

Ice shelves, Ice conditions, Seismic surveys, Ice cover thickness, Bottom sediment, Measuring instruments, Weddell Sea.  
Combined geophysical studies were carried out on board the *Explora* in the Weddell Sea and on the eastern Antarctic continental margin between 67S and 74.2S, 30W and 20E in Jan.-Feb. 1978. Preliminary results are reported on shelf ice conditions, profiles of continental shelf and coastline, using seismic exploration. Magnetic and gravimetric measurements, as well as seismic refraction soundings were performed. Sediments of the Princess Martha coast are briefly discussed.

McInnes, B.J.  
Ice sheets, Ice cover thickness, Ice volume, Glacier surges.  
A numerical model has been developed which simulates surging in certain glaciers and ice sheets in an apparently realistic manner. This model has been found to give close representations to a number of existing real-world temperate ice masses from small mountain glaciers to large sectors of ice caps. The model reproduces realistically many features of these ice masses such as the period of the surge, the duration, the velocity of advance, the magnitude of the advance, and the changes in ice thickness. The application of the model to the Antarctic ice sheet is made more difficult by the problem caused by the temperature dependence of the flow properties of ice. This means that for a complete study the interaction with the environment needs to be considered. However, preliminary calculations indicate a number of features that are relevant to the effect of Antarctic ice surges on the global climate. These include the period between surges, the duration of the surge, the amount of ice advanced and the changes in thickness of the ice sheet.

Comparative testing system of the applicability for various thermal scanning systems for detecting heat losses in buildings. Grot, R.A., et al, MP 1212, Infrared Information Exchange, 4th. Proceedings, St. Louis, Missouri, 1978, p.B71-B90, 18 refs.  
Munis, R.H., Marshall, S.J., Greator, A.  
Buildings, Heat loss, Thermal measuring instruments, Tests.
- A two-stage program for determining the applicability of various remote thermal scanning systems for detecting heat losses in buildings is described. The types of instruments tested are high resolution thermal imaging systems, low resolution thermal imaging systems, thermal line scanners and point radiometers. The first phase of this project consisted of inserting known building defects into a specially designed room at the USA Cold Regions Research and Engineering Laboratory and having a representative of the manufacturer of each type of equipment inspect the room at three temperature differences across the room envelope. The second phase of this project will consist of a field evaluation of these same instruments in approximately 10 cities, in cooperation with a weatherization program for low-income housing sponsored by the Community Services Administration and directed by the National Bureau of Standards. The goal of the second phase is to determine the cost effectiveness of various remote thermal scanning services.

Detecting wet roof insulation with a hand-held infrared camera. Korhonen, C., et al, MP 1213, Infrared Information Exchange, 4th. Proceedings, St. Louis, Missouri, 1978, p.A9-A15, 5 refs.  
Tobiasson, W.  
Infrared photography, Roofs, Moisture content, Detection.
- Since 1975, CRREL has used hand-held infrared scanners for detecting wet insulation under built-up roof membranes. Thermocouples installed on roofs have shown that temperature differences between areas of wet and dry insulation may exist during both the day and night. The optimum time to detect these differences with an infrared camera is at night when solar interference is eliminated. Surveys have been conducted successfully in many locations from Alabama to Alaska during both warm and cold weather. Three-inch diameter core samples of the roof membrane and insulation have been obtained to verify infrared findings. This paper briefly overviews the technique used to survey roofs for moisture and then presents results of a controlled experiment at Pease AFB, New Hampshire, to show the correlation between thermal images and temperature differences observed thermoelectrically in wet and dry portions of a roof. Measurements of the thermal resistance of the wet and dry areas complete the physical picture.

Studies on the ice sheet flow and local mass budget in Mizuho Plateau, Antarctica. Naruse, R., *Hokkaido Daigaku, Sapporo, Japan. Teion Kagaku Kenkyujo (Hokkaido University. Institute of Low Temperature Science. Contributions) Ser.A*, 1978, No.28, p.1-54, Refs. p.50-54.  
Ice sheets, Mass balance, Mass flow, Antarctica—Mizuho Plateau.
- Surveys of a triangulation chain 250 km in length were carried out in 1969 and 1973-1974 along the parallel of 72S in Mizuho Plateau, East Antarctica. Obtained from them were horizontal and vertical components of surface velocities of the ice sheet at 140 stations and parameters of surface strains at 140 triangles of the chain. Local mass budgets at the triangulation stations were deduced from vertical velocities and accumulation rates. General dynamic conditions over Mizuho Plateau were also discussed. Horizontal velocities were small near the Yamato Mountains, while they had a maximum of more than 20 m/a around 39E. The direction of the flow vector was, in general, identical approximately with that of the large-scale maximum slope of the ice surface. Tensile strains predominated mostly over compressive strains, and the direction of the maximum extension was rather close to that of the ice flow. Submergence velocities indicated large values, such as -0.7 to -1 m/a, in the region from 39E eastward. The amount of snow accumulation was not enough in this region to compensate for the deficit of the ice mass caused by the submergence flow. It followed that the local mass budget was negative there. It is suggested from this study that the ice sheet of Mizuho Plateau is in an unsteady state as a whole. (Auth.)

Drift, Ice conditions, Icebreakers, Sea ice, Antarctica—Balleny Islands.  
Ice conditions encountered by the Ob' in antarctic waters from Dec. 1971 to June 1972 are discussed. Information on ice conditions along the heretofore little known Marie Byrd Land coast is given and the effectiveness of icebreakers in this area assessed. Ice features in the Balleny ice field are described. Ice drift data for the Molodetsnaya Station area are presented and several characteristics of the antarctic ice regime in the fall-winter navigation season considered.

Temperature of the snow-firn layer. (Temperatura snezhno-firnovoi tolshchi). Khmelevskii, I.F., *Sovetskaiia antarkticheskaia ekspeditsiia. Trudy*, 1979, Vol.71, p.144-148, In Russian.  
Snow temperature, Firn, Antarctica—Queen Mary Coast.  
Temperature measurements were taken of the snow-firn layer down to 50 m in three cores drilled at points 49, 57, and 153 km from Mirny on a Vostok-Mirny profile. Temperature at the level below which seasonal temperature changes are not reflected (15 m) was -18.8, -19.3 and -27.7 C respectively. A negative temperature gradient—0.02, 0.03 and 0.015 C/m—was noted. The temperature regime reestablished itself within 5 or 6 days after drilling. Snow-firn layer temperatures drop about 0.8 C per 10 km distance from the coast and 0.9 C per 100 m of absolute altitude.

Some ecological and taxonomic observations on the colored snow algae found in Rumpa and Skarvnes, Antarctica. Akiyama, M., Tokyo. *National Institute of Polar Research. Memoirs*, 1979, No.11, Special issue, p.27-34, Refs. p.33-34.  
Colored snow, Algae, Antarctica—Skarvnes Foreland.  
Some ecological and taxonomic observations were made on the algae of colored snow found in Rumpa and Skarvnes, Antarctica. The recolored snow resulted from the accumulation of a red pigment in algae which was identified as an astaxanthin-like substance. The biomass of colored snow algae was in the range of 160,000-330,000 cells per ml of the melted water. The main components of colored snow algal flora were *Scotiella polyptera*, *Cryptocystis brevispina*, *Chlamydomonas* sp. and *Silicococcus bacillaris*. Cells of *Scotiella* were frequently coated with thin membrane resembling the primary membrane in some Volvoclean zygospores. (Auth. mod.)

Remote sensing, Lake water, Lake ice, Radar echoes, Ice cover thickness, Water supply.  
Results from using an impulse radar sounding system on the North Slope of Alaska to detect the existence of water under lake ice are presented. It was found that both lake ice thickness and depth of water under the ice could be determined when the radar antenna was either on the ice surface or airborne in a helicopter. The findings also revealed that the impulse radar sounding system could detect where lake ice was bottom-fast and where water existed under the ice cover.

Sea ice, Water temperature, Ocean currents, Air water interactions, Atmospheric circulation, Atmospheric disturbances, Air temperature, Bibliographies.  
The first attempt is presented to generalize on the atmosphere-ocean interaction to improve long-range weather forecasting and contribute to the development of a general theory of climate. Histories of traditional scientific trends in the discipline (such as studies of boundary layers, interaction mechanisms, thermal and dynamic interactions and their scale) and of new geographic approaches—general, region and typologic—are discussed.

Permafrost preservation, Thermal stresses, Human factors, Permafrost distribution, Damage.  
This report is based on a review paper presented at the Third International Conference on Permafrost held in July 1978 at Edmonton, Canada. It reviews the literature covering 1974-1978 and covers subjects related to natural and human induced disturbance of terrain underlain by permafrost. Subjects include investigations undertaken in conjunction with oil and gas pipelines, terrain mapping, methods for estimating terrain sensitivity, methods of protecting terrain, and the thermal effects of off road transportation, oil spills, fire, removal of the surface soil layers, snow conditions, mining and other construction practices. Methods of protecting and restoring permafrost in the USSR are presented in tabular form. An appendix summarizes results of modeling and microclimatic investigation, and the distribution and properties of subsea, land-based, and alpine permafrost.

Iceberg utilization.  
Job, J., *Aurora*, Spring, 1977, p.157-160.  
Icebergs, Economic development, Water supply, Iceberg towing.  
The prospect of transporting icebergs to south Australia for use as a fresh water source is examined. It is speculated that a large iceberg of some 5 sq km in top surface could be towed from the Amery Ice Shelf area to the southern coast of Australia in about 2 mo, with about half of its original mass remaining for conversion to water. Such an iceberg would contain enough water to supply a city of the size of Adelaide or Perth for 2 yr. The chief requirement for this task would be an appropriate towing force.
- A comparison of the energy requirements of iceberg towing and seawater desalination indicates that icebergs promise to be a much more economic source of water than desalination. The water would be suitable for domestic and industrial supplies, and perhaps for garden food crops. Feasible methods for protecting and towing the icebergs, and for converting them into water in storage are as yet undeveloped.

Mathematical models, Computerized simulation, Drift, Ice edge, Polynyas, Antarctica.  
The feasibility of calculating ice edge movement in polynyas is examined. A viscoelastic model of ice cover and additional integral models for atmospheric and oceanic boundary layers are formulated. For the estimated velocities of air and water, ice edge movement is determined; a combined Eulerian-Lagrangian system of coordinates was used.

Glacier flow, Glacier ablation, Meteorites, Wind factors.  
More than 1300 meteorites have been found recently on bare ice fields in Antarctica. This concentration might be explained by a mechanism which accumulates the meteorites fallen on the Antarctic ice sheet and carried along with the flow of ice to the continental margin. In front of mountains the ice flow is halted and the meteorites are exposed by wind ablation of ice. (Auth)

Waste disposal, Water treatment, Soil chemistry, Water chemistry.  
Runoff from spray application of secondary wastewater effluent on a forested hillside in West Dover, Vermont, was monitored for a six-week period (11 July-19 August 1977). Both quantity and quality of applied effluent and site drainage were monitored. On-site groundwater and two adjacent streams were sampled for water quality. Drainage flows were relatively constant during the study period in spite of highly variable inputs to the site. There is evidence that substantial quantities of water may be leaving the spray site by moving through the subsurface fragipan layer. On a mass basis, 95% of the total nitrogen, 96% of the ammonia nitrogen, 92% of the nitrate-nitrogen, 98% of the organic nitrogen, 99% of the total phosphorus, and 79% of the BOD<sub>5</sub> were removed by spray application. Heavy precipitation was observed to flush most nutrient forms, especially nitrate-nitrogen, from the spray site. Groundwater on the spray field contained lower concentrations of nutrients than did the applied effluent, but higher concentrations than those found in site drainage. No hazardous nitrate levels were detected in groundwater. No elevations of nutrient concentrations in the Deerfield River on Ellis Brook were detected during the study period. However, there was some evidence of increased chloride concentrations in Ellis Brook.

Frozen ground physics, Unfrozen water content, Nuclear magnetic resonance, Soil chemistry, Saline soils.  
A simple, rapid method of determining the unfrozen water content of frozen soils is described in detail. The method uses the first pulse amplitude of a pulsed nuclear magnetic resonance analyzer. Phase composition curves were obtained for four soils at very high total water contents. Three of the soils (Manchester fine sand, Fairbanks silt, and Goodrich clay) had been previously examined by another method (isothermal calorimeter). The fourth (Kotzebue silt) is a naturally saline soil found in low-lying coastal regions of Alaska. This soil was tested both in its natural state and with the soluble salts removed. The phase composition curves obtained by the nuclear magnetic resonance method are consistent with those obtained by using the isothermal calorimeter, but the nuclear magnetic resonance method saved time, requiring only 48h. It also provides a high degree of reproducibility and can be used over a wide range of temperatures. As expected, the unfrozen water content of the saline soil was much higher in its natural state than after removal of the soluble salts. In addition, the unfrozen water content of all four soils appears to increase somewhat as the total water content of the sample is increased.

Submarine permafrost, Drill core analysis, Penetration tests, Permafrost depth.  
The occurrence and properties of subsea permafrost near Prudhoe Bay, Alaska, were investigated by drilling and probing. Nine holes were drilled and 27 sites were probed with a cone penetrometer. The deepest drill hole was 65.1m below the seabed, while a depth of 14.1 m was reached with the cone penetrometer. Engineering and chemical properties were determined from core samples and point penetration resistance data were obtained with the penetrometer. Thermal profiles were acquired at both the drill and probe sites.

Glaciological research at Mizuho Station, Antarctica, in 1977.  
Fujii, Y., *Japanese Antarctic Research Expedition. JARE data reports*, Mar. 1979, No.48, 196p., 3 refs.  
Glaciology, Research projects, Antarctica—Mizuho Station.  
This volume contains glaciological and meteorological data obtained at Mizuho Station from January 25, 1977 to January 31, 1978, and during five resupply trips to Mizuho from Showa in January-February, April-June, August-September, October-November 1977 and January-February 1978. Snow temperature data at Mizuho Station obtained from July 1974 to January 1975, which have never been published before are also given. Included are the following data: net accumulation, snow surface conditions, snow temperature, mass flux of drifting snow and surface meteorological data obtained during traverses in 1977. The data related to heat balance studies and the stratigraphic analyses of the cores will be published later in the JARE Data Reports. (Auth. mod.)

River ice, Ice mechanics, Ice pressure, Fluid mechanics.  
The emphasis is on the fluid mechanical aspects of river ice including the areas of formation, evolution, and breakup of ice covers, hydraulics associated with the presence of ice, thermal effects and interactions with ice, and forces due to ice. River ice processes may be summarized as a series of steady states that exist between short periods of intense activity and change.

Glacier mass balance, Glacier movement, Velocity measurement, Ice temperature, Sediments, Antarctica—Taylor Glacier.  
This note summarizes the sedimentation patterns and glacier dynamics, mass budgets and temperature variation for Taylor Glacier, with a brief outline of the usefulness of this in paleoclimatic interpretations. It is concluded that Taylor Glacier has produced "wet based" glacial sediments for some time. The wet base is suitable for the incorporation of basal debris, and the constant output of wet based sediments over the last 6000 yr implies that climate variation has had little effect on the basal thermal regime of the larger outlet glaciers.

Ice cores, Ice composition, Ice dating, Chemical composition.  
A chemical method of accurately dating polar ice cores has been developed to evaluate the hypothesis that fluctuations in the nitrate concentration in polar precipitation provides a record of the variation of solar activity through time. Analyses of pieces of the 952 m Vostok core indicate that under the conditions found in the East Antarctic ice sheet ( $-56^{\circ}\text{C}$ ), nitrate appears stable for at least 50,000 yr. The data are of a very preliminary nature. Contamination is a significant factor in the chemical analysis of ice cores.

Truesdale, R.S., Osterman, L.E.  
Ice sheets, Drill core analysis, Marine biology, Glacial geology, Marine geology, Antarctica—Ross Sea.  
Ross Sea cores contain diatom floras and have sediment characteristics which suggest that grounded ice filled the Ross Sea embayment to the continental shelf margin during the last, and previous, glacial advances. Each successive advance reworked sediments from the previous interglacial period with older material and compressed them into a firm deposit with reworked (mixed and fractured) microfossils. As the grounding line retreated past each core location, subglacial meltwater, tidal pumping, and marine bottom-water flow winnowed light, less heavily silicified diatoms, leaving a lag of *Eucampia balaustrum* in well-sorted, sandy sediment. Warm-water, open-marine conditions initially prevailed after deglaciation on the northern part of the continental shelf during summers. Open-marine conditions were gradually replaced by the pack-ice cover that today characterizes the Ross Sea continental shelf region. (Auth.)

Report of decommissioning of the PM-3A Nuclear Power Plant, McMurdo Station, Antarctica. (Foster, M.E., et al, Port Hueneme, California, Naval Nuclear Power Unit, Feb. 1979, var. p., Unpublished manuscript. Refs.  
Jordan, N.M.  
Nuclear reactors, Soil pollution, Radiation, Radioactive wastes, Ice composition, Impurities, Waste disposal, Antarctica—McMurdo Station.  
The PM-3A Nuclear Power Plant, operated from 1962 to 1972 by the Navy under a Memorandum of Understanding between the Atomic Energy Commission and the Department of Defense, has been dismantled and removed from Antarctica, and the site has been decontaminated to levels as low as reasonably achievable. Removal of the plant components and surrounding low-level contaminated rock from the continent was considered prudent in view of the provision in Article V of the Antarctic Treaty that states "...the disposal there of radioactive waste material shall be prohibited". This report shows that the concentrations of man-made radionuclides remaining on the site would result in a radiation dose less than 15 millirems per year as an upper limit or 6 millirems per year as a most probable value. These low doses are the result of the extremely low levels of radionuclides (averaging 8 picocuries per gram of crushed rock for cesium-137, and even less for the other nuclides—cesium-134, cobalt-60, and strontium-90) and the lack of any significant pathway to man in the antarctic environment. The report concludes that the PM-3A decommissioning is complete, and the site may be released for unrestricted use in accordance with United States standards. For individual abstracts see G-14738, G-20496, and G-21855 through G-21857, or 33-4035 and 33-4036. (Auth.)

**Radiological survey of the PM-3A site: Volume 1. Final report.**

Jentz, T.L., Rockville, Maryland, NUS Corp., June 1978, 165p., Unpublished manuscript.

**Nuclear reactors, Soil pollution, Radiation, Ice composition, Radioactive wastes, Impurities, Waste disposal, Antarctica—McMurdo Station.**

A complete radiological survey was performed at the PM-3A site at McMurdo Station. This survey included the measurement of soil contamination levels, radiation levels, contamination levels and airborne radioactivity levels. Samples of soil, water and crud were collected for laboratory analysis. The results are presented in charts and graphs. All the TLD environmental packets recorded an equivalent exposure of less than 500 mrem per yr due to reactor produced by-product material. All removable contamination levels in and on the buildings were less than 1000 dpm/100 sq cm. Airborne radioactivity levels in and around the facility were well below the acceptable concentrations in air above natural background for unrestricted areas. Water and ice samples were collected at five locations. Highest tritium levels were found in ice samples collected in the area where liquid radioactive waste was discharged during plant operation.

33-4036

**Radiological survey of the PM-3A site: Volume 2. Final report: Appendix.** Rockville, Maryland, NUS Corp., June 1978, 85p., Unpublished manuscript.

**Nuclear reactors, Soil pollution, Radiation, Ice composition, Impurities, Waste disposal, Antarctica—McMurdo Station.**

This appendix to the radiological survey of the site on which the McMurdo Station nuclear reactor once stood sets forth the procedures for analysis of soil, air particulates, water and crud. A procedure for routine acquisition and processing of gamma-ray spectra using the Ge(Li) detector system is also described. The correct method for reporting results and for checking performance of counting equipment is outlined. Specifications and calibration for the following types of survey equipment are given: PRM-7, Micro-R Meter; PRM-5-3 with SPA-3; PRM-4A or PRM-6 with HP-210 pancake detector; BC-4, beta counter; SAC-4, alpha scaler; and RAS-1, air sampler.

**Sea ice, Pack ice, Ice shelves, Ice conditions, Air water interactions.**

This book is concerned with interactions between the atmosphere and the oceans and with the interdependence of atmospheric and oceanic circulation. It is intended as a text for second and third year undergraduates in the fields of geography, geophysics, environmental science, marine biology, and nautical studies. The book contains six chapters covering the following topics: the principal features of the ocean-atmosphere system, oceanic macro-circulations, the action of wind on the sea, ocean-atmosphere heat exchange, the thermal behavior of the ocean-atmosphere system and climatic responses, and various international projects and numerical models. The chapter on ocean macro circulations contains discussions on ice conditions, the formation of bottom water, and the significance of deep-water circulations in the Southern Ocean.

**Past and present day tropospheric fallout fluxes of Pb, Cd, Cu, Zn and Ag in Antarctica and Greenland.** Boutron, C., *Geophysical research letters*, Mar. 1979, 6(3), p.159-162, 24 refs.

**Fallout, Aerosols, Snow composition, Ice composition, Chemical composition.**

Estimates of the present day tropospheric fallout fluxes of Pb, Cd, Cu, Zn and Ag in the central areas of Antarctica and Greenland are calculated from the measured concentrations of these elements in the deposited snow. The fluxes obtained are higher by one to two orders of magnitude in Greenland, probably largely because of the different geographical locations and meteorological regimes of Greenland and Antarctica. The variations of these fluxes during the last century suggest that the present day enrichments of these five metals in tropospheric aerosols in remote areas are not influenced significantly by human activity, but may be for a small part for Pb and Zn in the Northern Hemisphere, and are therefore linked to natural processes. (Auth.)

**Snow gages, Wind factors, Wind velocity, Snowdrifts, Antarctica—Mizuho Station.**

This paper describes the results of snow drift measurements made on a slope near Mizuho Camp where katabatic winds prevail. A handy collector, a chest with ten drawers, was devised, to measure the amount of drifting snow under severe conditions in Antarctica. Called a drawer-type collector, it has a collection efficiency of about 0.23 and measures mass fluxes at ten levels up to 1 m above the snow surface at one time. A maximum total drift transport was obtained at each place by integrating the measured and extrapolated mass fluxes from the lowest level to the height of 10 m, as given by an empirical

formula. Using the distribution of wind speed and the relative frequencies of occurrence of drifting and blowing snow at Mizuho Camp and its vicinity, the actual amount of snow transported across a cross-slope line of 1 km in width was obtained, which was about 1 billion kg/km/yr.

**Permafrost beneath structures, Permafrost control, Thermopiles.**

33-4052

**Application of the reliability theory to the calculation of thermal and mechanical interaction of buildings and structures with permafrost bases.** (Primenenie teorii nadezhnosti k raschetu teplovogo i mekhanicheskogo vzaimodelstviia zdaniia i sooruzhenii s vechnomerzlyimi osnovaniami).

Khrustalev, L.N., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.63-70, In Russian. 10 refs.

Mirenburg, I.U.S.

**Buildings, Permafrost bases, Pile foundations, Active layer, Design.**

33-4053

Calculation of a circular foundation on a plastic frozen base. (Raschet krugovogo v plane fundamenta na plastichno-merzlo osnovanii), Slepak, M.E., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.70-74, In Russian. 8 refs.

Foundations, Permafrost beneath structures, Bearing strength, Settlement (structural), Creep properties.

33-4054

Influence of the material and surface roughness of piles on the frozen ground resistance to shear at lateral surfaces. (Vliianie materiala i sherokhovatosti bokovoi poverkhnosti sval na soprotivlenie sdvigu po nei merzlykh gruntov), Gerasimov, A.S., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.74-77, In Russian. 8 refs.

Dokuchaev, V.V.  
Pile foundations, Permafrost beneath structures, Concrete piles, Surface roughness, Reinforced concrete.

33-4055

Designing foundations of heavy industrial buildings for perennially frozen grounds of West Yakutia. (Osobennosti fundirovaniia tiazhelykh proizvodstvennykh zdaniĭ na vechnomerzlykh gruntakh Zapadnoi IAKutii), Gur'ianov, I.E., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.78-81, In Russian. 5 refs.

Industrial buildings, Foundations, Permafrost beneath structures, Permafrost structure, Ground ice, Bearing strength.

33-4056

Duration of slurry freezing around piles. (Prodolzhitel'nost' smerzaniia grunta so svaiami), Maksimov, G.N., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.81-88, In Russian. 6 refs.

Gavrilov, I.U.E., Khvorostovskaya, N.S.  
Pile foundations, Permafrost beneath structures, Pile driving, Frozen ground temperature, Ground thawing, Heat transfer.

33-4057

Using low-boiling fluid thermopiles as supporting structures. (Ispol'zovanie parozhidkostnykh termosval v kachestve opornykh konstruktiv sooruzhenii), Vialov, S.S., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.88-95, In Russian.

Pile foundations, Supports, Thermopiles, Permafrost beneath structures, Permafrost control.

33-4058

Methods of calculating the stability of tailings in polar regions. (Osobennosti otvalov v Zapoliar'e i metod rascheta ikh ustoiichivosti), Gorodetskii, S.E., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.95-100, In Russian. 5 refs.

Pekarskaia, N.K.  
Mining, Tailings, Slope stability, Cryogenic slope processes, Solifluction.

33-4059

Use of foam plastics in construction on permafrost. (Primenenie penoplastov v stroitel'stve na vechnomerzlykh gruntakh), Ivanov, V.N., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.100-104, In Russian.

Kravchuk, I.I.  
Buildings, Foundations, Pavements, Roads, Airports, Thermal insulation, Cellular plastics, Permafrost beneath structures.

33-4060

Regionalization of permafrost areas according to construction conditions. (Opyt stroitel'nogo racionirovaniia territorii s mnogoletnemrzymymi gruntami), Sukhodol'skii, S.E., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.104-108, In Russian.

Khrustalev, L.N.  
Permafrost distribution, Frozen fines, Thermokarst, Cryogenic slope processes, Mapping, Construction costs.

33-4061

Crystallization of supercooled water and formation of the crystallization electric potentials in some aqueous solutions. (Kristallizatsiia pereokhlazhdennoi vody, vzniknovenie kristallizatsionnykh elektricheskikh potentsialov v nekotorykh vodnykh rastvorakh), Kachurin, L.G., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.109-115, In Russian. 24 refs.

Supercooled water, Phase transformations, Ice nuclei, Crystallization, Electric potential, Bibliographies.

33-4062

Ice failure under short-term creep conditions. (Razrushenie l'da v usloviakh kratkovremennoi polzuchestii), Zaretskii, I.U.K., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.115-127, In Russian. 6 refs.

Ice strength, Loads (forces), Creep properties, Ice crystal structure, Ice crystal size.

33-4063

NMR technique of studying phase composition of water in frozen fines. (Nekotorye rezul'taty issledovaniia fazovogo sostava vody v merzlykh tonkodispersnykh gornykh porodakh metodom IAMR), Ananian, A.A., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.128-133, In Russian. 10 refs.

Volkova, E.V., Golovanova, G.F.  
Frozen fines, Clays, Unfrozen water content, Phase transformations, Nuclear magnetic resonance.

33-4064

Shear strength of frozen slurry at the contact with a high ice content ground. (O soprotivlenii sdvigu merzlogo gruntovogo rastvora na kontakte s sil'noi distym gruntom), Sadovskii, A.V., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.133-137, In Russian. 4 refs.

Tikhomirov, S.M.  
Pile foundations, Permafrost beneath structures, Ground ice, Shear strength.

33-4065

Experimental study of moisture transfer in porous rocks during freezing. (Eksperimental'noe izuchenie migratsii vlagi v poluskal'nykh gornykh porodakh pri ikh promerzaniĭ), Vasil'ev, A.A., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.137-141, In Russian. 3 refs.

Zil'berbord, A.F.  
Frozen rocks, Porosity, Moisture transfer, Frost penetration.

33-4066

Studying moisture migration near the frost penetration boundary. (Issledovanie migratsii vlagi vblizi granitsy promerzaniia), Chistotinov, L.V., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.141-145, In Russian. 2 refs.

Soil freezing, Frost penetration, Soil moisture migration, Phase transformations, Frozen ground temperature, Unfrozen water content.

33-4067

Ice formation under pressure in natural conditions. (Ledobrazovanie pod davleniem v prirode), Pekhovich, A.I., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.145-149, In Russian. 3 refs.

Razgovorova, E.L.  
Pngos, Ice veins, Ice formation, Soil formation, Soil pressure, Naleds, Ice pressure, Ice growth.

33-4068

Unfrozen water in frozen rocks. (Nezamerzshaia voda v merzlykh gornykh porodakh), Akimov, I.U.P., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.149-152, In Russian. 9 refs.

Cheverev, V.G.  
Frozen rocks, Cryogenic structures, Porosity, Moisture transfer, Unfrozen water content.

33-4069

Studying the possibility of using saline perennially frozen grounds as bases for buildings and structures. (Issledovaniia zasolennykh vechnomerzlykh gruntov v tseliakh ikh ispol'zovaniia v kachestve osnovanii zdaniĭ i sooruzhenii), Velli, I.U.IA., et al, Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.152-163, In Russian. 7 refs.

Aksenov, V.I.  
Buildings, Permafrost bases, Saline soils, Ground ice, Frozen fines, Foundations, Frozen ground temperature, Bearing strength.

33-4070

Influence of loading conditions on mechanical properties of frozen ground. (Vliianie rezhima zagruzheniia na mekhanicheskie svoistva merzlykh gruntov), Pekarskaia, N.K., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Mel'nikov, Novosibirsk, Nauka, 1979, p.163-174, In Russian. 16 refs.

Frozen fines, Frozen ground mechanics, Ground ice, Deformation, Frozen ground strength, Creep properties, Impact tests, High pressure tests.

- 33-4071**  
New method of determining mechanical properties of permafrost under natural conditions. (Novyi metod opredeleniia mekhanicheskikh kh. i kriteristik vechnomerzlykh porod v usloviakh estestvennogo zaleganiia). Kubetskii, V.L., Inzhenernoe merzlotovedenie. Materialy k III Mezhdunarodnoi konferentsii po merzlotovedeniiu (Engineering geocryology. Papers prepared for the 3rd International Conference on Permafrost) edited by P.I. Heat transfer, Channels (waterways), Ice water interface, Turbulent flow, River flow, Ice cover effect, Mathematical models, Water temperature.  
Heat transfer in turbulent flow was measured in a rectangular channel with a width of 0.254 m and a flow depth of 0.0254 m. Correlations between the Nusselt and Reynolds numbers are given for a range of  $302 \times 1000$  is less than  $Re$  is less than  $2.236 \times 10,000$ . A Prandtl number range of 9.90 is less than or equal to 12.28 for water was used in the tests. The results are compared with those of other investigations and show that some well-known correlations underpredict the heat transfer by about 35%.

Accelerated ice growth in rivers. (Calkins, D.J., *U.S. Army Cold Regions Research and Engineering Laboratory*, May 1979, CR 79-14, 5p., ADA-071 015, 5 refs.  
Frazil ice, River ice, Ice growth, Ice cover thickness, Heat transfer, Slush, Porosity, Mathematical models.  
Solid ice growth rates due to the presence of frazil slush beneath the ice cover have been shown to be greater than the so-called static growth. The frazil slush reduces the effective heat of ice solidification and the frazil particles freeze into the interstitial water. Numerical schemes are presented which clearly show the effect of frazil ice porosity on ice cover growth rates and the numerical model using air temperature as the major input is compared with field data on ice thickness in a small river laden with frazil ice beneath its cover.

Gow, A.J.

Ice sheets, Glacier flow, Ice cores, Ice crystal structure, Ice acoustics, Anisotropy, Wave propagation, Ultrasonic tests, Ice crystal size, Shear properties, Antarctica—Byrd Station, Antarctica—Little America Station.

Ice cores from Byrd Station and Little America V have been used to test an ultrasonic technique for evaluating crystal anisotropy in the Antarctic Ice Sheet. P-wave velocities measured parallel and perpendicular to the vertical axes of cores from the 2164-m-thick ice sheet at Byrd Station have yielded results in excellent agreement with the observed c-axis fabric profile and with the in-situ P-wave velocity profile measured parallel to the bore hole axis. Velocity differences in excess of 140 m/s for core samples from deeper than 1300 m attest to the strong single pole clustering of crystallographic c-axes about the vertical, especially in the zone from 1300-1800 m. Such oriented structure is compatible only with strong horizontal shearing in the zone. The existence in an ice sheet of widespread shearing several hundred meters above its bed raises serious questions as to the validity of current concepts of the flow of large ice masses that tend to gloss over or ignore crystal alignments of this magnitude. The ultrasonic technique has proven to be a fast and powerful tool for determining crystal fabrics in ice sheets. Results from Byrd Station and Little America V, together with fabric data from several other locations in East Antarctica, suggest that crystal orientations within the Antarctic Ice Sheet tend to be characterized by either single or multi-pole clustering of c-axes about a vertical symmetry axis.

Sea ice ridging statistics obtained from a series of laser surface roughness profiles are examined. Each set of profiles consists of six 200-km-long flight tracks oriented approximately perpendicular to the coastline of the Chukchi and Beaufort Seas. The flights were made in February, April, August, and December 1976, and one additional profile was obtained north of Cross Island during March 1978. It was found that although there is a systematic variation in mean ridge height (h) with season (with the highest values occurring in late winter), there is no systematic spatial variation in h at a given time. The number of ridges/km is also high during the late winter, with the highest values occurring in the Barter and Cross Island profiles. In most profiles, the ice 20 to 60 km from the coast is more highly deformed than the ice either nearer the coast or farther seaward. The Wadhams model for the distribution of ridge heights gives better agreement with observed values in the higher ridge categories than does the Hubler model. Estimates of the spatial recurrence frequency of large pressure ridges are made by using the Wadhams model and also by using an extreme value approach. In the latter, the distribution of the largest ridges per 20 km of laser track was found to be essentially normal. Wadhams' distribution consistently predicts slightly larger ridge sails than does the extreme value approach.

This report summarizes energy requirements for small wastewater treatment systems (0.05 - 5 million gallons per day) applicable to military installations. It compares various treatment combinations, and presents the energy requirements for the most viable alternatives in tabular form. It also presents energy requirements for various components of wastewater treatment systems in a format making it convenient to calculate the energy requirements for many combinations of the components. In addition, it summarizes briefly energy estimates made by others. The report compares typical combinations of unit operations and processes used to produce various quality effluents on the basis of energy consumption. It concludes that land application systems are the most energy-efficient wastewater treatment systems and that they are capable of producing an equivalent or higher quality effluent than any other treatment system.

- 33-4240**  
Ice impairs operation of helicopters and other aircraft, antennae, power and communication lines, shipping and superstructures, canal locks, etc. Prevention or easier removal of icing requires reduction of its adhesion strength. Literature study shows that adhesion results from secondary (van der Waals) forces yet exceeds normal cohesive strengths. It depends on free surface energy, low contact angle, good contact and wetting, cleanliness, and texture. Modes of adhesion testing are briefly discussed. Poor adhesion occurs with low energy surfaces or contaminants, e.g. hydrocarbons, fluorocarbons, waxes, oils, etc., particularly when textured or porous. The resulting low contact angle, poor wetting and occlusion of air at the interface weaken the bond or provide stress loci which can initiate cracks and failure. Coefficient of expansion differences may help in release of ice. Further ideas appear among the 100 abstracts presented. A survey of over 300 manufacturers produced over 100 replies. Half of them offered some 100 products deemed worth testing. These are listed with addresses and contacts. Besides simple resins and other release agents, they include composites which combine low surface energy and stronger materials as micro-mixture, interpenetrating-network, "plastic-alloy," or filler-matrix systems. About 15 to 20 products appear of special interest. Samples of liquid coating or supplier-prepared panels of many are available for the testing phase to follow.

Permafrost physics, Permafrost structure, Ground ice, Ice wedges, Soil strength, Electromagnetic prospecting, Geophysical surveys, Seasonal freeze thaw. Road construction activity near Fairbanks, Alaska, in the late fall of 1977, revealed a large exposure of Fairbanks silt containing numerous massive ice features. These exposures are typical of those found in this region. Thaw, during the summer of 1978, caused the upper ice-rich sections to retreat several meters. Geophysical techniques were utilized over these exposures to determine if resistive anomalies of ice wedge dimension could be detected. Magnetic induction measurements at three intercoil spacings and low-frequency surface impedance measurements were made about 6 m from the edge of each exposure in April 1978 before thaw commenced. The results agree well with observations of the layering, but most individual anomalies are difficult to interpret because the lateral extent of the ice is unknown.

- 33-4245**  
Before constructing actual highway pavements with open-graded drainage layers, frost penetration depths and moisture content profiles were measured beneath several pavements in New Jersey. Air and surface freezing indexes were measured at three locations during the 1975-1976 and 1976-1977 winters. All freezing indexes were considerably greater during the 1976-1977 winter. The modified Deggren equation was used to compute the maximum frost depth at 30 test sites. Measured maximum frost depths ranged from 20.5 in. to 52.0 in., while computed maximum values ranged from 14.0 in. to 61.0 in. The mean difference between observed and computed maximum frost penetration depths was 3.8 in. Maximum frost penetration depths were computed for hypothetical pavements with open-graded drainage at four of the test sites. It was concluded that open-graded drainage layers would not significantly change the frost penetration beneath highway pavements in New Jersey. It was recommended that test pavements be installed to verify the computations.

The roofs and upper story walls of buildings 745E, 752, and 756 at the U.S. Military Academy, West Point, New York, were surveyed with a hand-held infrared camera to locate sources of reported wall leaks. An electrical resistance probe was used to determine the relative level of moisture in wall components. Several 3-in.-diam core samples of each roof were obtained to verify suspected moisture conditions and to examine the roof membrane in cross section. Wet areas on each roof were outlined with white spray paint. Wall leaks are believed to be caused by wind-driven rain entering the parapet walls in locations where the decorative glaze-coat has spalled off. Recommendations for maintenance of these buildings are based on information derived from the infrared survey, electrical resistance readings, core samples and visual examinations.

- 33-4251**  
A series of laboratory and field tests was conducted to investigate the possibility that nitrification could be useful as a nitrification inhibitor in land treatment of wastewater. Laboratory tests included soil incubation and soil column studies. Variables were soil type, temperature, nitrification concentration and method of application to the soil. Experimental designs included two soils, three temperatures (0, 10 and 20°C) and three levels of inhibitors in a complete factorial. Forage grasses were present in all treatments, and wastewater containing NH4-N was utilized. Weekly application of wastewater was 5 cm. Soil solution at depth and leachate at 160 cm were collected and analyzed weekly for NH4-N and NO3-N. That data indicate that nitrification was not effective in inhibiting nitrification when applied to the soil surface in soil columns simulating land treatment slow infiltration. The ineffectiveness of the compound under a mode of application where it is mixed and sprayed with wastewater is thought to be due to its volatility, sorption by organic matter, low water solubility and its immobility in soils. Other chemicals such as carbon disulfide and thiocarbonates, which have different characteristics than the nitrification, showed promising results. Research is under way to obtain conclusive data.

- 33-4254**  
Results of extensive studies of earth resistivities of low temperature soils are presented. Ground measurements of the electromagnetic field components of radio waves propagated at low frequencies from distant transmitters and of the inductive coupling between two loop antennas are described. Results of measurements by these methods are compared with each other and with actual findings from excavations and borings at permafrost sites. The measurements are shown to provide data on locations of lens ice, indicate zones of thawing, give indications which permit estimating resistivities of layers and permit construction of a map of Alaska identifying major resistivity zones. Airborne evaluation of remotely propagated waves permits con-

struction of resistivity contour maps. Reasons for variations in resistivity among various categories of frozen soils are discussed.

Meetings, Ice sheets, Ice shelves, Sea ice, Glacier mass balance, Ice mechanics, Spacecraft, Surveys.

A report on the August 1978 meeting of the International Glaciology Society in Ottawa is presented. Brief critical remarks are made of each session; much valuable work was devoted to the West Antarctic ice sheet. The proceedings will be published as one issue of the *Journal of glaciology*.

33-4246

Some features of the turbulent transfer on the bare ice field near the Yamato Mountains, East Antarctica.

Kobayashi, S., *Tokyo. National Institute of Polar Research. Memoirs*, Mar. 1979, Special issue No.12, p.9-18, 15 refs.

Glacier ablation, Turbulent flow, Wind factors, Ice air interface, Antarctica—Shirase Glacier, Antarctica—Yamato Mountains.

Measurements were made of profiles of wind speed and air temperature on the bare ice surface on the lee of the Yamato Mountains from Dec. 1-7, 1973. The vertical profile of air temperature was found unstable in the daytime when the wind speed decreased, as the bare ice surface was heated by solar radiation. Consequently, a mean eddy heat flux transported from the surface was 50 ly/day. As for an energy budget, estimated latent heat flux was about 150 ly/day, which indicates the evaporation of 0.25 cm/day in the summer. The observations of wind turbulence by the use of sonic anemometer showed a strong turbulence generated by nunataks. This strong turbulence contributes to the surface ablation of bare ice in the summer. (Auth.)

33-4247

Dynamical features of the Meteorite Ice Field, Antarctica.

Naruse, R., *Tokyo. National Institute of Polar Research. Memoirs*, Mar. 1979, Special issue No.12, p.19-24, 14 refs.

Glacier ablation, Glacier flow, Glacier heat balance, Antarctica—Yamato Mountains.

Results of the glaciological work done in 1969 and 1973-1974 near the Yamato Mountains showed that the dynamic features of the southern Meteorite Ice Field (bare ice) were quite different from those of the ice sheet in the Shirase drainage, East Antarctica. In the ice field ice flowed toward the Yamato Mountains with the small horizontal velocity of less than 2 m/year; the vertical movement of ice indicated the emergence velocity of 5 cm/year on the average, and the ablation rate amounted to 5 cm/year in water equivalent. Whether the concentration of meteorites within a limit is possible, in

terms of a mass budget study in the present drainage system, is also discussed. The result revealed that, if a number of meteorites had once fallen uniformly over the hinterland of the drainages of the Shirase Glacier and of the Meteorite Ice Field, more than 95% of the meteorites were drained off through the coast of the ice sheet, and only a few percent of them were conveyed to and exposed on the bare ice field around the Yamato Mountains. (Auth.)

33-4248

Temperature profile in the bare ice area near the Yamato Mountains, Antarctica.

Nishio, F., et al, *Tokyo. National Institute of Polar Research. Memoirs*, Mar. 1979, Special issue No.12, p.25-37, 22 refs.

Mac, S.

Glacier ablation, Ice temperature, Ablation, Ice sheets, Antarctica—Yamato Mountains.

The temperature profile of the ice sheet in the bare ice area (Meteorite Ice Field) near the Yamato Mountains (72S, 36E) was calculated on the basis of the heat conduction theory under steady state conditions. The effect of geothermal heat flux, vertical velocity of ice mass and ice thickness on temperature profile was examined. Analysis of the profile in past stages of ice sheet fluctuation showed that before the Fukushima ice stage (about 10,000 years B.P.) upward velocity and ablation rate were approx zero, or the downward motion of ice mass and accumulation might have occurred. This result is completely different from the present state (upward velocity 5 cm/year and ablation rate 5 cm/year), which suggests that most of the Yamato meteorites collected in 1969-1975 were exposed on the surface of the area after the Fukushima stage. (Auth.)

Antarctic Journal of the United States, Vol.14, No.2. U.S. National Science Foundation, Washington, D.C., Mar. 1979, 11p.

Ice shelves, Drilling, Thermal drills.

This issue contains articles on the new Siple Station, drilling through the Ross Ice Shelf, airborne research, the 1978 U.S. antarctic population, NSF funds awards for Oct. 1 to Dec. 31, 1978, a monthly climate summary, and special news announcements. The new Siple Station will house eight men during the coming austral winter and is expected to function as a year-round U.S. research platform until the late 1980's before needing replacement. Three holes were melted through the Ross Ice Shelf at Site J-9 during the final drilling season, using the Browning hot water drill. The operations and observations are described. Ice core obtained at the site by Soviet drillers, using thermal drills, is also described. The 1978 U.S. antarctic population varied from 112 to 1,064. The numbers and trends are plotted.

33-4250

Antarctic Journal of the United States, Vol.14, No.2. U.S. National Science Foundation, Washington, D.C., June 1979, 23p.

Glacier ice, Ice sheets, Ice shelves, Glacier flow.

This issue contains regulations to implement the Antarctic Conservation Act of 1978, a report of geologic and glaciological investigations out of a major field camp on Darwin Glacier, an article on the recovery of 309 meteorites from the antarctic ice sheet in the Allan Hills and Darwin Glacier areas last season, NSF funds awards for Jan. 1 to Mar. 31, 1979, the monthly climate summary, and other special announcements. The regulations establish a permit system for various activities in Antarctica and designate certain mammals and birds and certain geographic areas as requiring special protection, as well as sites of special scientific interest. The regulations are effective as of July 1, 1979. The Darwin Glacier studies focused on sites along and between the Darwin and Byrd Glaciers, which flow from East Antarctica to the Ross Ice Shelf, in an attempt to chart the geologic history of the region and to describe the current glaciological interactions between the ice streams and the Ross Ice Shelf.

33-4251

Introduction of new techniques of controlling construction processes under northern conditions.

[Vnedrenie novoi tekhniki kontrolya stroitel'nogo proizvodstva v usloviakh Severa].

Icebreakers, Ice navigation, Marine transportation, Bubbling.  
The antarctic icebreaker *Almirante Irizar*, ordered by the Argentine Government in 1975, was delivered on Dec. 15, 1978, by Wärtsilä's Helsinki Shipyard. The icebreaker is of a completely new type, designed for supplying the Argentinian research stations in Antarctica. It is capable of wintering in Antarctica with more than 200 persons on board. Different parts of the ship, including machinery, are briefly described. An air bubble system aids the icebreaker to navigate in ice conditions.

Haneda, T.  
Icequakes, Ice sheets, Seismology, Antarctica—Showa Station.  
Three types of icequakes were observed by the tripartite seismological network at Showa Station during the period from Feb. 1976 to Jan. 1977. The types are: (1) shocks with a sharp initial phase (named Type I), (2) shocks with a small or unidentified amplitude of initial phase (named Type II), and (3) swarms. More than 80,000 shocks of Type I and about 80 of Type II occurred through the year. A large number of shocks of Type I occurred in the austral winter season, whereas the number of Type II shocks was larger in summer than in winter. No correlations are identified between the icequake occurrence and the sea level change, and between that and the sea temperature change. The features of icequakes suggest that the shocks of Type II are caused by fractures in the ice near the shelf edge of the ice sheet, giving rise to the calving of icebergs and so on. Swarms are estimated to be caused by the temperature changes. (Auth.)

Meetings, Ice sheets, Ice cover thickness, Radar echoes, Ice composition, Impurities, Ice structure.

The meeting was held at Chamonix, France, on May 13-16, 1978. Reports were presented by delegates of France, Great Britain, the USA, Australia, the USSR and Japan. Main topics discussed included radar echo sounding of the Antarctic ice cover, ice core drilling and thermal drills, geophysical surveying techniques on land, snow surveys and glaciological studies. Recommendations are offered concerning technical improvement of measuring instruments, research trends in their design, modernization of reconnaissance aircraft, and data processing and interpretation.

Sea ice, Ice formation, Frazil ice, Ice structure, Sea water freezing, Supercooled water, Antarctica.  
Frazil ice formation and its effect on ice conditions and polar seas hydrology are discussed. Its development begins with ice appearance on sea surface and continues through the whole winter season, the growth rate fluctuating and reaching its maximum during periods of most intensive tidal currents. Frazil ice thickness was measured up to 4 m beneath fast ice and not exceeding 0.5 m at the ice edge. It is believed that supercooled water areas formed near antarctic shores are responsible for frazil ice development.

Iceberg conewth: international law relating to antarctic iceberg exploitation. (Lundquist, T.R., *Natural resources journal*, Jan. 1977, 17(1), p.1-41, 207 refs. DLC K14.A868  
Water supply, Ice (water storage), Iceberg towing.  
Recent studies have suggested the technological capability, economic feasibility, and environmental acceptability of transporting icebergs to arid regions in both the Southern and Northern Hemispheres. This article seeks to complement these iceberg exploitation proposals by examining the international legal interface with iceberg harvesting and transit. It is suggested that the unresolved legal status of Antarctica casts the largest cloud over entitlement certainty, since different antarctic regimes

would entail differences in the extent of ocean zones and conditions for harvesting icebergs. Other property rights uncertainty springs from the Antarctic Treaty, baseline demarcation, the breadth of the territorial sea (if one applies at all), the custom doctrine, the status of condominium and trusteeships, and problems with the Law of the Sea and the Negotiating Text.

- 33-4365 LANDSAT-derived snow cover as a forecast tool in the Rio Grande basin in Colorado. Shafer, B.A., *Glaciological data*, May 1979, GD-5, p.61-69, 5 refs. LANDSAT, Remote sensing, Snow cover distribution, Snow hydrology, Flood forecasting, Aerial photographs, Snowmelt, Forecasting, Seasonal variations, Runoff, River basins.
- 33-4366 Archiving and mapping of Canadian snow cover data. Findlay, B.F., *Glaciological data*, May 1979, GD-5, p.71-87, 20 refs. Snow cover distribution, Snow accumulation, Snowfall, Data processing, Vegetation factors, Mapping, Canada.
- 33-4367 Accuracy of snow and ice monitoring. Kukla, G., *Glaciological data*, May 1979, GD-5, p.91-97, 8 refs. Snow cover distribution, Ice conditions, Snow depth, Heat balance, Albedo, Mapping, Accuracy.
- 33-4368 Arctic sea ice data set, 1901-1956. Kelly, P.M., *Glaciological data*, May 1979, GD-5, p.101-106, 25 refs. Sea ice distribution, Ice forecasting, Data processing, Meteorological data.
- 33-4369 Inadequacies in archived sea ice data. Dehn, W.S., *Glaciological data*, May 1979, GD-5, p.107-108. Sea ice distribution, Ice conditions, Data processing, Ice forecasting, Ice navigation, Offshore drilling.
- 33-4370 NASA mapping projects (summary). Zwally, H.J., *Glaciological data*, May 1979, GD-5, p.109-111, 2 refs. Sea ice distribution, Ice conditions, Meteorological data, Mapping, Remote sensing, Spacecraft. A mapped brightness temperature data set for the Southern Hemisphere is being converted into a set of sea ice concentration maps. The antarctic maps for sea ice concentration from 1973-76 will be completed during 1979. A preliminary analysis of the variation of the antarctic sea ice limits and open water within the pack for 1973, 1974 and 1975 is presented. Ice extent was less in 1975, but there also appears to have been less open water within the pack ice.

Delaney, A.J.  
Radio waves, Electrical resistivity, Mapping.

"The objectives of the work described in this report were to use and evaluate new radio wave methods of measuring earth resistivity in the LF and VLF bands and to develop estimated effective ground resistivity maps in this same band for the United States, including Alaska. Both airborne and ground methods were investigated by using the wavelit and surface impedance techniques. It is concluded from the VLF study that over much of the central United States VLF airborne resistivity might well approximate LF ground resistivity. The ground methods discussion concerns the surface impedance method in the LF band. It is concluded from the LF studies that the present conductivity map is fairly accurate for BCB purposes but inapplicable to LF purposes.

33-4414

Effect of temperature on the strength of snow-ice.  
Haynes, F.D., *U.S. Army Cold Regions Research and Engineering Laboratory*, Dec 1978, CR 78-27, 25p. ADA-067 583.

Snow strength, Ice strength, Temperature effects, Tensile strength, Compressive strength.

Uniaxial compression and tension tests were conducted on polycrystalline snow-ice to determine the effect of temperature on its strength. Test temperatures ranged from -0.1°C to -54°C. Two machine speeds, 0.847 mm/s and 84.7 mm/s were used for the constant displacement rate tests. The compressive strength at -54°C was about one order of magnitude higher than at -0.1°C. The tensile strength at -18°C was about 20% higher than at -0.1°C. The initial tangent and 50% strength moduli are given for the compression tests, while the secant modulus to failure is given for the tension tests. The mode of fracture is discussed and the test results are compared with data from other investigations.

Analysis of the midwinter temperature regime and snow occurrence in Germany.  
Bilello, M.A., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Sep. 1978, CR 78-21, 56p. ADA-066 934.

Appel, G.C.

Air temperature, Snowfall, Meteorological data, Weather forecasting, Statistical analysis.

This study investigates the possibility of providing estimates of the time of occurrence and length of the freezing season for any location in East and West Germany by using the average January air temperature (AJAT) as an index. The results indicate that reliable values of the mean freezing index can be obtained from the AJAT relationships which are developed for Germany. This association is further verified using data from the northeastern part of the U.S. and the AJAT is then used to determine the average starting and ending dates (and hence the probable length) of the freezing season for stations in Germany. The AJAT and the average dates of snowfall occurrence for numerous locations in the U.S. and Germany are also correlated. Interrelationships between these parameters and the average number of days with snow on the ground for stations up to 3000 m in elevation in Germany are examined.

33-4416

Relationships between static and dynamic characteristics of deformability of frozen and thawed rock in rock samples and undisturbed rock masses.

Voronkov, O.K., et al, *U.S. Army Cold Regions Research and Engineering Laboratory*, Jan. 1979, TL 703, 15p., ADB-033 625L, 7 refs. For Russian original see 33-1717. Distribution limited to U.S. Government agencies only.

Nozdin, G.I., Mikhailovskii, G.V.

Frozen rocks, Foundations, Frozen ground settling.  
In conjunction with the exploitation of the natural resources of the Far North and permafrost regions, as well as the construction of large engineering projects on rock foundations under these conditions, the study of the relationship between static and dynamic characteristics of deformability has become an important and timely problem. The results given here permit a number of practical conclusions to be drawn which will be of value in locating and studying rock foundations in permafrost areas.
